

MEADOWSLEA ANGUS 3RD ANNUAL FEMALE PRODUCTION SALE

**ON FARM FAIRLIE
MAY 1ST 2019 – 12 NOON**

OFFERING:

40 R2yr Stud Angus Heifers
20 R3yr Stud Angus Heifers
16 R4yr Stud Angus Cows

16 Annual Draft Stud Angus Cows
**70 R2yr Meadowslea Bred
Commercial Heifers**

SCIENCE CATCHES UP WITH OLD FASHIONED STOCKMANSHIP!

Scientists working in Epigenetics in human medicine have made discoveries that support the breeding programme at Meadowslea. Recent research has shown that an unborn foetus can activate parts of its DNA in response to the challenges of the environment and that these changes can then be passed on to the next generation.

Meadowslea Stud cows winter on unimproved native country without any supplements. This tough challenging environment for the pregnant cow can alter gene expression in the unborn calf. This sets the calf up to survive and thrive for its lifetime and produce offspring in a similar harsh environment that will do the same.

“Epigenetics goes a long way to explain why our own genetics consistently out perform any so-called “high performance” genetics that have been introduced at Meadowslea. It also helps explain why cattle born at sea level are unlikely do any good in the harder hill country “

- David Giddings

GOOD FAT COVER AND EASY-DOING ABILITY

Meadowslea stud 18mth in calf heifers showing good fat coverings and ready to winter on the hill.

A cow's condition and her ability to lay down fat in times of surplus is a very important trait. Any Angus cow should do this under easy down-country conditions, but to be able to do this on native hill country blocks is a very desirable trait. This rib and rump fat is the cheapest and most efficient energy store on the farm and will determine the fertility of the herd after a hard winter or difficult spring conditions to get cows back in calf.

Meadowslea cows and calves come down off the hill for weaning.

All Meadowslea yearling heifers are mated and any dries culled. After calving these heifers are run in mating mobs together with mixed age cows and expected to get back in calf early, rear a good calf off the tussock, and stay in good order. A tough ask for a 2yr heifer and only the ones that prove they can handle the hill will be retained.

A cow going into winter with good fat coverings carries an energy store on her back equivalent to approximately 2 bales of baleage.

The Meadowslea herd has natural Rib and Rump fat levels amongst the highest in the breed in Australasia – acknowledged as a key trait for fertility in the harsh environment.

THIRD ANNUAL FEMALE PRODUCTION SALE

ON FARM

Meadowslea, State Highway 8, 5km west of Fairlie

10am

Cattle penned ready for inspection - continuous hot morning tea

12 NOON

Sale begins followed by BBQ and Refreshments

CONDITIONS

- 1 The New Zealand Stock & Station Agent's Association Conditions of Sale and, to the extent deemed relevant by PGG Wrightson Limited (PGW), PGW's Terms of Sale apply to this sale. When proceeds are credited or a purchase is debited to a PGW monthly credit account, then PGW's Monthly Account Terms of Trade (as amended from time to time) apply to the extent deemed relevant by PGW. These terms can be inspected at the registration desk and on the wall in the auction room. The current versions of PGW's Terms of Sale and Monthly Account Terms of Trade are also available online at: www.pggwrightson.co.nz/Our-Company/Terms-and-Conditions or in hardcopy on request.
- 2 All intending purchasers must register at the sales office prior to the sale.
- 3 PGW will pay a purchasing rebate of the purchase price excluding GST, plus GST of 6% on stud cattle sold with a stud transfer, and 3% on non-stud transferred cattle, to livestock companies & recognised independent livestock agents with a PGW account who have introduced buyers to PGW before the sale and/or accompanied buyers to the sale.
- 4 All stud cattle will enter the ring for sale in pens of 3 or 4 and purchasers will have the right to the pick of the pen or the lot. The balance of the pen if any will then be re-offered.
- 5 Stud cattle purchased for transfer must be nominated at the fall of the hammer. The minimum transfer price will be \$2500. Any lot purchased for Stud transfer at less than this price will be charged out at the transfer price of \$2500.
- 6 Each Lot becomes the responsibility of the purchaser at the fall of the hammer.
- 7 Transit and Livestock insurance can be arranged by the auctioneers.
- 8 The Sale will be conducted purchase price plus GST.

FOREWORD

Meadowslea Angus Stud was established in 1985 with the purchase of 6 capital stock heifers from the well-known Turihaua stud north of Gisborne. We have steadily expanded ever since to meet strong demand for bulls from the hill-country market we target – our belief is that an animal must first and foremost be suitable for the environment it is run in.

With the lease of a neighboring property over the last 5 years we have taken the opportunity to increase the stud cow numbers further, and this year mated a total of 560 stud females. The demand for our bulls has steadily increased with 170 bulls sold at auction in 2018. Two years ago, with a confident beef industry and the lease block fully stocked, we held our very successful first annual female auction. We now plan to stabilise at 400 stud cows and sell a similar number, and age-group breakdown, every year going forward. The longevity, fertility, constitution, and structural soundness of our female cattle are crucial for us to present the number of females in this catalogue. We have very few dry cows and minimal losses to breakdowns or poor constitution because our cows are the right type to handle their environment. This means fewer replacements are required and more quality surplus females are available to sell.

At Meadowslea all yearling heifers are mated. The decision around which to sell and keep was made in February with relatively limited information on the young female cattle, since we did not yet know how they will perform in the herd. No doubt many of the young females we are offering will turn out to perform as well as or better than some we are keeping ourselves! In recent years as we have increased the stud cow numbers, and with a view to potentially holding a female sale, we identified some potential sale cows and monitored their performance and that of their progeny. Many animals bred from this group are performing at the very highest level. The proportion of their bull calves making the top sale group, and heifer calves going on to themselves be retained, is very similar to that of the balance of the herd.

We offer these females for sale with complete confidence, and in particular the annual draft cows are true capital stock having done up to 10 years on the hill, survived droughts and snowstorms, without ever being fed supplements. We have sold over \$225,000 worth of bulls from this group of 17 cows over their lifetime! This is truly proven performance.

As you read this catalogue it will become clear that the animals that perform the best in our environment are of a similar type – strong rib fat levels drive our programme forward for two reasons. It is strongly linked to fertility, early puberty and the ability to calve early and re-breed early over a lifetime. Secondly, it is the energy store the females use to get through the feed shortages and extended stress periods all too common in this harsh environment.

It is significant that the average rib fat EBV of the animals on offer is +1.55, putting them well within the top 10% for the breed in Australasia.

The other important maternal traits of calving ease, days to calving, scrotal, and milk are generally all at very high levels throughout the catalogue.

High-growth females do not work well in our hill-country environment and you will see few in the catalogue, as over time they have failed to perform and so have dropped out of the herd. All cattle offered have been scanned in-calf by Aorangi Vets Limited. All dry cows are culled at Meadowslea, so to make it to this sale a cow must have calved every year. We individually mate all stud cows, with one bull per mob initially and change bulls over after approximately 30 days. The 169 yearling stud heifers were mated in 5 mobs of around 35 selected on pedigree. Each mob had 2 yearling bulls of the same bloodline, or one two-year-old, changed after a cycle. This resulted in a 96% conception rate. We undertake DNA parentage testing for all stud calves.

This is the third year we have we have offered our stud females to the industry, and almost all sires used are unique in the world to the Meadowslea herd. For stud breeders this is an opportunity to access out-cross bloodlines proven to be highly productive in the hill country, and for commercial clients the option to gain access to genetics that would not be available to purchase as bulls for 3 more years.

From our perspective, the more of these bloodlines that are available in the industry here in NZ, the better the chances are of us being able to source sires that fit our programme; a task that is becoming increasingly difficult

with the NZ Angus genepool now so heavily influenced by genetics sourced from the USA and Australia. Feedlots drive most of the selection criteria for these imported genetics making them, in our experience, totally unsuitable for our NZ grass-fed sustainable hill-country production.

COMMERCIAL HEIFERS ON OFFER

We purchased weaner heifer calves last year from three Mackenzie district stations. Grays Hills, Braemar and Horwell Downs have all been long-term clients since our inaugural bull sale over 20 years ago and have always bought very good Meadowslea bulls. All three properties retain only enough heifer calves for their own replacements and sell the balance at the weaner fairs. We have mated these heifers to easy-calving yearling bulls. They will make great cows and their progeny will carry all the genes required for sustainable and efficient hill country production.

Mating dates: **Stud Heifers** November 20th **Commercial heifers** November 28th **Cows** December 11th

We wish you well with your purchases and will follow your progress with a keen interest.

Regards,

David Giddings

Comments: Purchased in 2014 from the Ratanui stud in Gisborne, Lad is a trait leader for calving ease and has low birthweight and short gestation in the top 10%. His rib and rump fats are in the top 5% for the breed. His sire Turihaua Crumble is also the sire of Turihaua Crump who of course has bred so well for us. He continues the exceptional depth, thickness, and easy-doing ability we expect of this lineage and his progeny are very square, sound, well balanced types. He has a number of daughters in the sale that are very suitable to harder hill country.

SPECIALISTS IN GENETICS PERFORMANCE

PGG Wrightson Genetics is a nationwide team of livestock breeding professionals, passionate about improving farm productivity through genetics.

- Ability to source a huge variety of different genetics to suit any farm or production requirements
- Backed by the largest livestock network in New Zealand
- Up-to-date with the latest innovations in livestock breeding
- Relevant knowledge, advice and support
- Achieve top results at live auction sales with our National Auctioneering team
- Understanding of your farming business
- Committed to helping you achieve your production goals

Comments: The top Goldwyn bull of his year and purchased for \$13,000. A son of the widely-used Te Mania Infinity, he is passing on good fertility traits with strong scrotal size, positive fats, low birthweight and good IMF figures. His daughters are very fertile resulting in him becoming a trait leader for short days-to-calving. He has several good daughters on offer and was also used as a mating sire to follow up a lot of the cows in this sale.

Comments: He was retained in 2015 to ensure we maintain some Meadowslea 159 blood in the herd. Meadowslea 159 is still a trait leader for scrotal size and short days-to-calving, two of the most important fertility traits on Breedplan. His daughters are consequently some of the most productive in the herd as can be seen in the annual draft cows. J479 also has strong fertility EBVs and is a trait leader for scrotal size as well. A larger-framed bull but still with tremendous depth of body and sound feet and legs. He has some very good daughters in the sale.

Comments: We retained this bull in the stud in 2016. His sire is Meadowslea J514, an F540 son sold for stud to Earnscleugh Station for \$17,000 in 2015. L226 is out of a top young Turihaua Crump heifer who also produced the M452 bull sold in last years bull sale to Peak Hill Station at \$17000 and is also a reference sire in this catalogue. L226 has exceptional calving ease in the top 5% for the breed, plus short gestation and low birthweight. He has good scrotal with a top milk figure - all combining to give good index figures. His first sale progeny look to be impressive medium-framed meaty types.

Comments: Retained in the stud in 2016, he is a top Turihaua Crump son, out of a cow by our old herd sire Meadowslea 70 (who is the grandsire of F540). A deep, thick, easy-doing bull with very strong scrotal and fat EBVs once again. This year his first crop of progeny are for sale and he has some very good sons in the winter sale line-up. They exhibit the same thickness and top hindquarter, and have very strong coats ideal for the harsher climate.

BREEDPLAN INDEXES			
SR	+\$140	AP	+\$126

Comments: This son of G914 is out of a top Turihaua Crump heifer so is bred to be thick as a brick. He was used as a yearling in 2015 and sold to Nimrod Downs in the 2016 bull sale. He has maternal and fertility traits that are exceptional, with calving ease, low birthweight, scrotal size, and short days-to-calving all in the top 10 %. Meanwhile his rib and rump fat EBVs are off the scale. His progeny have scanned so well his EMA has jumped from +2 to +7.1 and this has pushed his self-replacing index to \$140 recognising the importance of these strong maternal and fertility traits to a commercial beef operation. We believe any high country farmer - and his bank manager - would love to have a herd of cows like this! He features as a sire and mating sire in the catalogue.

Comments: Purchased in 2016, we have the first of his progeny coming forward for sale this year. He was selected for his volume and capacity with an outstanding hindquarter, and his progeny strongly reflect this. He is leaving very good EMA with strong rib and rump fats, and his progeny exhibit real depth and volume. He has bred some standout sons for our upcoming June sale, including N141 who was used to mate cows in the first cycle, before Turiroa himself followed him in the 2nd cycle.

Comments: This is the bull we have named the Meat Machine! We now have over 130 progeny and he is having a huge impact in the herd. He leaves terrific thickness and depth with great hindquarters, and that easy-doing ability we value so strongly showing in his exceptional rib and rump fats which are in the top 1% for the breed. He is a trait leader for calving ease and has low birthweight with good scrotal size and short days-to-calving. We believe he is the true Angus hill-country type.

Comments: This top son of the Rangatira 13-38 (the \$100,000 bull) was sold at lot 10 in the winter sale to Peak Hill Station for \$17,000. He has a very good pedigree, being out of a top Crump cow who is also the mother of the stud sire L226. We have retained a share in this bull and have mated some very good cows to him. He is very powerful with tremendous depth and thickness, and real volume and capacity. He has very strong growth and we are very excited to see the first of his progeny.

Comments: Retained in the stud in 2018, M564 is a son of F540 and out of a great cow by Glanworth 16. We selected him to use as a yearling after he had scanned with the biggest EMA ever recorded in the stud. He has wonderful fertility and maternal traits with calving ease and moderate birth weight, followed by very good growth and scrotal size. His milk, days-to-calving and both rib and rump fat are all in the top 10% for the breed. A moderate-framed, easy-doing type who we mated first with the R2-year stud heifers and then with a top selection of mixed age cows.

Comments: Purchased in 2018, Nugget is a son of the Mangapapa Scotty bull who is breeding very well. We selected him for his exceptional easy-doing ability with his rib and rump figures in the top 1% for the breed. He has exceptional depth of hindquarter with soft fleshing and wonderful structural soundness. We think he should fit well into our breeding programme.

Comments: Purchased at the Rangatira sale in 2018, this bull was selected for his strength, bone, head and quality. He has a very good hindquarter with strong rib and rump fats and a very good scrotal. He combines many of the older bloodlines at Rangatira and Kaharau, that feature many of the traits lost to the modern Angus. We have mated him to some very good cows in this sale, as well as many of our own top retained cows, and look forward to his progeny arriving.

Comments: We rate this outstanding yearling as possibly the best Turihaua Crump son ever. He is out of a top-performing Glanworth 16 cow who bred our top price bull last year- M429, sold to Red Oak Stud for \$18,000. She has bred other top sons sold at \$11,500 and \$9,500. N166 was selected to mate stud cows for his outstanding depth and thickness, combined with his strong growth, good muscle and his easy-doing traits of rib and rump fats in the top 10% for the breed. He is a standout and is likely be retained in the stud.

Comments: This son of Turiroa 14-830 is a different dimension in thickness with a pedigree to match. He is double-bred to Braveheart of Stern and out of a cow by Meadowslea G914 (the Meat Machine). He scanned with the 2nd biggest EMA out of 190 bulls, and his 400 day was the 4th heaviest. We selected him to use over stud cows and with the figures and strength he possesses, we think he will create a lot of interest if we decide to sell him.

Comments: This bull is a son of K904 who we used as a yearling and then sold to Robin Jameson for \$9,500. He bred exceptionally well and his 3 sons in the 2018 sale averaged \$13,000. We used him again in the AI programme to breed N119 out of the great cow E0350, who is the top annual draft cow in this sale at lot 77. His Grandam is the great old cow C914 who bred retained keeper H202. N119 is a beautifully sound bull with wonderful hind-quarter. He has tremendous scrotal size and rib and rump fats in the top 5% for the breed, and scanned with the third-best marbling out of 190 bulls.

Comments: This son of L226 is a very impressive bull. We used him over stud heifers in the second cycle after M564 was taken out to mate adult cows. He has a great set of data for mating heifers with good calving ease and low birth weight, followed by good growth, with short days-to-calving and good milk figures - all combining for a good Self Replacing Index. A lovely deep bodied-bull with easy fleshing.

Comments: This K703 son is out of a granddaughter of F540, and as you would expect has great figures. He was used in the first cycle over the stud heifers (together with N431). He scanned with the best EMA out of all 190 bulls, with very good fats and the 5th best marbling. He has calving ease with good scrotal size and his short days-to-calving, rib fat and rump fat are in the top 2% for the breed. Another deep, thick, easy doing hill-country type.

Comments: This G914 son was used in the first cycle over stud heifers (together with N146). He has strong fertility traits with good calving ease, low birth weight and has the important short days-to-calving and rib and rump fats in the top 2% for the breed once again. Another deep-bodied easy-doing type typical of the G914 sons.

Comments: This son of KayJay Crampon was used over stud heifers to follow Ratanui Nugget. He has terrific calving ease - in the top 10% for the breed - with a low birth weight, good scrotal, and rib and rump fats in the top 5% for the breed. A very sound bull who is an ideal type for hill-country.

Weigh scale revolutionizing Angus breeder's operation

David Giddings' family has been farming the high country in Fairlie since 1926. "We've been here forever", he says. Their Romney stud was established in 1926 and David established the Angus stud in 1985. Today their operation extends to 700ha with a total of 10,000 stock units comprising 500 Angus stud cows and 2,000 stud ewes.

Garnering a reputation in the industry as a top high country stock breeder, David says his success has in part been the result of identifying and incorporating the right technology into his operation. Technology that gives him information at his fingertips.

The latest 'gadget' is Tru-Test's XR5000 weigh scale.

Weighing and using the data to manage their sheep has been part of their farming practice for a long time.

Getting access to the equivalent cattle information however, is new to their operation.

"We were having to do all this EID work with sending our animals away and so upgraded our weighing and tracking kit to Tru-Test's XR5000 and XRS Stick Reader when we upgraded our yards," explains David.

"We had been looking to get some kind of hand held device which would give us information on the cattle and be compatible with the Angus breed

programme, HerdMaster."

Someone suggested to David that the XR5000 would do a lot of what they wanted.

"And it can! It's an unbelievable piece of kit."

"For cattle breeders not using this equipment, I am sure if they did and had the same information we now do, they would make different decisions on their breeding programmes. Decisions like which bull you put with which cow or if you sell it."

"We just carry it around with us now and it's got all this data on it. The memory capacity is phenomenal."

"You can see an animal, type their number in, and up comes all the information we want. Like what calf it

David Giddings

had this year, how heavy the calf was, who she's mated to, when she's in calf - early, late - just all that information."

"So, as well as weighing, the EID and the NAIT stuff, it's main use for us is doing the job of something like a tablet."

For David, it has changed what they can do as they now have so much information at their fingertips in the yard.

"We can just walk along with the stick reader on a race of cattle and we'll know which ones are pregnant, which ones calved to one particular bull etc. Basically, anything you want to find out about a particular animal, which is pretty amazing."

"It's revolutionized our operation, particularly with the likes of our first cow sale which we've just had".

“The XR5000 enabled us to track all our cows and progeny coming up to the sale. Whether these cows were going in the sale or whether they weren’t. We could also tell types of cows, number, and knew who each had been mated to, first time and second time. We knew what calves each had, how heavy they were and who that calf was by, and how heavy that calf was.”

“Quite simply, we couldn’t have done it without that piece of kit as we couldn’t have carried all that info with us, and certainly couldn’t have done it all in time”.

Their first auction went well with a new NZ record price set.

“Once you’ve loaded all the information in it can just tell you what you want to know, and it’s telling that all on one screen, and all at the same time. So you can make the right decisions”.

“There’s nothing else around that can do that!”

“You don’t have to go back to the house or the office or look at bits of paper or through a pile of books.”

You just get it all programmed in there and just go!

“We’ve also been using it to mother up all the calves. We would have a group of cows and then want to find their calves. We would just go through the list of calves and up popped all the ones we needed. It meant we could go out and put them back with their mother in a completely different mob to where they were”.

They have also used it for mating their cows.

“When the first cow is in front of us we would have all her information on screen. We also have a pop up screen with 9 different sires on it. We would select one and that would be her mate. The next time she comes in the yard we will have all her previous mates, including what we did the last time. We can then choose to change her to a new mate if we want. We’ve got a record of all that.”

“It just does away with thousands of bits of paper.”

“You’re also making decisions on all that info, not just part, which you would normally have done in the past. As a result, the accuracy of those decisions will be far better.”

“For cattle breeders not using this equipment, I am sure if they did and had the same information we now do, they would make different decisions on their breeding programmes. Decisions like which bull you put with which cow or if you sell it.”

“If more breeders use this equipment as a decision-making tool, well it’s going to increase the performance of Angus herds across New Zealand.”

David is currently looking at getting a cow’s lifetime data on the XR5000.

“We’ll have the data right from calves she’s ever had, what the weighting of

Comments: To lead this sale we have a classic Turihaua Crump heifer out of an F540 daughter - the cross that keeps breeding us great cattle. She has a great wide top, a good coat, and easy-doing quality. Her dam H102 bred a top son we used in the stud and sold to Overtons last year at \$9,500. N285 has performed very well with good growth, she was 4th heaviest at scanning when she also had the 4th biggest EMA and 2nd-top marbling figure at 7.5. Mated to the new Ratanui Nugget bull then the yearlings N381 and N298.

Comments: An F540 daughter out of a Crump granddaughter - these bloodlines cross just as well the other way around! N432 is a good thick type and scanned well with very large EMA and a good marbling figure of 6.8. She has all the maternal and fertility traits you would expect of an F540 with milk, DTC, and fats all in the top 10% of breed. Mated to Ratanui Nugget followed by N381 and N298.

Comments: A well-bred heifer here with plenty of growth ranking her second for 400 day weight. Sire K890 was later sold for stud to Glen R Angus. Her dam is breeding well with a top son sold to Mt Gerald Station at \$10,000. She is big, strong and powerful, and also scanned well with good EMA, strong fats, and a top marbling of 7.4. Mated to the K703 sons N157 and N431, followed by N362 and N368.

Comments: By a very good Crump yearling who was sold to Matt Mackenzie for \$9,500 where he continues to do very well, and out of a great old cow who is lot 91 in this catalogue. N101 is easy-doing, thick and clean-cut. She has great fertility traits with calving ease, low birth weight, DTC, scrotal size and fat EBVs all in the top 10% of the breed. She scanned very well with the top EMA in the group. Mated to Ratanui Nugget followed by N381 and N298.

Comments: Leading off this next pen, this daughter of a 2-year Crump heifer is typical of that bloodline and shows real potential. Sired by a good Matauri Reality son who was later sold to Linnburn Station for \$11,000 where he has done very well. Grandam D101 is also in this sale at lot 81 and is the mother of our top stud sire G914 (the Meat Machine). Very good fertility traits with calving ease, low birthweight, DTC, and fats all in the top 10% for the breed. Scanned with the top rib fat in the group. In-calf to the top yearling N465 followed by N361.

Comments: Exceptional fertility traits in this Matauri Reality granddaughter. Out of a 2-year heifer who goes back to F540, her maternal grandam was the top price cow in our inaugural female sale, sold to Linnburn Station for \$5000. Great calving ease, DTC and rib and rump fat figures, she also scanned with a marbling figure of 7.2. Mated to the Goldwyn 17 son N465, followed by N361.

PRICE: \$

The Meadowslea hill-country type

Visual appraisal is still very important for selecting cattle to perform in hill - country

MASCULINE TRAITS - A strong head and jaw and thick neck indicate high levels of libido, testosterone and reproduction efficiency

NECK LENGTH - A thicker necked animal matures and reaches puberty earlier and has more libido

A longer neck indicates a higher maintenance animal that is slower to reach puberty and re-breed

HEART GIRTH - Large heart girth is an indicator of vigor and easy keeping ability

Small heart girth animals are more susceptible to stress, are higher maintenance and do not perform well on tussock

RIB FAT - Strong rib fat covers are the essential energy store for adverse conditions.

They indicate easy-doing and finishing ability and are directly related to increased fertility in both heifers and cows.

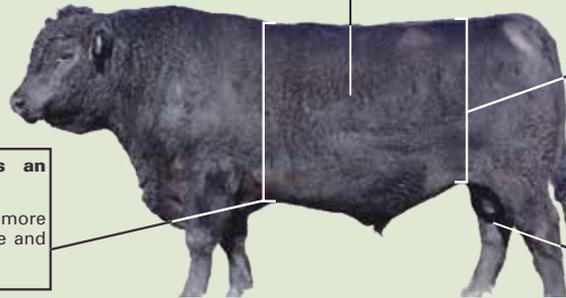

STRUCTURAL SOUNDNESS, FEET AND BONE - High country cattle cover large distances over rugged terrain so a strong skeleton is essential

HIDE - a good thick skin and coat is essential in the cold harsh environment

FLANK - Deep flanked animals are easier keeping, have more meat in the rump and have more maternal and reproductive efficiency

Higher flanked animals tend to be flighty, are higher maintenance and take longer to finish on grass

SCROTAL SIZE - Larger scrotal size at 12 months indicates daughters will reach puberty earlier, be more fertile, and re-breed early every year.

BRED FOR THE HILL COUNTRY

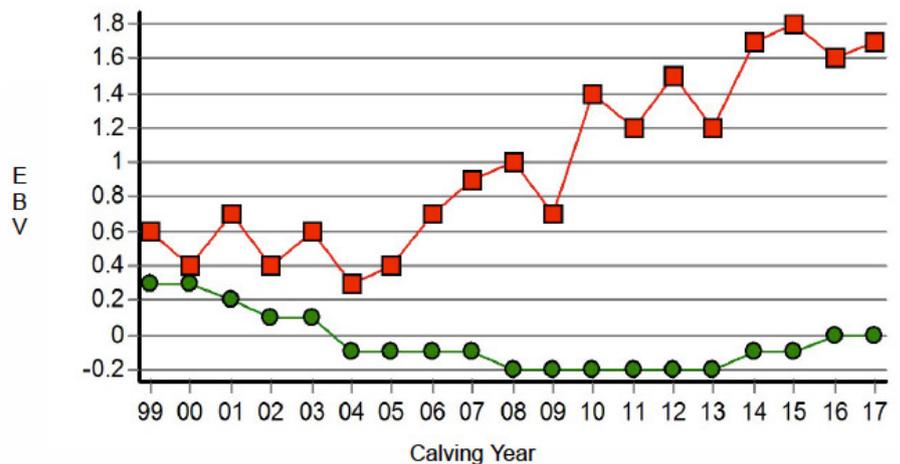

The development of the Meadowslea hill - country type has been the result of 25 years of selecting animals that perform the best in our hash hill country environment. Cows that can winter easily on the hill without supplements, stay in good order, calve easily and get back in calf early every year for 10 years has been the focus of our breeding programme. By putting pressure on cows to winter on native hill blocks it quickly became apparent that some animals could manage well in this environment and would easily get back in calf the next year, while those that struggled would be too light going to the bull, and either calve later each year, or come through dry.

Those that were dry or were not holding their condition well enough were removed from the stud herd, while the "easy-doing" types thrived and passed their genetics on to the next generation. It was clear that it was the cows with good fat covers going in to the winter that were consistently performing the best in our environment.

Ultrasound scanning is performed on all yearling bulls in early spring, and on the heifers in the autumn. For us, the most important data is the rib and rump fat cover measurement - we have found these strongly correlate with those easy doing characteristics, and we now put a lot of emphasis on this when selecting bulls to use and heifers to retain. This is reflected in Meadowslea having some of the highest fat EBVs on the Australasian Angus BreedPlan system.

These great positive fat EBVs in the Meadowslea herd have come about simply by selecting animals that suit the hill country environment.

Carcase Rib Fat (mm)

Graph showing improvement in fat EBVs at Meadowslea while running the herd on hill country, compared with Australasian average. From Angus Breedplan report March 2019.

■ Meadowslea herd
● Australasian herd average

The average rib fat EBV of the females in this catalogue ranks in the top 10% for the breed in Australasia.

Comments: Well bred Waiterenui J144 heifer here, deep and strong with a good head and bone. Dam J600 bred a stud bull L179, who was sold as a yearling to Red Oak Stud and is the sire of some of their top sale bulls this year. She has also bred a very good bull in this year's sale line up, N474. M1065 has a nice balance of figures, with calving ease, low birthweight, good growth and strong fats. A great mate for G914, followed up by his son K703.

50%	37%	54%	52%	61%	59%	53%	52%

Comments: A smooth-skinned, maternal looking cow with some balance and style. Sired by a Crump grandson out of a F540 daughter. Good performance with the top 400-day in her group and the biggest EMA, highest rib fat and 2nd best actual marbling at 5.9. She has just weaned a very good calf to boot. Great figures across the board with scrotal size, DTC and fats in the top 10% of the breed. Mated to Rangatira 209 followed by Turiroa 14-830.

Comments: A well bred heifer here by F540, out of a top Crump cow who bred stud bull L141, sold to Linnburn Station for \$11,000. Grandam is also in this sale at lot 87. A typical F540, deep and moderate-framed with super figures- she ranks in the top 10% for all 8 fertility and maternal traits! Mated to Rangitira 209 and followed up by Turiroa 14-830.

Comments: A thick, deep, easy-doing G914 daughter with a great back end. She also has good fertility and maternal traits with calving ease, low birth weight and short days to calving which together with a good scrotal size EBV and strong fats make a great hill country set of figures. Real thickness and easy-doing in this pedigree with Glanworth 16 on both sides. Mated to the top Crump yearling N166, followed by K811.

Comments: First up in this age-group we have a classic F540 daughter bred out of a Crump cow - always such a great cross! This young cow is deep-bodied and easy-doing with great fertility and maternal traits, all in the top 20% for the Angus breed. She also scanned well for muscle, fats, and marbling. Mated to K703 followed by 2 of his sons.

Comments: Another classic F540 daughter very similar to the last, again with a great set of data. Top 10% of breed for the important fertility traits - milk, DTC, Scrotal and Rib and Rump fat. Out of a very good cow breeding a stud bull to Glanworth \$11000. Mated to Turihaua Crump followed by his son K811, which should be a great cross.

Comments: A Goldwyn 17 daughter out of a good Glanworth 16 cow who has bred a top sale bull to sold to Robin Jameson. Strong fertility traits here again with days to calving, scrotal size and fats all in the 10% of the breed. A lovely easy-doing, moderate-framed young cow. Mated to Turihaua Crump followed by his son K811.

61%	55%	62%	61%	67%	65%	61%	60%

Comments: A very productive daughter of F540 out of a Crump cow - the top pedigree at Meadowslea. Scanned very well being 2nd-top for EMA, rib fat and marbling. Exceptional numbers for all the maternal and fertility traits. Impressive weaning weights of her calves have given her this great milk figure, Mated to Rangatira 209 followed by Turiroa 14-830.

Comments: A daughter of Matauri Reality and out of a great old cow D0248. L132 is bigger-framed with length and has great carcass data - she scanned 3rd best for EMA and fats, and 4th best for marbling in her group. Her EBVs show exceptional calving ease and rib and rump fat in the top 10% for the breed. She weaned a good calf this year. Mated to M452 - son of the \$100,000 Rangatira 13-38 bull, followed by L226.

Comments: Another daughter of J514 who was sold to Earnsclough Station at \$17,000. Her mother was the great old cow D0056 who bred very well and was sold to Linnburn Station at top price of \$5000 in our first female sale. Exceptional numbers for all the fertility traits with great calving ease, low birthweight, strong milk, scrotal, and DTC. She scanned with very good fats and marbling. Mated to M452, the Rangatira 13-38 son who we sold to Peak Hill at \$17,000 and retained a share in, followed by L226.

Comments: A top breeding cow here to lead off the annual draft offering. E0350 is the mother of one of this year's standout sale bulls N119, who we used as a yearling over stud cows. She has also bred a top son sold to Glenquoich Station at \$9000 and another at \$6200, and has had 3 top daughters retained. Her Dam C914 is one of the greatest cows we have bred and the mother of N270 - the top F540 yearling bull used over stud cows this year, and H202 - a stud sire retained. Terrific figures for an old cow with a very good EMA. This is a very good breeding family and we expect an exceptional calf from the AI mate to Taimate Lazarus. AI was followed up by Turihaua Loyalty.

Comments: A top-breeding Yelet cow who had a son sold at \$14,000 to Mt Gerald Station, and others to Mt View, Grampians Station, and a yearling stud bull to Linton Palmer. These Yelet cows have been outstanding breeders in the herd (Meadowslea F540 is out of a Yelet Cow). A lovely medium-framed, compact cow. Great fertility figures once again with milk, scrotal, DTC and fats all very strong. Mated to Turihaua Crump himself, followed by his son K811.

Comments: A top old cow here breeding very well, including a stud bull sold to Puke-Nui Angus and other sons to Mt View at \$8,500 and Glen Islay at \$9,000. By the great old Meadowslea 70 sire, she has calving ease with milk, scrotal size and fats all at the top end of the breed. She has weaned a series of terrific calves - which is reflected in her outstanding milk EBV of +22. An exciting mate here to F540 bloodlines - our top keeper bull last year Meadowslea M564, followed up by L226.

Comments: A clean cut Piko Burn Char daughter who has had sons sold at \$8500 to Annandale Station and Horwell Downs, as well as 2 daughters retained. Strong scrotal and fat figures once again. Mated by AI to L106 - a top bull sold two years ago to Peak Hill Station. AI was followed up by Turihaua Loyalty.

Comments: A real gutsy old cow by the great old sire Meadowslea 70. 10 calves in 10 years including 2 sale bulls and a very good prospect for this years bull sale, plus 2 daughters retained. She always weans top calves and this year's is her heaviest ever. Great mate to F540, followed up by his two top sons N270 and N214.

LOOKING FOR PROVEN HILL COUNTRY ANGUS?

Buy from the specialists!

MEADOWSLEA ANGUS

The Meadowslea hill-country type

Visual appraisal is still very important for selecting cattle to perform in hill - country

MASCULINE TRAITS - A strong head and jaw and thick neck indicate high levels of libido, testosterone and reproduction efficiency

NECK LENGTH - A thicker necked animal matures and reaches puberty earlier and has more libido

A longer neck indicates a higher maintenance animal that is slower to reach puberty and re-breed

HEART GIRTH - Large heart girth is an indicator of vigor and easy keeping ability

Small heart girth animals are more susceptible to stress, are higher maintenance and do not perform well on tussock

RIB FAT - Strong rib fat covers are the essential energy store for adverse conditions.

They indicate easy-doing and finishing ability and are directly related to increased fertility in both heifers and cows.

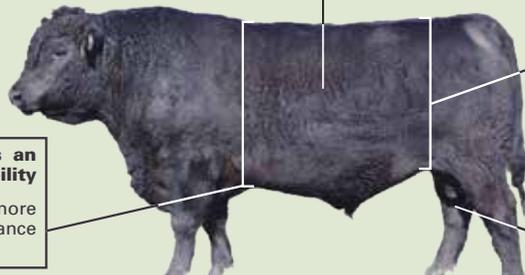

STRUCTURAL SOUNDNESS, FEET AND BONE - High country cattle cover large distances over rugged terrain so a strong skeleton is essential

HIDE - a good thick skin and coat is essential in the cold harsh environment

FLANK - Deep flanked animals are easier keeping, have more meat in the rump and have more maternal and reproductive efficiency

Higher flanked animals tend to be flighty, are higher maintenance and take longer to finish on grass

SCROTAL SIZE - Larger scrotal size at 12 months indicates daughters will reach puberty earlier, be more fertile, and re-breed early every year.

DAVID GIDDINGS

**70 HILL-COUNTRY BULLS SELL
Friday June 21, 2019
on farm - Fairlie**

Our 2 proven senior sires, now aged 9 and 10, exhibit all the soundness and longevity so important in hill - country cattle. Both are trait leaders for 'Days to Calving' - the key indicator of fertility in hill country.

MEADOWSLEA F540 - Deep, thick, easy-doing sire with exceptional production figures for hill country. He ranks in the top 10% of the breed for the important maternal and fertility traits of 'low birth weight', 'short gestation', 'scrotal size' and 'rib' and 'rump fat'. He is also a trait leader for 'milk', 'calving ease' and 'days to calving' figures!

TURIHAUA CRUMP E5 Traditional NZ Angus hill country type. He has sired over 350 outstanding progeny which are always highly sought after. His daughters are proving exceptionally fertile and productive in our hill country, resulting in him now being a trait leader for 'days to calving'.

80 Stud R2, R3, R4, and
Annual Draft Capital Stock Cows

Approx. 70 Commercial R2
Heifers
(Meadowslea bred)

RISING 2YR MEADOWSLEA BRED COMMERCIAL HEIFERS

We were thrilled to be able to purchase top-quality lines of heifer calves from long-term High Country clients at the 2018 Mackenzie Basin calf sale in Temuka. These have been wintered under the Meadowslea system and mated to stud low-birthweight Meadowslea yearling bulls. Out of the entire group all but three were in calf after 2 ½ cycles. We have selected 4 lines we believe will go on to be top-quality breeding cows and have these offered for sale. They represent a rare opportunity to purchase genuine High Country Angus genetics.

LOT 94 – approx. 12 Commercial R2 heifers – ex Grays Hills Station

Grays Hills Station is in the heart of the harsh Mackenzie Basin. Angus cows have run at Grays Hills for many decades, and the runholders – the Urquart family – have been using Meadowslea bulls for over 25 years. Grays Hills run 300 Angus cows and 50 replacements, together with a large Merino operation – 6200 ewes, 4500 wethers and 2000 hoggets, across an expanse of 21,700 Ha of the semi-arid Mackenzie basin. Summers can be blisteringly hot and dry, with winters equally harsh, and the Angus cows spend a large part of the year subsisting on their fat reserves. Annual rainfall never exceeds 400mm.

Purchaser:	PRICE: \$
------------	-----------

LOT 95 – approx. 18 commercial R2 heifers - ex Braemar Station

Braemar Station lies on the eastern shore of Lake Pukaki, near Mt Cook in the Mackenzie country. This is a harsh, high-altitude alpine environment where the growing season is short and hard winters with heavy snowfalls are common. Hamish and Julia Mackenzie run 300 Angus cows and 60 replacement heifers, alongside 5000 Perendale ewes and a deer unit. Hamish's father Duncan began buying Meadowslea bulls in the early days of the stud before we even sold at auction.

Purchaser:	PRICE: \$

LOT 96 – approx. 18 commercial R2 heifers – ex Braemar Station

Purchaser:	PRICE: \$
------------	-----------

LOT 97 – approx. 22 commercial R2 heifers – ex Horwell Downs

Horwell Downs is located close to our Berridale hill block, between Kimbell and Burke's Pass. It covers 2400 Ha, running up to the summit of the Two Thumb Range at 5,000 ft near the Mt Dobson skifield – in fact the skifield access road goes through the bull paddock. The 260 predominantly Angus cows are expected to thrive on this country year-round, together with 50 replacement heifers and 3250 composite ewes. Andrew (Buster) Hurst actually used to work for us at Meadowslea, and his family have been buying Meadowslea bulls for a long time.

FMG
Advice & Insurance

NOTES

Exclusive Bull Cover

What is Exclusive Bull cover?

FMG has partnered with Angus NZ to offer comprehensive insurance cover from the fall of the hammer with this vendor. All bulls auctioned at this exclusive Angus NZ and FMG sale up to the value of \$50,000 will automatically be covered under FMG's Exclusive Bull cover for 14 days at no cost to the purchaser.

Length of cover

To extend cover for the specified bull beyond 14 days you need to tick Exclusive Bull cover 12 months on the Purchaser Instruction and Insurance Slip in this catalogue. The specified bull is then covered for the remaining period of 12 months. The premium is payable to FMG and is in addition to the purchase price of the bull.

If you require an alternative cover period talk to an FMG representative.

Your bull's value

Any bull covered under this policy must be purchased for \$50,000 or less.

For any bull purchased over \$50,000 talk to an FMG representative.

During the period of insurance, the specified animal is covered for:

- Death or infertility as a result of accident, disease or illness.
- Transit.
- Theft.

What we will pay

Fair market value of your specified bull, less any amount you receive for the sale of the carcass, up to the amount shown on the insurance certificate.

Disclaimer

Please note this is only a summary of the product and is subject to our specific product documentation. For full details, you should refer to the policy document. You can get these documents, and any other information you need, from your FMG representative, by calling us or visiting our website.

PROVEN TO PERFORM IN A TOUGH TESTING GROUND

Meadowslea stud cows live in a different world to most Angus Stud cows in NZ, and have naturally developed into a type that thrives in their environment. Moderate framed cows that have deep wide bodies and carry good fat covers are proven to be the most productive in this country. The use of strong NZ bloodlines ensures this suitability for the environment will continue.

Widespread use of imported bulls from different environments, or genetics sourced from grain fed systems, have no place in the Meadowslea breeding programme.

It is no surprise then that Meadowslea bulls shift and perform for clients in hill country throughout NZ.

PROVEN WHERE IT COUNTS!

The Mackenzie Basin Calf Sale in Temuka is the largest sale of Angus and Angus-Cross calves in the South Island.

It is the best day of the year for Meadowslea Angus – watching our clients' calves come through the ring. This year there were almost 1150 calves from our clients' properties and they were in strong demand, making a significant premium compared with other

sales, with a number of pens making up to \$4/kg. A big congratulations to all our clients for a marvellous line of Angus and Angus-cross calves, all displaying those easy-doing and fleshy attributes that our genetics are noted for.

Top price on the day was \$1100/head to long-standing Meadowslea client Grampians Station for a pen of Angus x Hereford cross steers.

Manager Grampians Stn

Our 2 proven senior sires, now aged 9 and 10, exhibit all the soundness and longevity so important in hill- country cattle.

**Both are trait leaders for 'Days to Calving'
- the key indicator of fertility in hill country. They both have daughters and are used as mating sires in this catalogue.**

MEADOWSLEA F540 – Deep, thick, easy-doing sire with exceptional production figures for hill country. He ranks in the top 10% of the breed for the important maternal and fertility traits of 'low birth weight', 'short gestation', 'scrotal size' and 'rib' and 'rump fat'. He is also a trait leader for 'milk', 'calving ease' and 'days to calving' figures!

TURHAUA CRUMP E5 – Traditional NZ Angus hill country type. He has sired over 300 outstanding progeny which are always highly sought after. His daughters are proving exceptionally fertile and productive in our hill country, resulting in him now being a trait leader for 'days to calving' at -9.6.
