

MEADOWSLEA ANGUS 6TH ANNUAL FEMALE PRODUCTION SALE

**ON-LINE AND ON-FARM
MAY 4TH 2022 – 1PM**

www.meadowslea.co.nz

MEADOWSLEA
ANGUS & SHEEP GENETICS

OFFERING:

56 R2yr Stud Angus Heifers

20 R3yr Stud Angus Heifers

20 R4yr Stud Angus Cows

20 10yr old Capital Stock Angus Cows

FERTILITY AND MATERNAL TRAITS the key to profitability in any herd!

Meadowslea stud cows winter on unimproved native tussock blocks without supplements being fed. This challenging environment tests the ability of the pregnant cow to maintain condition through periods of winter feed shortages. It is the energy stored in her rib fat levels that enable her to survive, thrive, and ultimately get back in calf and rebreed each year.

Days to calving is a crucial fertility trait that measures the number of days from when the bull is let into the mob until the cow calves. This identifies cow families that calve early every year. Those earlier calves will always be heavier at weaning, and selecting for short Days to Calving will reduce later born calves and allow higher conception rates in a shorter mating period.

"At Meadowslea we have always had some of the highest rib fat levels in the Angus breed. The importance of these fat levels is now recognised with our cattle now having some of the shortest days to calving EBVs in Australasia."

David Giddings

GOOD FAT COVER AND EASY-DOING ABILITY

Meadowslea stud 18mth in-calf heifers showing good fat coverings and ready to winter on the hill.

A cow's condition and her ability to lay down fat in times of surplus, and to draw on that fat as an energy source in times of feed deficit is vitally important. This rib and rump fat is the cheapest and most efficient energy store on the farm, and will determine the ability of the herd to get back in-calf and rebreed early after a hard winter or difficult spring.

Meadowslea cows and calves come down off the hill for weaning.

All Meadowslea yearling heifers are mated and any dries culled. After calving these heifers are run in mating mobs together with mixed age cows and expected to get back in calf early, rear a good calf off the tussock, and stay in good order. This is a tough ask for a first-calver, but this year that age-group scanned with a terrific 97% back in-calf rate!

A cow going into winter with good fat coverings carries an energy store on her back equivalent to approximately 2 bales of baleage.

The Meadowslea herd has natural rib and rump fat levels amongst the highest in the breed in Australasia – acknowledged as a key trait for fertility in the harsh environment.

Meadowslea Sixth Annual Female Production Sale

ON-LINE AND ON-FARM

State Highway 8, 23 Trotters Road, Fairlie
5km west of Fairlie

ON-LINE BIDDING OPENS

HELMSMAN STYLE AUCTION

Wednesday 4th May - 1.00pm

Sale Format

The sale will be conducted as a Helmsman-style auction, meaning that all lots are for sale simultaneously. This is to allow for the participation of those in attendance, as well as those online. The sale will be hosted on our own **yourbid** platform and accessed through our website www.meadowslea.co.nz. Prior to the sale, all lots will be filmed and available for viewing up until sale day on the Meadowslea website.

The cattle are available for viewing in the paddock anytime

– just call 0272299760 to arrange a time.

Registration for those in attendance will be at the on-farm office, where a copy of the conditions of sale will be posted.

Registration for those online will be through the Meadowslea website, where the conditions of sale will also be available.

Buyers will receive a buyer number as they register which will accompany each bid. Buyers registering online will receive a buyer number in their email which will automatically accompany each bid they place, whether they do so at home on their computer, or through their smart phone while in attendance. Those in attendance may also bid by writing on the supplied bidding cards and handing them in to the auctioneers. All live bids and all lots will be visible at all times, both online and on a big screen on-farm.

Online registration is available NOW and we encourage everyone to visit our website www.meadowslea.co.nz, to register, and then place practice bids on the demonstration lots on the auction page.

The Online Open Day video will be released on our website and on Facebook on Friday 29th April at 7pm. This video will include footage of every bull in the catalogue with expert comments from genetic specialists and will be available for viewing right up until the sale.

Online bidding will be open from 7pm on Friday 29th April until the conclusion of the sale.

On Sale Day, May 4th, the on-farm registration and bidding will open at 11am.

Livestreaming with interactive viewing will commence at 12.30 pm with a walk through of all the pens with commentary from the vendors and genetic specialists. Requests to review particular cattle can be made through the comments section of the web-site chat room or by telephone or text to the vendors or stock agents in attendance. This will continue throughout until the conclusion of the sale.

A live screen on the website will show all lots alongside their current prices and the buyer number of the bidder who holds that lot. On-farm attendees will be able to view on a big screen on site. Bids will be displayed on a computer or smart phone screen in the following colours:

A live screen on the website will show all lots alongside their current prices and the buyer number of the bidder who holds that lot. On-farm attendees will be able to view on a big screen on site. Bids will be displayed on a computer or smart phone screen in the following colours

Example:

\$2500 Displayed in Red denotes the Vendor's reserve and indicates there has been no bid

\$3000 Displayed in Blue means an active bid has been received

\$3500 Orange highlight indicates a new Bid has been received within the last 2 minutes on this lot

\$3500 The holder of the leading bid will have the lot number highlighted in green on their computer or their smart phone

The sale will run until 2pm on May 4th. After this time the sale will conclude once there has been a period of at least 2 minutes without a bid being received on any lot. If another bid is placed on any lot during the 2-minute period, then time is extended and bids can be received on all lots for a further 2 minutes. This process will be repeated until a clear 2 minutes passes without any bids on any lot at which time the sale will conclude.

Final Time will be called clearly by the commentary team who will use their discretion to ensure all bidders are satisfied.

All updates will be posted on our website, as will an up-to-date version of this document.

Rebate purchasing Commission. There will be no booking company in attendance and all purchasing companies will be responsible for booking of their own client's purchases.

1. 9% rebate commission paid to the nominated buying company, provided the vendor is advised of the purchaser's intention to buy prior to the commencement of the on-farm sale, or before the purchaser commences bidding online.
2. 3% rebate commission paid to the nominated buying company when the vendor has NOT been advised of the purchaser's intention to buy prior to the commencement of the on-farm sale, or before the purchaser commences bidding online.

FOREWORD

Meadowslea Angus Stud was established in 1985 with the purchase of 6 capital stock heifers from the well-known Turihaua stud north of Gisborne. We have steadily expanded ever since to meet strong demand for bulls from the hill-country market we target – our belief is that an animal must first and foremost be suitable for the environment it is run in.

With the lease of a neighbour's property 8 years ago and the recent purchase of Punoroa Downs next door we have been able to continue increasing stud cow numbers and this season have mated 710 stud females. The demand for our bulls has steadily increased with 170 bulls sold at auction in 2021. Six years ago, with a confident beef industry and the lease block fully stocked, we held our very successful first annual female auction. We now plan to stabilize at around 500 cows and sell a similar number, and age-group breakdown, every year going forward. The longevity, fertility, constitution, and structural soundness of our female cattle are crucial for us to present the number of females in this catalogue. We have very few dry cows and minimal losses to breakdowns or poor constitution because our cows are the right type to handle their environment. This means fewer replacements are required and more quality surplus females are available to sell.

At Meadowslea all yearling heifers are mated. The decision around which to sell and keep was made in February with relatively limited information on the young female cattle, since we did not yet know how they will perform in the herd. No doubt many of the young females we are offering will turn out to perform as well as, or better than some we are keeping ourselves! Clients purchasing these females in the past 5 years have been very satisfied with their performance and each year we have had many repeat buyers. We offer these females for sale with complete confidence, and in particular the annual draft cows are true capital stock having done up to 10 years on the hill, survived droughts and snowstorms, without ever being fed supplements. These H cows have been a very special age-group, being the first progeny of our 2 most influential sires Crump and F540. We knew from the first calf dropped in 2012 that they were going to be something special and could hardly wait for the opportunity to cross these bloodlines. That cross has consistently proved to deliver outstanding performance and has given us some of the leading maternal and fertility traits in New Zealand

The 20 10yr old cows on offer have performed exceptionally well for us, producing bulls sold to the value of \$380,000, including 6 Stud bulls. They have also produced 3 Retained stud sires; all currently being used in the herd.

As you read this catalogue it will become clear that the animals that perform the best in our environment are of a similar type – strong rib fat levels drive our programme forward for two reasons. It is strongly linked to fertility, early puberty and the ability to calve early and re-breed early over a lifetime. Secondly, it is the energy store the females use to get through the feed shortages and extended stress periods all too common in this harsh environment. It is significant that the **average rib fat EBV of all the females on offer is +1.73**, ranking them in the top 15% of the breed in NZ. The other important maternal traits of calving ease, days to calving, scrotal, and milk are generally all at very high levels throughout the catalogue. High-growth females do not work well in our hill-country environment and you will see few in the catalogue, as over time they have failed to perform and so have dropped out of the herd.

All cattle offered have been scanned in-calf by Aorangi Vets Ltd. All dry cows have always been culled at Meadowslea. We individually mate all stud cows, with one bull per mob initially and change bulls over after approximately 30 days. Each cow or heifer is individually assessed and her mating sire carefully selected to optimise her conformation as well as her EBVs, so as to enhance her progeny's suitability for the hill-country environment.

FOREWORD

In 2020 we had 200 stud heifer calves born. We mated 198 as yearlings in 7 different mobs selected on pedigree, performance and type. Some mobs were single mated other had 2 yearlings in the second cycle. The result was a 97% rate conception and is a tremendous endorsement of the emphasis we place on the key fertility and maternal traits that are the main drivers for profitability in any beef herd.

We undertake DNA parentage testing for all stud calves and purchasers will need to do the same if they intend to register or generate EBVs on the progeny.

This is the sixth year we have we have offered our stud females to the industry, and almost all sires used are unique in the world to the Meadowslea herd. For stud breeders this is an opportunity to access out-cross bloodlines proven to be highly productive in the hill country, and for commercial clients the option to gain access to genetics that would not normally be available in their herds for 3 more years. From our perspective, the more of these bloodlines that are available in the industry here in NZ, the better the chances are of us being able to source sires that fit our breeding programme; a task that is becoming increasingly difficult with the NZ Angus gene-pool now so heavily influenced by genetics sourced from the USA and Australia. Feedlots drive most of the selection criteria for these imported genetics making them, in our experience, unsuitable for our NZ grass-fed sustainable hill-country production.

Prime Carcase Data

To assist clients wishing to focus on carcase quality we have included prime carcase data on each lot. This information is easy to present on our female cattle as their scanning date in February at age 15 months matches when our client's stock would also be prime and killable. We have researched the best information and advice from previous experience to predict animals most likely to achieve carcase premiums.

Animals with rib fat of 7ml and above and marbling (IMF) of 5.5% and above at time of slaughter consistently achieve both Silver Fern Farms and Alliance premium Angus grades.

This also shows the importance of rib fat to allow the animal to finish easily on grass and then lay down intramuscular fat which is the last fat to be produced as the carcase becomes prime.

It also shows that the very strong rib fat levels in our cattle are still well within the range of prime carcase grades.

The mating date for the R2yr Heifers was **November 20th**, and the older age-groups was **December 10th**

We wish you well with your purchases and stand behind these cattle 100%.

Regards,

David Giddings

NEW SALE SYSTEM CELEBRATES ITS 2ND YEAR OF SUCCESS

Yourbid, the online Helmsman auction system developed by Meadowslea Genetics of Fairlie, celebrates it's second birthday with the stud's upcoming In-Calf Angus Female Sale on May 4th.

The stud holds 7 on-farm sales a year across their sheep and Angus cattle breeding operations, including the annual in-calf sale in early May. In 2020, this date fell within NZ's Level 3 Covid lockdown, during which no crowds or gatherings were permitted, making an outcry auction impossible.

With feed supplies tight and meat processing capacity limited, deferring the sale really wasn't an option either, meaning the only way forward was to hold it online. After looking at the various options available, the Meadowslea team decided to design their own from the ground up.

After running helmsman sales for many years for ram sales and in-lamb ewe sales previously, David and son George Giddings could see how an online helmsman sale would work very well for stud stock. They were able to provide a webdesigning friend with a specific brief, and a week or so later Yourbid came into being. The sale was very strong, with spirited bidding from around New Zealand, despite no buyers being in attendance at all.

Since that first sale in 2020, Meadowslea have run 14 successful sales for their own stock, as well as a number of sales for other stud breeders in NZ and Scotland. The system has proven very popular with stud-stock buyers, giving them the extra time to consider their purchases carefully, and the option of buying in choice order rather than lot number order.

As well as that first female sale, Meadowslea has run 2 bull sales, an online semen sale, and 3 ram sales on Yourbid. Yourbid has been used very successfully for studstock sales in Scotland, and the Giddings family have received enquiry from breeders keen to use it from around New Zealand as well as in Australia, France, the US and as far afield as Romania. 3 other ram breeding operations have used it in New Zealand this summer, with a number of bull sales confirmed for the upcoming season and many more interested in switching to it over the next few years.

Online helmsman-style auction

Yourbid works as a Helmsman-style auction - meaning all lots are offered for sale simultaneously.

Other online livestock sales platforms in New Zealand use the traditional sequential auction model, whereby each lot is sold one at a time, one after the other. Yourbid uses the "Helmsman" style of auction. This means that all the lots on the sale are open for bidding at the same time, which is helpful for both buyers and sellers, particularly when conducted online. Bidding is also kept open over a period of several days, rather than the minute or so per lot of a conventional auction.

A key difference of this platform compared to any other the developers have seen is the bidding screen which shows the current prices of all lots simultaneously. Reserve prices are shown in red for a start, this changes to blue once the first bid is received, and the buyer number of the current leading bidder is displayed. New bids are highlighted in orange for a minute. Buyers who are logged in on their own device see the lots they hold highlighted in green. This gives an instant overview of the auction so anyone can see on which lots the activity and interest is, making it easy to establish their relative market values.

All online models have some level of time delay between when events happen on-site and when they are seen by remote buyers. For a traditional sequential auction a delay of 15-20 seconds can be very significant, when each animal might only be in the ring for 90 seconds or so. By keeping the entire auction open for a longer period of time this problem is mitigated significantly. It also means sales will not be affected significantly by any temporary technological glitches.

Giving buyers time

Selecting seedstock is a major decision for sheep and beef farmers, and one which will have ramifications on their operations for years to come. People need time to gather and process information to make decisions. This is even more important when buying remotely, when information gathering is more difficult and takes time – meaning remote buyers

are significantly disadvantaged at an online sequential auction. The Yourbid system gives buyers this extra time, and by integrating the bidding on the website alongside the online catalogue, videos of each lot and a live commentary, this information is readily available to buyers. Rather than turning up on a given day and viewing all the animals in that tight time-frame, buyers can go through the catalogue, view the videos, make selections, and bid at their leisure from home over the period of several days the sale is open.

Bidding order of preference

Another advantage of a Helmsman-style auction is that it allows buyers to bid on stock in the order of their preference, rather than the catalogue order. For instance, as a buyer you might be interested in lot 8 and lot 12. At a traditional auction, lot 8 comes into the ring and isn't selling for too much, however lot 12 is your first preference so you decide to wait for that animal to come into the ring. Lot 12 comes in, sells for too much money, and you can't go back and bid on lot 8 because that animal is sold. Under the Helmsman system buyers can chop and change throughout the bidding. Meadowslea have analysed the bidding data for the sales they have run already, and it is obvious that a lot of buyers will bid on a certain lot to a particular level, then change to another lot, then perhaps go back to the first, or move onto a third animal they like. Some buyers bid on as many as 8 different animals to get the one they wanted – in a conventional auction they would have missed out completely or ended up with one that wasn't in their top-10 at all. By running the auction over a longer period, those who missed out on their first choice were able to go back through the videos and catalogue (or back through the pens for those who were actually onsite) and pick another animal they were satisfied with.

Integrating on-farm and online bidding

Integration of on-farm and on-line bids is crucial to the success of a platform like this. This system works by having large TVs on-farm displaying the bidding screen. Buyers on-site can bid through their smart phones, and those bids are displayed in real time. Some buyers will still prefer to attend on-farm and bid using pieces of paper as per a traditional Helmsman sale – they write their buyer number, their lot number, and the bid price on a piece of paper and hand it in – they are able to enter this directly into the online system so it shows up on-screen in real-time as well.

Engaging with potential buyers

By providing a live-chat on the platform, potential buyers are able to ask questions, request another closer view or more information about a particular lot, and even send through jokes and one-liners. Online videos and the livestreamed commentary are produced through Facebook Live. All this makes for a much more engaging and entertaining environment for the buyers, compared to what many feel are the sterile and austere atmospheres of some of the other established online platforms.

Yourbid invite enquiry from breeders, agents and commercial farmers interested in using the platform, and envisage it becoming an independent platform able to be used by all industry players.

Comments: Recognised as one of NZ's most influential and long-lasting senior sires, he is still going strong at 13 years of age. Traditional NZ Angus hill country type with proven industry leading fertility, he has sired over 400 outstanding progeny which are always highly sought after, with sons and grandsons selling for up to \$85,000 at studs across the country. His daughters are the top breeding females in our herd and are proving exceptionally fertile and productive in our hill country, resulting in him now being a breed trait leader for short days to calving at -9.5 days. He has a major influence in this sale with 42 daughters and granddaughters on offer including the first of his 10-year-old daughters which are a feature of the sale.

Comments: F540 continues to have the biggest impact on our herd of any bull we have ever bred and was used again this season at 12 years old. Deep, thick, easy-doing sire with exceptional production figures for hill country. He excels in almost every maternal and fertility trait measurable, and is a trait leader for short gestation, milk, and short days-to-calving at -8.5 days. His daughters are outstanding in the herd weaning thumping calves while maintaining their condition all year round, a real testament to his rib and rump fats which rank in the top 5% of the breed. He features strongly in this catalogue with 32 daughters and granddaughters offered, including the first of his daughters now 10 years old.

Comments: The top Goldwyn bull of his year and purchased for \$13,000. A son of the widely-used Te Mania Infinity and out of the top price cow at the Goldwyn stud dispersal sale. He is passing on good fertility traits with his strong scrotal size and this is reflected in his daughters' conception dates, resulting in him becoming a trait leader for short days-to-calving at -10.6 days. He has several good daughters and numerous granddaughters in the sale all exhibiting his strong IMF which ranks him in the top 5% for the breed.

Comments: There is no doubt why we named this fellow "Meat Machine", and he is fast becoming an all-time favourite sire. We now have over 170 progeny, and he is having a huge impact in the herd. He leaves terrific thickness and depth with great hindquarters, and that easy-doing ability we value so strongly shows in his exceptional rib and rump fats which are almost off the scale for the breed. He is a trait leader for calving ease at +10.8 and has low birthweight and short days-to-calving in an early maturing, moderate frame. We believe he is the true Angus hill-country type. He features strongly in the catalogue with plenty of daughters and granddaughters on offer.

Comments: This son of G914 is out of one of the top 10-year-old Turihaua Crump **daughters offered in this sale at lot 106**, and is bred to, and is bred to be thick as a brick. He has maternal and fertility traits that are exceptional, with calving ease, low birthweight, and short days-to-calving all in the top 10% for the breed. Meanwhile his rib and rump fat EBVs are off the scale. His progeny have scanned so well his EMA has jumped from +2 to +7.2. We believe any high country farmer - and his bank manager - would love to have a herd of cows from this bloodline! He is the sire of some classy females on offer and also has many granddaughters throughout the catalogue.

Comments: Purchased in 2016, he was selected for his volume and capacity with an outstanding hindquarter coming through from Stern Braveheart back in his pedigree. In 2019 we sold the first of his sons as 2-year-olds and they were a real feature of the offering including the top equal price of \$22,000. He is leaving plenty of growth in his progeny with strong rib and rump fats and good IMF. He has some very good daughters on offer and is also represented by several grandsons used as mating sires.

Comments: Purchased at the Beef Expo in 2017, this bull had impressed many at the bull evaluation unit with his structural soundness, good feet and strong hindquarter. He is out of a top moderate-framed Turihaua cow from their embryo transplant programme, who also bred stud bulls sold in the 2018 Turihaua bull sale to Oregon Angus and Alpine Angus. His figures of moderate birthweight, followed by good growth, with a lower mature cow weight, all combine to give a self-replacing index in the top 10% for the breed. He has some impressive daughters and granddaughters on offer.

Comments: This top son of the Rangatira 13-38 (the \$100,000 bull) was sold at lot 10 in the 2018 sale to Peak Hill Station for \$17,000. He has a very good pedigree, being out of a top Crump cow who is also the mother of our stud sire L226. We retained a share in this bull, and his first crop of R2-year daughters are on offer, which look like they will make terrific cows. He is a very powerful bull and is leaving progeny with tremendous depth, thickness, real volume and capacity with very strong growth.

Comments: Purchased at the Gisborne combined breeders' sale in 2018, this son of the well-known Mangapapa Scotty impressed us with his exceptional easy-doing ability and perfect feet. His progeny have proven his terrific rib and rump fats are in the top 5% for the breed, and his depth of body and outstanding hindquarters have fitted right in with the hill-country types we aim to breed here at Meadowslea. He has some impressive 2-year daughters on offer that are worth a very close look.

Comments: This bull was purchased at the Woodbank sale in 2018 for the top price of \$32,000. He was selected for his exceptional depth and thickness and easy doing ability. He has tremendous spring of rib, great depth of flank, and powerful hindquarter. He has good calving ease with moderate birth weight and strong growth. His fertility traits are very strong with his scrotal and short days to calving ranking in the top 10% for the breed. His progeny scanned with good muscle, plenty of fat, and good IMF. We have the first of his 2-year-old progeny for sale this year with some outstanding heifers in this sale plus some very good bulls who will feature in the upcoming bull sale. We have mated him to some top selected cows throughout the catalogue.

Comments: We are very excited by the first calves from our new sire purchased in 2020, Turiroa Panther - named for his superbly balanced walking ability. We rate Panther as one best bulls we have ever had at Meadowslea. He is out of a top-performing cow at Turiroa Stud, from their embryo transplant programme. Her sire was our own Turihaia Crump, and he is a full sister to Turiroa Maverick who bred so well at Rangatira Stud and featured strongly in their recent dispersal sale. Panther is deep, thick, and square with an exceptional hindquarter in a moderate frame. He has a good balance of figures for hill country which combine to give him a self-replacing index in the top 30% for the breed. He was mated to featured lots throughout the sale.

Comments: P565 was our top keeper bull in 2020. He was a standout as a calf, and with his exceptional depth and thickness he was our first choice to mate over stud heifers as a yearling. He has a top pedigree being a son of the well-known Taimate Lazarus, and out of a top 10-year-old cow G943 who was sold in our 2021 Female Sale to Piko-Burn Angus. P565 has good calving ease with moderate birth weight followed by good growth. He has strong figures with very good scrotal and short days to calving, which combine with good muscle and IMF to give strong index figures. He has been mated to some very good cows in the sale.

Comments: We retained P700 in 2020 after using him over stud heifers as a yearling. He was one of the many outstanding sons of L226 and we selected him for his strong fertility traits and compact moderate frame packed full of meat. He excels in all the traits we value in the hill country with calving ease and low birth weight followed by strong growth with efficient moderate cow size. He has exceptional fertility traits with scrotal size, short days to calving, and rib and rump fats all in the top 10% for the breed. His mother is a lovely moderate framed 10-year-old cow offered at **lot 105 in this sale**.

Comments: Purchased at the 2020 Turihaua bull sale, this bull impressed us with his overall balance and quality. We were keen to find a son of Turihaua Rhino who displays such great depth, thickness, and strong hindquarter. Rhinestone has developed tremendously since we have had him, and the first of his calves on the ground now look to have real strength and bone.

Comments: We purchased this Taimate Lazarus son as a yearling for \$9,000 to use in our heifer mating programme. We selected him for his depth of body, strong hindquarter and clean shoulders, and were so impressed with him that he has been used to mate top adult cows as well. His figures fit well with our emphasis on maternal and fertility traits and he ranks in the top 10% of the breed for calving ease, low birthweight, short days to calving, and moderate cow size. His carcass data shows strong muscle, good rib and rump fats as well as IMF. This combination of performance figures generates a Self-Replacing Index at the very top of the breed at +\$175. He is mated to a good selection of R2year heifers in the catalogue and was used to follow up some adult cows.

Comments: Q178 was our top keeper in 2021 and we rate him as one of the best bulls we have ever bred. He is a son of Rangatira 16209 who bred an outstanding line of bulls for us in the 2021 Bull Sale, with sons selling to \$32,000. He displays exceptional depth of body, with a powerful head, bone, and very good feet. He has a superb hindquarter and wonderful temperament. He has a good balance of figures for hill-country with calving ease, moderate birthweight, and moderate mature cow weight. His fertility is strong, ranking in the top 20% of the breed for scrotal size and short days to calving, while his important rib fats are in the top 10%. This bull has attracted much interest with semen sales to some of the leading studs in NZ. He has been mated to some of the top heifers and cows in this catalogue.

Comments: Q250 was also retained in 2021. He is a son of our high-performing sire M564 and a grandson of our record price cow G1000 who was sold in our 2021 Female Sale to Australia. Q250 is a lovely, well-balanced, moderate-framed bull who ticks a lot of boxes for hill country production. He has calving ease with moderate birthweight and mature cow size. His maternal and fertility traits are very strong with his milk, scrotal size, short days to calving, and rib fat all ranking in the top 10% for the breed. He has inherited the good EMA coming through from his record-priced grandmother G1000. A very sound bull with a great pedigree behind him.

Comments: We purchased Rebel at the final Rangatira Bull Sale in 2021 for \$35,000. For us he was the standout bull in the catalogue, both for his pedigree and his moderate, sound, deep body type. His sire is the high performing Turiroa Maverick, who is a son of Turihua Crump. His dam has bred exceptionally well, with a full brother to Rebel selling in the 2020 Rangatira bull sale for \$35,000. Rebel has all the quality and soundness attributes that the Rangatira herd was known for, and we look forward to the first of his progeny arriving this spring. We have mated him to some very good cows throughout the catalogue.

Comments: R818 was the outstanding Meat Machine son from the 2020 calf drop. His dam is by Glanworth 14129, giving a nice outcross bloodline and adding more growth. R818 has exceptionally strong caving ease coming from the Meat Machine bloodline with short gestation and low birthweight. He has good muscle with a very deep wide hindquarter and a wonderful clean shoulder with great balance and outlook. This bull has those easy doing fats and is really hitting his straps now. He will be very impressive by sale time.

Comments: R623 was a standout yearling and an easy selection as a yearling heifer mating sire. His own sire N465 was the highest marbling bull we have bred and was used heavily as a yearling before being sold to Makarora River Ranch. His dam is a good F540 cow, and the granddam was also a top performer being the mother of F801, our top priced cow in the 2020 Female Sale selling to Australia. R623 has calving ease with moderate birthweight and efficient moderate cow size. He is very strong in the fertility traits with good scrotal and short days to calving. His carcass data is strong as well, with good muscle and fats. He has inherited a top IMF from his father and ranks in the top 15% for the breed. We think this chap has a lot of potential.

Comments: R565 is a Lazarus grandson who was used to mate heifers together with R572. R565 is a son of P556 who was used as a yearling and sold to Helmsdale Angus for \$18,000. He has impressive data with moderate birthweight followed by good growth, and an efficient, moderate cow size. He is very strong in the fertility traits with scrotal size and short days to calving ranking in the top 10% for the breed. He scanned with the top rib and rump fats of all 200 bulls measured. His data set combines to generate a self-replacing index in the top 10 % for the breed.

Comments: We selected this R646 to use as a yearling over adult cows. He was mated alongside R650 and both these bulls are from the \$100,000 Rangatira 13-38 bloodline. R646 was an outstanding yearling and is a son of M429 who was sold to Red Oak Stud for \$18,000. His dam goes back to Braveheart and his maternal grandam is a top old cow **in this sale at lot 103**. R646 is a strong, deep-bodied bull with plenty of growth and strong fertility, with scrotal and days to calving in the top 20% of the breed. He has plenty of muscle, very strong fats and the moderate cow size ensuring he generates a very good SRI index. A real prospect for the June bull sale.

Comments: R650 was mated together with R646 over selected adult cows. He has a very powerful pedigree, being a direct son of the \$100,000 Rangatira 13-38. His dam is a top performing 10-year-old cow **H117 who is lot 105 in this sale**, and she is also the dam of retained stud sire P700. R650 is a strong, deep-bodied, moderate framed bull, with the strong fertility traits of short days to calving and good scrotal size. His fats are in the top 2% for the breed and he scanned with good IMF. His data makes him very suitable for hill country production and this results in a very good Self-Replacing Index. Another very good prospect!

Comments: This is an outstanding son of Woodbank 7017 that was used to follow up the AI programme, so will have mated a number of cows in the sale. R578 is a powerful bull with outstanding growth. His fertility is also exceptional with his scrotal size and short days to calving both ranking in the top 10% for the breed. He has the easy-doing good fat covers that are so important in the high country. An impressive bull who will attract plenty of interest if we decide to sell him!

Comments: R609 was used as a yearling to mate stud cows together with his half-brother R619. Their sire P674 was used as a yearling and sold to Emma Gardiner at \$18,000. R609 is a strong, powerful bull with very good growth. He has terrific depth through the flank and hindquarter, good scrotal size, and scanned with very strong EMA. We really like the volume and capacity of this bull as well as his balance and outlook.

Comments: R619 was used as a yearling to mate stud cows together with his half-brother R609. Their sire P674 was used as a yearling and sold to Emma Gardiner at \$18,000. R619 is out of a 2-year heifer and his grandam is a top old cow, sold in our 2020 Female Sale to Paul Revel of Okaka Angus. R619 is a deep bodied, powerful bull with a very strong hindquarter coming through from the Braveheart bloodline. He has strong growth, very good scrotal size, and plenty of EMA. Terrific balance and style make him a very good prospect.

Comments: We purchased this bull at the 2020 Rockley sale as a yearling to mate stud heifers. We were attracted first to his fertility traits, which rank him as the highest fertility bull ever born in NZ for the combination of scrotal and short days to calving. His pedigree is very interesting with some of the great pure NZ bulls in the background including Pinebank 41 and Hingaia 469, as well as Kaharau Heritage 421. Rockley 41 has plenty of calving ease with very short gestation and low birthweight, followed by strong growth in a moderate frame. His carcass data is also impressive with good muscle, strong fats, and good IMF. All this exceptional data combines to generate a very good SRI index in the top 5% for the breed. An exciting prospect and mated with some very good heifers in the sale.

Comments: We lead off our 2022 Female Sale with this top F540 daughter. As is always the case with this bloodline, she is a deep bodied, easy-doing type with great balance, a good topline, and real quality. A strong pedigree with dam G850 a great old cow, sold as a 10-year-old in our 2021 Female Sale to McFadzean Angus. R628 has strong maternal and fertility traits with good calving ease, short gestation, and super low birthweight. She has the efficient, moderate size we look for in hill-country with a strong milk figure and the important short days to calving. She scanned very well with the second-equal biggest EMA and the top rib fat of the year group, as well as good IMF%. A cracking mate to our leading retained sire from 2021, Meadowslea Q178.

Comments: Another smart heifer here by a very good yearling son of Turihaua Loyalty who went on to be sold to Hawkdun Station for \$12500. She is out of a 2yr heifer going back to Meat Machine so we expect calving ease and plenty of muscle from the combination of those bloodlines. R562 has terrific maternal traits with calving ease, short gestation, and super low birthweight. Her important fertility traits of short days to calving, and rib fats, rank her in the top 10% for the breed. She scanned exceptionally well with the 2nd best EMA of the year group, and top rib and rump fats. A nicely balanced heifer with great foot and bone. Mated to our 2021 keeper Q250.

Comments: This next pen of very solid types starts with a daughter of Turihaua Loyalty. A strong pedigree, she goes back to Reality and F540 on the dam side. R738 has inherited all the maternal and fertility traits we would expect with terrific calving ease, short gestation, and low birth weight, all in an efficient moderate frame size. All this, combined with good carcass data, generates a good SRI index. Exceptionally sound, well balanced, and a great mate to Q250.

Comments: A daughter of the yearling bull P532, who was used as a yearling and sold to Waewaepa Station for \$8,500. Out of a young Turihaua Loyalty cow who was sold in the 2021 Female Sale to Westfield Angus. Very nicely balanced heifer with some style and outlook. She has great length along the top and is very sound, with the efficient moderate frame size we aim to breed in the hill-country. Mated to the top yearling R623, who is a quality Goldwyn x F540 with strong IMF%..

Comments: Here is another very similar type, again out of a cow by Turihaua Loyalty and this time sired by the Meat Machine bloodline. Good handy set of data for hill country, with calving ease, moderate birth weight, and an efficient moderate cow size. Strong fertility traits with good scrotal and short days to calving, and those rib and rump fats in the top 10% for the breed. R838 is well balanced and moves well with a great outlook. She shows plenty of volume and capacity with width across the top. Mated to the new high fertility yearling purchased in 2021, Rockley R41.

Comments: Another impressive Ratanui Nugget daughter, going back to Waiterenui Alliance. A nice efficient moderate frame size and some impressive scanning data with good EMA and the third-best IMF of this age group. Well balanced with a clean shoulder, great width across the top, and deep through the rib with good hindquarter. A productive maternal type ideal for hill country. Mated to the impressive Meat Machine yearling, R818.

Comments: We lead this pen of high-performance heifers with this exciting prospect, offered on account of Ballanee Angus in Australia. The dam F801 was purchased for top price in our 2020 Female Sale and is currently producing embryos for export to Australia. R595 was born in Fairlie and spent several months at the Xcell AI center with her mother, before returning and wintering with 200 heifers at Meadowslea. A very classy daughter of Taimate Lazarus, she has the highest Self Replacing Index of her year group and excels in every maternal and fertility trait measurable. A lovely clean shouldered, upstanding, and well-balanced heifer. Note slight white on flank. An exciting mate to Q178.

Comments: Another Lazarus daughter to follow, with almost as impressive a set of figures as the last. Out of a cow by F541, who was a half-brother to F540. R626 has calving ease and moderate birth weight, with the very strong fertility trait of short days to calving, and rib fat in the top 2% for the breed. She scanned with the second-best IMF% of the group, and together with her efficient moderate size this all generates a very good SRI index. Clean shouldered and upstanding with good easy doing traits. A top mate once again to Q178.

The Meadowslea hill-country type

Visual appraisal is still very important for selecting cattle to perform in hill - country

MASCULINE TRAITS - A strong head and jaw and thick neck indicate high levels of libido, testosterone and reproduction efficiency

NECK LENGTH - A thicker necked animal matures and reaches puberty earlier and has more libido

A longer neck indicates a higher maintenance animal that is slower to reach puberty and re-breed

HEART GIRTH - Large heart girth is an indicator of vigor and easy keeping ability

Small heart girth animals are more susceptible to stress, are higher maintenance and do not perform well on tussock

RIB FAT - Strong rib fat covers are the essential energy store for adverse conditions.

They indicate easy-doing and finishing ability and are directly related to increased fertility in both heifers and cows.

STRUCTURAL SOUNDNESS, FEET AND BONE - High country cattle cover large distances over rugged terrain so a strong skeleton is essential

HIDE - a good thick skin and coat is essential in the cold harsh environment

FLANK - Deep flanked animals are easier keeping, have more meat in the rump and have more maternal and reproductive efficiency

Higher flanked animals tend to be flighty, are higher maintenance and take longer to finish on grass

SCROTAL SIZE - Larger scrotal size at 12 months indicates daughters will reach puberty earlier, be more fertile, and re-breed early every year.

BRED FOR THE HILL COUNTRY

The development of the Meadowslea hill - country type has been the result of 25 years of selecting animals that perform the best in our harsh hill country environment. Cows that can winter easily on the hill without supplements, stay in good order, calve easily and get back in calf early every year for 10 years has been the focus of our breeding programme. By putting pressure on cows to winter on native hill blocks it quickly became apparent that some animals could manage well in this environment and would easily get back in calf the next year, while those that struggled would be too light going to the bull, and either calve later each year, or come through dry.

Those that were dry or were not holding their condition well enough were removed from the stud herd, while the "easy-doing" types thrived and passed their genetics on to the next generation. It was clear that it was the cows with good fat covers going in to the winter that were consistently performing the best in our environment.

Ultrasound scanning is performed on all yearling bulls in early spring, and on the heifers in the autumn. For us, the most important data is the rib and rump fat cover measurement - we have found these strongly correlate with those easy doing characteristics, and we now put a lot of emphasis on this when selecting bulls to use and heifers to retain. This is reflected in Meadowslea having some of the highest fat EBVs on the Trans Tasman Angus Cattle Evaluation.

These great positive fat EBVs in the Meadowslea herd have come about simply by selecting animals that suit the hill country environment.

Carcase Rib Fat (mm)

Graph showing improvement in fat EBVs at Meadowslea while running the herd on hill country, compared with Australasian average. From TransTasman Angus Cattle Evaluation, April 2022.

■ Meadowslea herd
● Australasian herd average

The average rib fat EBV of the females in this catalogue ranks in the top 15% for the breed in Australasia.

Comments: Another high-performance heifer of a similar type to the last. She has a strong pedigree, being sired by the Loyalty son P654. On the dam side she goes back to M429, who was sold to Red Oak Angus for \$18,000. Real performance here with calving ease, moderate birthweight and tremendous growth, giving her the top 400-day weight of the group. She scanned with good muscle, fats and IMF to generate a good SRI index. Scope and scale once again, with a lovely clean shoulder and balance about her. Mated to the Lazarus yearlings R565 and R572.

Comments: A very strong coated heifer here, out of a good Crump breeding cow. Sire P539 was used to follow up the AI so we know the mother is a top cow. Good fertility traits with strong scrotal size and short days to calving. R726 has nice clean shoulders and a good outlook. Terrific growth, width across the top, and depth of body. Mated to the yearling R623.

Comments: A K703 daughter leading in this next pen of bigger-framed heifers. This is a top pedigree with dam K041 breeding a full brother sold at lot 9 in last year's bull sale to Will and Robin Jameson. R877 has strong fertility traits with good scrotal size and short days to calving. She scanned well for EMA and has strong fats. Terrific volume and capacity about her, real width across the top, deep body and strong hindquarter. A top heifer of her type and very sound. FEATURE LOT mated to Q250.

Comments: An L226 granddaughter here with good performance. Goes back to Matauri Reality. Maternal grandam H254 is lot 110 in this sale. Lovely clean shoulders ensuring great calving ease from the Reality bloodline. Strong fertility with short days to calving and rib and rump fats in the top 5% for the breed, indicating terrific easy doing attributes. A nice clean-cut type. Mated to the yearling R623.

Comments: A Ratanui Nugget daughter, going back to Turiroa 14830 with a shot of F540 in there as well. Another very easy doing type with those rib and rump fats in the top 5% for the breed and figures very suitable for running efficient medium framed cows on hill-country. A great topline, length, and balance about her and mated to the yearling R623.

Comments: We lead off this pen of strong coated, deep bodied heifers with this daughter of the yearling P649, a Loyalty son, who went on to sell to Hawkdun Stn at \$15500. She is out of a 2yr heifer from a strong maternal line with granddam L086 producing 2 stud bulls including Q295 sold to McFadzean Angus at \$15000 in 2021. R618 has calving ease with super low birthweight and the important fertility traits of short days to calving and Rib fat in the top 10% for the breed. She scanned well with strong fats and plenty of IMF. Nice clean shoulders with width across the top, depth of flank and good balance about her. Mated to Q250.

Comments: Note: this final pen of heifers missed the latest data run - and so their latest scanning and growth data will not be updated until May 1st. We start this pen of quality heifers with this daughter of L226. She goes back to a cow by the great Glanworth 0816. Terrific solid type of heifer, with real width to her. Great depth, volume, and capacity with a deep flank and strong hindquarter. Strong coat, she also scanned with the top rib and rump fats and a very top IMF of 7.1%. Good calving ease, moderate birthweight and mature cow weight make her an ideal hill-country type. We rated her highly and put her to Q178.

Comments: A daughter of the Loyalty son P654, and out of a 2-year heifer by Meat Machine. Calving ease with moderate birth weight and the efficient mature cow weight we aim for. All this data combines to generate a good SRI index. Great topline, terrific depth through the flank and a great hindquarter. She exhibits all the muscling we expect from the Meat Machine bloodline. A very solid type mated to Rockley 41.

Comments: Here is a direct daughter of Loyalty, out of a cow by KayJay Crampton and going back to the great Glanworth 16. Fantastic depth and thickness once again. Lovely width across the top, strong hindquarter and a great coat on her. Calving ease with low birthweight and very moderate efficient cow size. She scanned with good fats and plenty of IMF, which combine to give her a very good SRI index. A top heifer and again we selected her to mate with Q178.

Comments: We complete this first pen of top heifers with a daughter of Turiroa 14830, out of a high-performance F540 cow with a very strong pedigree going back to Braveheart and Unlimited. Both her dam and grandam are top breeders and have produced sale bulls sold over \$10,000. Terrific volume and capacity, lovely topline, very strong hindquarter and easy-doing attributes. A top heifer in every way! This should be a fantastic mate to Meadowslea N166 who is breeding so well for us.

Comments: Another very attractive heifer again by K703. As always with the Meat Machine bloodline she has inherited strong maternal and fertility traits with calving ease and low birth weight, while her short days to calving, rib fat, and rump fat are in the top 10% for the breed. A strong maternal pedigree here with two shots of Highlander of Stern and the grandam having bred a stud bull to Piko-Burn Angus. Lovely clean shoulders ensure calving ease along with her low birth weight figure. She scanned well with good muscle, fats, and IMF as well. Terrific outlook with balance and style, another top mate to Q178. FEATURE LOT.

Comments: Another deep-bodied, easy-doing heifer, combining the Crump and F540 bloodlines which are always among the star performers at Meadowslea. Q231 has a very handy set of data for hill country with moderate birth and growth, and very short days to calving in the top 5% for the breed. She scanned with the top EMA of this age group with very good fats and plenty of IMF. Great depth, terrific hindquarter and wide across the top. A good quality mid-framed heifer once again and also in calf to Q178.

Comments: This daughter of L226 is another good medium framed type. Her figures confirm her moderate size and good fertility. She has calving ease, low birthweight and mature cow weight, as well as good scrotal and short days to calving. Terrific topline, deep body, width across the top with a good hindquarter, and a strong coat for the harder country. Another top mate to Q178.

Comments: An F540 daughter leads in this pen of deep bodied, mid-framed cows. Out of a Crump cow – as anyone who follows our bloodlines will know that is a great cross. Dam J501 is breeding exceptionally well with sons sold at \$14,000 to Greg Hand and \$13,000 to Mt Cook Station. Q499 is a classic F540 type, upstanding with clean shoulders, a deep body and quality about her. Another top mate to Q178.

Comments: Here is a nice clean-shouldered heifer going back to Kay Jay Crampton. Out of a young F540 cow with Crump in the background. With those bloodlines we know the maternal and fertility traits will be strong. Q211 has terrific calving ease, short gestation and low birth weight with strong milk and scrotal figures. Her short days to calving, rib fat and rump fat are in the top 5% for the breed. A lovely easy-doing type with great skin and a kind maternal outlook. Mated to Turihaua Tornado.

Comments: A classic F540 daughter to start this age group. Out of a good-performing young Goldwyn 17 cow who previously bred a son sold to Grampians Station for \$8,000. She exhibits all the attributes of those well-known bloodlines. Calving ease with very short gestation, moderate birthweight and mature cow weight. She is very strong in the fertility traits with good scrotal and short days to calving in the top 2% for the breed. Scanned well with very good fats and the second-best IMF% of her year group. Deep bodied, easy-doing type with great width, capacity, and excellent hindquarter. A real quality female as you would expect. Mated to the highly-rated Turiroa Panther.

Comments: A very nice, easy fleshing K703 daughter to follow. She has lovely easy doing quality, showing in her rib and rump fats in the top 2% for the breed. She is strong in maternal and fertility traits with calving ease and moderate birthweight, and with the efficient mature cow weight we strive for. Terrific fertility with scrotal and short days to calving in the top 10% for the breed. She scanned well for EMA and all these traits combine to give a good SRI index. A great type of hill country cow with a great topline, balance, outlook, and style about her with a great hindquarter. Mated by AI to Q158.

Comments: Another very similar type, this time by a grandson of F540 and out of a very good cow sold as a 10-year-old in our 2021 sale to Waimara Angus. Good fertility traits from the F540 blood with strong scrotal and short days to calving. Deep, thick, and square with lovely balance, clean shoulders, and width across the hips with another top back end. Mated to P565.

Comments: A daughter of L226, and a Feature Lot. This is another very well balanced, stylish cow with clean shoulders, a good topline, and square body type with a very good wide backend. She has very strong growth and achieved the top 400-day weight of her year group. She scanned very well with the third best EMA and the top IMF% of her year group as well. We rate her good enough to mate to Kaharau Q327 – NZ's record price bull sold for \$106,000 in 2021.

Comments: We lead this pen with a granddaughter of Matauri Reality with great balance and outlook about her. Out of a great old 10-year-old cow who is lot 110 in this sale. Lovely clean shoulder and terrific easy doing attributes showing in her rib and rump fats ranking in the top 1% for the breed. Impressive scan with the top EMA measurement and second best IMF% for her age-group. Very maternal type of cow which is reflected in her SRI index figures. Another exciting mate to Q178.

Comments: A bit more scale in this Turihaua Loyalty daughter who is out of a terrific Crump Cow H104. Unfortunately, we lost this cow who is the mother of 2 keeper bulls (L226 and M452) who both continue to have a big influence in the herd. P745 shows great growth with a moderate mature cow weight and the excellent topline and balance we expect from that breeding. She has clean shoulders, great length and outlook about her. Mated to the new Turihaua Bull, Tornado.

Comments: A well-bred cow here, by M429 who was sold to Red Oak Stud for \$18,000, and out of a cow by F540. A performance pedigree which is certainly shown in her figures. Terrific clean shoulder giving her that great calving ease. She has short gestation and low birth weight with a moderate cow size. Great scanning here with plenty of muscle, very good fats, and the top IMF% of her year group. A great topline to a very well put together cow with an impressive SRI index. Should be a cracking mate to the powerful N166.

Comments: We start this next medium-framed pen with this deep-bodied K703 daughter, out of a cow by F540. We know with these bloodlines the fertility traits will be strong and P826 does not disappoint with calving ease, short gestation and moderate birth weight. A good milk figure, strong scrotal and the important days to calving, means she will be productive and fertile. Her scanning is equally as impressive with the third best EMA and the top rib fat of the group. A nice square, efficient type with that great depth of body and easy fleshing we aim for in hill-country. Mated by AI to Turihua N59 (the top Turihua bull breeding so well at Ratanui Angus).

Comments: A nice upstanding Meat Machine daughter out of a good 10-year-old cow. Moderate framed with clean shoulders giving good calving ease. She has good muscle and a nice topline with balance, and style. Another exciting AI mate to the Turihaua N59 who is breeding so strongly for Ratanui Angus.

Comments: This bigger-framed pen of cows starts with this L106 daughter (going back to the Goldwyn 17 bloodline) out of a good 12-year-old cow by Yelet. Terrific length and stretch about her with good bone and clean shoulders. Strong fertility traits of short days to calving and good scrotal. Mated AI to Meat Machine.

Comments: We lead this outstanding age group of proven 10-year-old cows with the first of the F540 daughters, sired when he was used as a yearling back in 2011. H144 is an outstanding cow exhibiting all of F540's attributes: deep body, width across the top, and terrific hindquarter with very nice style and outlook. She has calving ease, low birth weight, and moderate mature cow weight. Her fertility figures are very strong with good scrotal and a short days to calving figure in the top 1% of the breed. She has good muscle with exceptional fats and IMF, all combining with her performance figures to generate a great SRI index for a 10-year-old cow. She has produced 3 good sale bulls including a stud bull sold to Bannockburn Angus at \$13,200. Fantastic AI mate here to Kaharau Q327, NZ's record price \$106,000 bull sold in 2021.

74%	65%	70%	68%	73%	72%	68%	67%

Comments: Another beautifully balanced F540 daughter very similar to the last. H107 has been the top performing F540 daughter in the herd. She has exceptional growth figures all in the top 10% of the breed, and her short days to calving figure is industry leading at -9.4 days. Her scanning data was exceptional with the biggest EMA, highest rib fat, and second best IMF% of her year group. All these figures combine to give her another exceptional SRI index for an old cow. She has bred 2 cracking sale bulls including lot 2 sold in the 2019 sale to Brian Keenan at \$17,000. A deep-bodied cow with extra volume and capacity. An exciting mate here to our new \$35,000 Rangatira Rebel.

Comments: The first ever Turihaua Crump calf born back in 2012, and we knew immediately this bloodline was going to be something special! She exhibits all the signature Crump traits, with the terrific balance and lovely topline, length hip to tail, depth through the flank, and that classic Crump wide, deep hindquarter. These Crump daughters have terrific fertility and H101 has short days to calving at the very top of the breed at -9.9 days. She has produced 3 good sale bulls including N228 used in the stud and later sold to Mt View at \$9,000. Mated to our top 2021 keeper Q178.

Comments: Another classic Crump daughter, showing the great coat this bloodline is also noted for. Beautiful balance, topline, and depth of body with volume and capacity. Once again, her exceptional fertility is expressed with a short days to calving at the very top of the scale at -10.3 days. She has bred well with 4 good sale bulls including N210, who was used as a yearling and later sold to Will and Robin Jameson at \$10,500 (N210 is the sire of one of the top prospects for this year's bull sale). She has a classy daughter in this sale at lot 18. A perfect mate for the \$106,000 Kaharau Q327.

66%	53%	63%	61%	68%	66%	60%	59%

Comments: A well-put-together, moderate-framed cow again. Sired by a very good yearling bull who passed on exceptional EMA to his progeny, and out of a cow by the same sire as F540. She scanned with exceptional fats at the very top of the breed, as well as a very strong EMA. Terrific hindquarter, with great depth of rib and wonderful easy doing attributes. We have chosen a very exciting AI mate to Meadowslea P593 who was sold to Cricklewood Angus for \$34,000 in 2020.

Comments: This daughter of Piko-Burn Char has been breeding very well for us. She has produced 4 good sale bulls as well as 2 sons used as yearlings within the stud, including R686 - one of the real prospects for this year's bull sale. A nice, efficient, moderate-framed cow, who is very well-balanced with terrific topline and outlook. Strong muscle and good fats combine with her short days to calving to generate a good SRI index for an old cow. Clean shoulders, strong hindquarter, and very well put-together. Should be a top mate to Turiroa Panther.

Comments: Here is a great pen of medium-framed cows who have bred exceptionally well for us. H117 is a daughter of F737, going back to Highlander of Stern. She has calving ease with low birth weight and an incredibly efficient moderate cow size. Her important fertility traits of short days to calving and scrotal size rank in the top 2% for the breed, while her rib and rump fats are off the scale! All these traits combine to give an exceptional SRI index for an old cow of +\$154. She is breeding very well with 3 good sons selling to \$8,500, as well as our keeper sire in 2020, Meadowslea P700. She has one of the top prospects for this year's bull sale, R650, who was used as a yearling to mate stud cows in this sale. A very easy doing, moderate-framed cow with a great hindquarter who has thrived on our hill country. Should be a superb mate to N116.

Comments: This Crump daughter has had a powerful influence on our herd. She is the mother of our stud sire K703 who is leaving some of the thickest and strongest-muscled cattle we have ever bred. H126 is a true efficient, moderate-framed type. She has the terrific short days to calving trait, in the top 2% for the breed, that we consistently get with the Crump progeny. Her exceptional carcass data is being passed on to all her descendants, with very strong EMA and rib and rump fats being measured in all the K703 progeny. She has produced 3 other good sale bulls selling to \$10,000, and rears a thumping calf every year. Mated to our top Lazuras keeper from 2020, P565.

Comments: Here is a classic F540 daughter who is breeding terrifically well. Another of these moderate, deep, thick, and square types that perform so well in our environment. She has produced 4 top sale bulls totaling \$53,000, including a stud bull sold to Turihaua Angus for \$24,000; another stud bull M444, used as a yearling and sold to Rocky Point Station, and a very good yearling sold to Peak Hill Station. A well-balanced feminine type with a top back end and very good feet and bone. Exciting prospect here carrying a mate to the \$32,000 Woodbank 7017.

Comments: Another classic Crump cow to kick off this moderate framed pen of cows. Once again, she shows the exceptional fertility traits that Crump leaves in his progeny with a top scrotal and a short days to calving figure that is in the very top percentile for the breed. She has produced 4 good sale bulls and 1 daughter retained. Nicely balanced with plenty of width across the top and that characteristic Crump hindquarter. Mated by AI to the \$32,000 Woodbank 7017.

Comments: A Turihaia Crump daughter again, these cows have proven to be incredibly fertile and productive over the years and H305 is no exception. Her days to calving figure at -9.5 is industry leading and her rib and rump fats are in the top 1% for the breed. She has bred strongly with her first son, produced when she was a 2-year heifer, selling for stud to Linnburn Station for \$11,000. She has produced 2 other good sale bulls and 1 daughter retained. She has the Crump signature good coat, with plenty of volume and capacity, depth of rib, and good hindquarter. A great mate to Q178.

Comments: Another bigger volume cow here, with a good coat, real capacity, nice topline, and length hip to tail. She has strong growth figures with good fertility traits and strong muscle and fats. She bred a Stud bull, H141 with her first calf produced as a 2-year heifer, and has had 2 other sale bulls and a daughter retained. A great mate for the last cow on offer – in calf to the highly rated Turiroa Panther.

NOTES

PROUD TO BE LOCAL

THE FEELING'S MUTUAL.

There are plenty of good reasons for being local, right now. As a 100% MS-owned mutual, we've always been proud to be local—and to act local. That's why you'll see us at events (when we can) all over the country supporting those who support us. Most of our teams live and work in the same region as the farmers, which makes it easy to come to the farm and share specialized insurance and risk advice. When we're not on farms with you, we're only a phone call away to chat through things over the phone. If that sounds like the kind of local insurer you'd like to deal with, ask around about us or better still, give us a call on 800 466 466.

We're here for the good of the country.

FMG
Mutual Insurance Group

Instant livestock cover

FME Instant Livestock Cover provides short term, non-renewing cover for your specified animal(s) for death or infertility as a result of accident, disease or illness.

Your animal's age and value

Any animals covered under this policy must be certified 'fit for purpose', be sound health and be qualified for automatic underwriting. Its purchased for less than \$25,000 each.

Animals: Bull, ram and cow/half
Age Limits Between 4 months and 5 years

Animals: Stag
Age Limits Between 2 months and 12 years

During the period of insurance, the specified animal is covered for

- Theft.
- Death caused by an accident, disease or illness.
- Bulls, rams, stags and remains infertile—Intervenor slaughter because the animal becomes infertile through accident, disease

or illness, and provided that the animal has been infertile for more than 30 days, or the vet has certified that the animal is permanently infertile. Please note this cover is not available for ewes/halfs.

You are automatically covered for

- Up to \$500 for the reasonable vet fees you incur for treatment of injury or treatment administered to prevent the death of your specified animal, whether or not death occurred.
- Up to \$2,500 for the reasonable cost you incur to remove the carcass of the specified animal following a loss.

You also have the optional cover for

Your specified stags to be covered for accidental death as a direct result of hard antler or velvet removal.

Period of cover options

- 30 days.
- Up to 3 months.
- Between 3-6 months.
- Between 6-12 months.

You can also insure your livestock on an ongoing basis under our separate Livestock policy.

What we will pay

Fair market value of your specified animal, less any amount you receive for the sale of the carcass, up to the amount shown on the insurance certificate.

Instant livestock cover*

Please fill in this form as soon as you have purchased your new animal(s).

*Conditions of acceptance

Please refer to the attached tear-off sheet for applicable age limits and maximum values. If your animal is outside these ages, contact FME on 0800 388 488 for further options.

Acceptance of cover is conditional on this fully completed form being received by FMG within 10 days of purchase and standard FMG underwriting criteria being met. For full details of the cover, you should refer to our Livestock policy

document which is available on our website www.fmg.co.nz or by calling 0800 388 488.

If you would like a renewing cover rather than a short term lapsing policy or would like a death only policy, please contact FME on 0800 388 488 for a quote. Please note, renewing cover can only be offered to existing FME clients. This is an optional benefit that needs to be purchased in addition to your standard insurance cover.

Please complete this form and return within 10 days by fax 03 358 1820, email businesssupport@fmg.co.nz, or post FMG, PO Box 2141, Christchurch 8140. Attn: Business Support.

M E A D O W S L E A
ANGUS & SHEEP GENETICS

PROVEN HILL-COUNTRY ANGUS

- Thick, deep, medium-framed cattle
- Strong positive fat EBVs
- Industry-leading fertility and maternal traits
- Easy-doing, shift well and thrive in the New Zealand environment.

In-Calf Female Production Sale

Wednesday 4th May
Approx 100 in-calf stud Angus females - selected R2, R3,
R4 and 10yr proven cows, all PTIC to top stud bulls

2022 Bull Sale

Friday 24th June, 1pm
70 R2yr Bulls

- Both sales simultaneously on-farm and online through the **yourbid** platform developed by Meadowslea in 2020.
- Online bidding will open approx 1 week earlier with full video and commentary of every lot online at www.meadowselea.co.nz
- Livestream video and interactive chat
- New selling enquiry form either broadcast, farm-to, and agents interested in using **yourbid** - see www.yourbid.co.nz

FERTILITY AND MATERNAL TRAITS the key to profitability in any herd!

Meadowslea stud cows winter on unimproved native tussock blocks without supplements being fed. This challenging environment tests the ability of the pregnant cow to maintain condition through periods of winter feed shortages. It is the energy stored in her rib fat levels that enable her to survive, thrive, and ultimately get back in calf and rebreed each year.

Days to calving is a crucial fertility trait that measures the number of days from when the bull is let into the mob until the cow calves. This identifies cow families that calve early every year. Those earlier calves will always be heavier at weaning, and selecting for short Days to Calving will reduce later born calves and allow higher conception rates in a shorter mating period.

"At Meadowslea we have always had some of the highest rib fat levels in the Angus breed. The importance of these fat levels is now recognised with our cattle now having some of the shortest days to calving EBVs in Australasia."

David Giddings

GOOD FAT COVER AND EASY-DOING ABILITY

Meadowslea stud 18mth in-calf heifers showing good fat coverings and ready to winter on the hill.

Meadowslea cows and calves come down off the hill for weaning.

A cow's condition and her ability to lay down fat in times of surplus, and to draw on that fat as an energy source in times of feed deficit is vitally important. This rib and rump fat is the cheapest and most efficient energy store on the farm, and will determine the ability of the herd to get back in-calf and rebreed early after a hard winter or difficult spring.

All Meadowslea yearling heifers are mated and any dries culled. After calving these heifers are run in mating mobs together with mixed age cows and expected to get back in calf early, rear a good calf off the tussock, and stay in good order. This is a tough ask for a first-calver, but this year that age-group scanned with a terrific 97% back in-calf rate!

A cow going into winter with good fat coverings carries an energy store on her back equivalent to approximately 2 bales of baleage.

The Meadowslea herd has natural rib and rump fat levels amongst the highest in the breed in Australasia – acknowledged as a key trait for fertility in the harsh environment.
