

MEADOWSLEA ANGUS 7TH ANNUAL FEMALE PRODUCTION SALE

ON-LINE AND ON-FARM
MAY 3RD 2023 – 1PM
www.meadowslea.co.nz

OFFERING:

68 R2yr Stud Angus Heifers

24 R3yr Stud Angus Heifers

20 R4yr Stud Angus Cows

20 10yr old Capital Stock Angus Cows

FERTILITY AND MATERNAL TRAITS the key to profitability in any herd!

Meadowslea stud cows winter on unimproved native tussock blocks without supplements being fed. This challenging environment tests the ability of the pregnant cow to maintain condition through periods of winter feed shortages. It is the energy stored in her rib fat levels that enable her to survive, thrive, and ultimately get back in calf and rebreed each year.

Days to calving is a crucial fertility trait that measures the number of days from when the bull is let into the mob until the cow calves. This identifies cow families that calve early every year. Those earlier calves will always be heavier at weaning, and selecting for short Days to Calving will reduce later born calves and allow higher conception rates in a shorter mating period.

"At Meadowslea we have always had some of the highest rib fat levels in the Angus breed. The importance of these fat levels is now recognised with our cattle now having some of the shortest days to calving EBVs in Australasia."

David Giddings

GOOD FAT COVER AND EASY-DOING ABILITY

Meadowslea stud 18mth in-calf heifers showing good fat coverings and ready to winter on the hill.

Meadowslea cows and calves come down off the hill for weaning.

A cow's condition and her ability to lay down fat in times of surplus, and to draw on that fat as an energy source in times of feed deficit is vitally important. This rib and rump fat is the cheapest and most efficient energy store on the farm, and will determine the ability of the herd to get back in-calf and rebreed early after a hard winter or difficult spring.

All Meadowslea yearling heifers are mated and any dries culled. After calving these heifers are run in mating mobs together with mixed age cows and expected to get back in calf early, rear a good calf off the tussock, and stay in good order. This is a tough ask for a first-calver, but this year that age-group scanned with a terrific 97% back in-calf rate!

A cow going into winter with good fat coverings carries an energy store on her back equivalent to approximately 2 bales of baleage.

The Meadowslea herd has natural rib and rump fat levels amongst the highest in the breed in Australasia – acknowledged as a key trait for fertility in the harsh environment.

Meadowslea Seventh Annual Female Production Sale

ON-LINE AND ON-FARM

State Highway 8, 23 Trotters Road, Fairlie
5km west of Fairlie

ON-LINE BIDDING OPENS

HELMSMAN STYLE AUCTION

Wednesday 3rd May - 1.00pm

Sale Format

The sale will be conducted as a Helmsman-style auction, meaning that all lots are for sale simultaneously. This is to allow for the participation of those in attendance, as well as those online. The sale will be hosted on our own **yourbid** platform and accessed through our website www.meadowslea.co.nz. Prior to the sale, all lots will be filmed and available for viewing up until sale day on the Meadowslea website.

The cattle are available for viewing in the paddock anytime

– just call 0272299760 to arrange a time.

Registration for those in attendance will be at the on-farm office, where a copy of the conditions of sale will be posted.

Registration for those online will be through the Meadowslea website, where the conditions of sale will also be available.

Buyers will receive a buyer number as they register which will accompany each bid. Buyers registering online will receive a buyer number in their email which will automatically accompany each bid they place, whether they do so at home on their computer, or through their smart phone while in attendance. Those in attendance may also bid by writing on the supplied bidding cards and handing them in to the auctioneers. All live bids and all lots will be visible at all times, both online and on a big screen on-farm.

Online registration is available NOW and we encourage everyone to visit our website www.meadowslea.co.nz, to register, and then place practice bids on the demonstration lots on the auction page.

The Online Open Day video will be released on our website and on Facebook on Friday 28th April at 7pm. This video will include footage of every bull in the catalogue with expert comments from genetic specialists and will be available for viewing right up until the sale.

Online bidding will be open from 7pm on Friday 28th April until the conclusion of the sale.

On Sale Day, May 3rd, the on-farm registration and bidding will open at 11am.

Livestreaming with interactive viewing will commence at 12.30pm with a walk through of all the pens with commentary from the vendors and genetic specialists. Requests to review particular cattle can be made through the comments section of the web-site chat room or by telephone or text to the vendors or stock agents in attendance. This will continue throughout until the conclusion of the sale.

A live screen on the website will show all lots alongside their current prices and the buyer number of the bidder who holds that lot. On-farm attendees will be able to view on a big screen on site. Bids will be displayed on a computer or smart phone screen in the following colours:

A live screen on the website will show all lots alongside their current prices and the buyer number of the bidder who holds that lot. On-farm attendees will be able to view on a big screen on site. Bids will be displayed on a computer or smart phone screen in the following colours

Example:

\$2500 Displayed in Red denotes the Vendor's reserve and indicates there has been no bid

\$3000 Displayed in Blue means an active bid has been received

\$3500 Orange highlight indicates a new Bid has been received within the last 2 minutes on this lot

\$3500 The holder of the leading bid will have the lot number highlighted in green on their computer or their smart phone

The sale will run until 2pm on May 3rd. After this time the sale will conclude once there has been a period of at least 2 minutes without a bid being received on any lot. If another bid is placed on any lot during the 2-minute period, then time is extended and bids can be received on all lots for a further 2 minutes. This process will be repeated until a clear 2 minutes passes without any bids on any lot at which time the sale will conclude.

Final Time will be called clearly by the commentary team who will use their discretion to ensure all bidders are satisfied.

All updates will be posted on our website, as will an up-to-date version of this document.

Rebate purchasing Commission. There will be no booking company in attendance and all purchasing companies will be responsible for booking of their own client's purchases.

1. 9% rebate commission paid to the nominated buying company, provided the vendor is advised of the purchaser's intention to buy prior to the commencement of the on-farm sale, or before the purchaser commences bidding online.
2. 3% rebate commission paid to the nominated buying company when the vendor has NOT been advised of the purchaser's intention to buy prior to the commencement of the on-farm sale, or before the purchaser commences bidding online.

Disclaimer: The BREEDPLAN Estimated Breeding Values (EBVs) contained within this sale catalogue were compiled by the Agricultural Business Research Institute (ABRI) from the data supplied by breeders. Neither AngusNZ nor ABRI oversee or audit the collection of this data.

FOREWORD

Meadowslea Angus Stud was established in 1985 with the purchase of 6 capital stock heifers from the well-known Turihaua stud north of Gisborne. We have steadily expanded ever since to meet strong demand for bulls from the hill-country market we target – our belief is that an animal must first and foremost be suitable for the environment it is run in.

With the lease of a neighbour's property 8 years ago and the recent purchase of Punoroa Downs next door we have been able to continue increasing stud cow numbers and this season have mated 730 stud females. The demand for our bulls has steadily increased with 170 bulls sold at auction in 2022. Seven years ago, with a confident beef industry and the lease block fully stocked, we held our very successful first annual female auction. We now plan to stabilize at around 500 cows and sell a similar number, and age-group breakdown, every year going forward. The longevity, fertility, constitution, and structural soundness of our female cattle are crucial for us to present the number of females in this catalogue. We have very few dry cows and minimal losses to breakdowns or poor constitution because our cows are the right type to handle their environment. This means fewer replacements are required and more quality surplus females are available to sell.

At Meadowslea all yearling heifers are mated. The decision around which to sell and keep was made in February with relatively limited information on the young female cattle, since we did not yet know how they will perform in the herd. No doubt many of the young females we are offering will turn out to perform as well as, or better than some we are keeping ourselves! Clients purchasing these females in the past 6 years have been very satisfied with their performance and each year we have had many repeat buyers. We offer these females for sale with complete confidence, and in particular the annual draft cows are true capital stock having done up to 10 years on the hill, survived droughts and snowstorms, without ever being fed supplements. These J cows include the second year of daughters born to our most influential sires F540 and Crump, and carry industry leading maternal and fertility traits with tremendous longevity. They also include the first daughters of Goldwyn 017 who is also a trait leader for fertility and has IMF in the top 1% for the breed.

As you read this catalogue it will become clear that the animals that perform the best in our environment are of a similar type – strong rib fat levels drive our programme forward for two reasons. It is strongly linked to fertility, early puberty and the ability to calve early and re-breed early over a lifetime. Secondly, it is the energy store the females use to get through the feed shortages and extended stress periods all too common in this harsh environment. It is significant that the average rib fat EBV of all females on offer is +2.6 ranking them in the top 15% for the breed. The average for the all-important fertility trait of short-days-to-calving at -5 days also ranks the sale females in the top 15% for the breed. High-growth females do not work well in our hill-country environment and you will see few in the catalogue, as over time they have failed to perform and so have dropped out of the herd.

All cattle offered have been scanned in-calf by Aorangi Vets Ltd. All dry cows have always been culled at Meadowslea. We individually mate all stud cows, with one bull per mob initially and change bulls over after approximately 30 days. Each cow or heifer is individually assessed and her mating sire carefully selected to optimise her conformation as well as her EBVs, so as to enhance her progeny's suitability for the hill-country environment.

In 2021 we had 215 stud heifer calves born. We mated 210 as yearlings in 7 different mobs selected on pedigree, performance and type. Some mobs were single mated other had 2 yearlings in the second cycle. The result was a 95% conception rate and is a tremendous endorsement of the emphasis we place on the key fertility and maternal traits that are the main drivers for profitability in any beef herd.

FOREWORD

We undertake DNA parentage testing for all stud calves and purchasers will need to do the same if they intend to register or generate EBVs on the progeny.

This is the seventh year we have offered our stud females to the industry, and almost all sires used are unique in the world to the Meadowslea herd. For stud breeders this is an opportunity to access out-cross bloodlines proven to be highly productive in the hill country, and for commercial clients the option to gain access to genetics that would not normally be available in their herds for 3 more years. From our perspective, the more of these bloodlines that are available in the industry here in NZ, the better the chances are of us being able to source sires that fit our breeding programme; a task that is becoming increasingly difficult with the NZ Angus gene-pool now so heavily influenced by genetics sourced from the USA and Australia. Feedlots drive most of the selection criteria for these imported genetics making them, in our experience, unsuitable for our NZ grass-fed sustainable hill-country production.

The mating date for the R2yr Heifers was **November 20th**, and the older age-groups was **December 10th**

We wish you well with your purchases and stand behind these cattle 100%.

Regards,

David Giddings

NEW SALE SYSTEM CELEBRATES ITS 3RD YEAR OF SUCCESS

Yourbid, the online Helmsman auction system developed by Meadowslea Genetics of Fairlie, celebrates it's third birthday with the stud's upcoming In-Calf Angus Female Sale on May 3rd.

The stud holds 7 on-farm sales a year across their sheep and Angus cattle breeding operations, including the annual in-calf sale in early May. In 2020, this date fell within NZ's Level 3 Covid lockdown, during which no crowds or gatherings were permitted, making an outcry auction impossible.

With feed supplies tight and meat processing capacity limited, deferring the sale really wasn't an option either, meaning the only way forward was to hold it online. After looking at the various options available, the Meadowslea team decided to design their own from the ground up.

After running helmsman sales for many years for ram sales and in-lamb ewe sales previously, David and son George Giddings could see how an online helmsman sale would work very well for stud stock. They were able to provide a webdesigning friend with a specific brief, and a week or so later Yourbid came into being. The sale was very strong, with spirited bidding from around New Zealand, despite no buyers being in attendance at all.

Since that first sale in 2020, Meadowslea have run 20 successful sales for their own stock, as well as a number of sales for other stud breeders in NZ and Scotland. The system has proven very popular with stud-stock buyers, giving them the extra time to consider their purchases carefully, and the option of buying in choice order rather than lot number order.

As well as that first female sale, Meadowslea has run 2 bull sales, an online semen sale, and 3 ram sales on Yourbid. Yourbid has been used very successfully for studstock sales in Scotland, and the Giddings family have received enquiry from breeders keen to use it from around New Zealand as well as in Australia, France, the US and as far afield as Romania. 3 other ram breeding operations have used it in New Zealand this summer, with a number of bull sales confirmed for the upcoming season and many more interested in switching to it over the next few years.

Online helmsman-style auction

Yourbid works as a Helmsman-style auction - meaning all lots are offered for sale simultaneously.

Other online livestock sales platforms in New Zealand use the traditional sequential auction model, whereby each lot is sold one at a time, one after the other. Yourbid uses the "Helmsman" style of auction. This means that all the lots on the sale are open for bidding at the same time, which is helpful for both buyers and sellers, particularly when conducted online. Bidding is also kept open over a period of several days, rather than the minute or so per lot of a conventional auction.

A key difference of this platform compared to any other the developers have seen is the bidding screen which shows the current prices of all lots simultaneously. Reserve prices are shown in red for a start, this changes to blue once the first bid is received, and the buyer number of the current leading bidder is displayed. New bids are highlighted in orange for a minute. Buyers who are logged in on their own device see the lots they hold highlighted in green. This gives an instant overview of the auction so anyone can see on which lots the activity and interest is, making it easy to establish their relative market values.

All online models have some level of time delay between when events happen on-site and when they are seen by remote buyers. For a traditional sequential auction a delay of 15-20 seconds can be very significant, when each animal might only be in the ring for 90 seconds or so. By keeping the entire auction open for a longer period of time this problem is mitigated significantly. It also means sales will not be affected significantly by any temporary technological glitches.

Giving buyers time

Selecting seedstock is a major decision for sheep and beef farmers, and one which will have ramifications on their operations for years to come. People need time to gather and process information to make decisions. This is even more important when buying remotely, when information gathering is more difficult and takes time – meaning remote buyers are significantly disadvantaged at an online sequential auction. The Yourbid system gives buyers this extra time, and

by integrating the bidding on the website alongside the online catalogue, videos of each lot and a live commentary, this information is readily available to buyers. Rather than turning up on a given day and viewing all the animals in that tight time-frame, buyers can go through the catalogue, view the videos, make selections, and bid at their leisure from home over the period of several days the sale is open.

Bidding order of preference

Another advantage of a Helmsman-style auction is that it allows buyers to bid on stock in the order of their preference, rather than the catalogue order. For instance, as a buyer you might be interested in lot 8 and lot 12. At a traditional auction, lot 8 comes into the ring and isn't selling for too much, however lot 12 is your first preference so you decide to wait for that animal to come into the ring. Lot 12 comes in, sells for too much money, and you can't go back and bid on lot 8 because that animal is sold. Under the Helmsman system buyers can chop and change throughout the bidding. Meadowslea have analysed the bidding data for the sales they have run already, and it is obvious that a lot of buyers will bid on a certain lot to a particular level, then change to another lot, then perhaps go back to the first, or move onto a third animal they like. Some buyers bid on as many as 8 different animals to get the one they wanted – in a conventional auction they would have missed out completely or ended up with one that wasn't in their top-10 at all. By running the auction over a longer period, those who missed out on their first choice were able to go back through the videos and catalogue (or back through the pens for those who were actually onsite) and pick another animal they were satisfied with.

Integrating on-farm and online bidding

Integration of on-farm and on-line bids is crucial to the success of a platform like this. This system works by having large TVs on-farm displaying the bidding screen. Buyers on-site can bid through their smart phones, and those bids are displayed in real time. Some buyers will still prefer to attend on-farm and bid using pieces of paper as per a traditional Helmsman sale – they write their buyer number, their lot number, and the bid price on a piece of paper and hand it in – they are able to enter this directly into the online system so it shows up on-screen in real-time as well.

Engaging with potential buyers

By providing a live-chat on the platform, potential buyers are able to ask questions, request another closer view or more information about a particular lot, and even send through jokes and one-liners. Online videos and the livestreamed commentary are produced through Facebook Live. All this makes for a much more engaging and entertaining environment for the buyers, compared to what many feel are the sterile and austere atmospheres of some of the other established online platforms.

Yourbid invite enquiry from breeders, agents and commercial farmers interested in using the platform, and envisage it becoming an independent platform able to be used by all industry players.

All enquiries to george@yourbid.org or call **David 027 2299760**

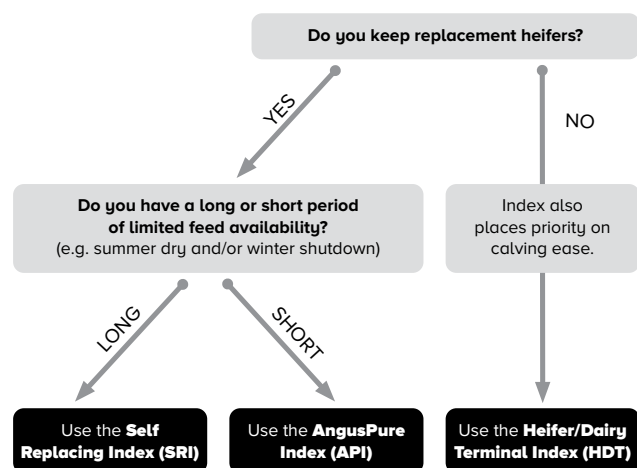

ANGUS NZ EBV's Explained

TransTasman Angus Cattle Evaluation (TACE) EBVs and selection indexes remove the effects of non-genetic factors (e.g. feeding regimes, animal age) from what is seen and measured to provide the best measure of an animal's genetic merit. BREEDPLAN information should always be used in conjunction with other selection criteria, including visual assessment.

A BEST PRACTICE GUIDE TO SELECTING YOUR NEXT NEW ZEALAND ANGUS SIRE

A TACE Guide to Animal Selection allows you to select the best genetics for your herd in four easy steps:

Which New Zealand Angus Selection Index should you use?

1. Identify the **Angus New Zealand selection** index of most relevance to you.
2. **Rank animals** using the chosen selection index.
3. Consider the individual EBVs of importance.
4. Consider other traits of importance (e.g. visual assessment).

The majority of these steps can be undertaken online, allowing you to generate a shortlist of bulls for potential purchase ahead of sale day. The searchable version of this catalogue can be found online here www.angusnz.com.

TRANSTASMAN ANGUS CATTLE EVALUATION

A TACE Guide to Interpreting EBVs outlines how to assess and compare the genetic merit of animals. Please note that only EBVs from the same TACE analysis can be directly compared. The New Zealand Angus Association publishes the following TACE EBVs:

Calving Ease Direct (%): Higher (or more positive) CEDir EBVs indicate that two year old heifers will have less difficulty when calving this sire's progeny.

Calving Ease Daughters (%): Higher (or more positive) CEDtr EBVs indicate easier calving of this sire's daughters at two years of age.

Gestation Length (days): Bulls with lower (or more negative) GL EBVs are expected to produce progeny with shorter gestation lengths. Such progeny are also expected to be easier calving.

Birth Weight (kg): Bulls with lower, less positive BWt EBVs are expected to produce progeny that are lighter at birth, with an associated lower risk of calving difficulty. This EBV is particularly important when selecting sires where there is an increased risk of calving difficulty (e.g. heifers, cross-breeding).

200, 400 & 600 Day Weight EBVs (kg): Bulls with larger (or more positive) Weight EBVs are expected to produce progeny that grow faster to 200, 400 & 600 days of age, respectively. The Weight EBV of particular importance will depend on the target market e.g. vealer (200 D), yearling (400 D) or heavy steer (600 D).

Mature Cow Weight (kg): Bulls with larger (or more positive) MCW EBVs are expected to produce daughters with higher mature cow weights and increased feed requirements. More moderate MCW EBVs are generally more favourable in self replacing or maternal production systems.

Milk (kg): Bulls with higher (or more positive) Milk EBVs are expected to produce daughters with more maternal ability leading to higher 200 day weights in their progeny. Selection for moderate Milk EBVs may be preferable in harsher environments as cows with higher Milk EBVs can have impaired fertility and decreased survival under such conditions.

Scrotal Size (cm): Bulls with larger (or more positive) SS EBVs indicate better semen quality and quantity. Daughters are expected to be more fertile and reach puberty at an earlier age.

Days to Calving (days): Bulls with lower (or more negative) DTC EBVs are expected to produce daughters that are more fertile and have a shorter interval from bull-in date to calving.

Carcase Weight (kg): Bulls with larger (or more positive) CWt EBVs are expected to produce progeny with heavier carcass weights.

Eye Muscle Area (sq. cm): Bulls with a higher (or more positive) EMA EBV are expected to produce progeny with better muscling.

Rib and Rump Fat EBVs (mm): Bulls with higher (or more positive) Rib & Rump Fat EBVs are expected to produce fatter progeny, relative to carcass weight. The desire for more or less fat will depend on the finishing ability of your animals.

Retail Beef Yield (%): Bulls with higher (or more positive) RBY EBVs are expected to produce progeny with higher yielding carcasses.

Intramuscular Fat (%): Bulls with higher (or more positive) IMF EBVs are expected to produce progeny with more marbling and better grading scores (e.g. MSA).

Docility (%): Bulls with higher (or more positive) DOC EBVs are expected to produce more progeny with acceptable temperament.

For more information on **using and understanding TACE EBVs & information**, including the BREEDPLAN Guides, scan the QR code.

SELECTION INDEXES

The New Zealand Angus Association currently reports three different selection indexes. These are the:

- Self Replacing Index
- AngusPure Index
- Heifer/Dairy Terminal Index

Each selection index is reported in units of net profitability per cow mated (\$), and relates to a commercial herd using Angus bulls. Each selection index is focused on efficient beef production, including maternal traits where appropriate. Scan the QR Code for more detail.

Comments: Recognised as one of NZ's most influential and long-lasting senior sires, he is still going strong at 14 years of age. Traditional NZ Angus hill country type with proven industry leading fertility, he has sired over 400 outstanding progeny which are always highly sought after. His grandson Meadowslea Mountain Man was the highest selling 2-year-old bull in NZ in 2020 and sons and grandsons have sold for up to \$85,000 at studs across the country and in Australia. His daughters are the top breeding females in our herd and are proving exceptionally fertile and productive in our hill country, resulting in him now being a breed trait leader for short days to calving at -10.2 days and a SRI index in the top 10% of the breed. He has a major influence in this sale with 42 daughters and granddaughters on offer, including his 10-year-old daughters which are a feature of the sale.

Comments: F540 continues to have the biggest impact on our herd of any bull we have ever bred with exceptional longevity at now 13 years old. Deep, thick, easy-doing sire with exceptional production figures for hill country. He has strong maternal and fertility traits and is a trait leader for both short gestation and milk. Meanwhile his short days-to-calving and calving ease feature in the top 10% for the breed. His daughters are outstanding in the herd, weaning thumping calves while maintaining their condition all year round, a real testament to his rib and rump fats which rank in the top 5% of the breed. He features strongly in this catalogue with 32 daughters and granddaughters offered, including daughters now 10 years old.

Comments: The top Goldwyn bull of his year and purchased for \$13,000. A son of the widely-used Te Mania Infinity and out of the top price cow at the Goldwyn stud dispersal sale. He is passing on very strong fertility traits and this is reflected in his daughters' conception dates, resulting in him becoming a trait leader for short days-to-calving at -8.6 days and helping him get a self-replacing index in the top 5% of the breed. The first of his daughters have through to 10-year-olds and he has numerous granddaughters in the sale all exhibiting his exceptional IMF, which at +4.1 ranks him in the top 1% for the breed.

Comments: There is no doubt why we named this fellow 'Meat Machine', and he is fast becoming an all-time favourite sire. We now have over 180 progeny, and he is having a huge impact in the herd. He leaves terrific thickness and depth with great hindquarters. He passes on the easy-doing ability we value so strongly and this shows in his exceptional rib and rump fats which are almost off the scale for the breed. He is a trait leader for calving ease at +10.1 with super low birthweight in an early maturing, moderate frame. We believe he is the true Angus hill-country type and this is endorsed with an SRI index in the top 5% for the breed. He features strongly in the catalogue with plenty of daughters and granddaughters on offer.

Comments: This son of G914 is out of one of the top 10-year-old Turihaua Crump cows sold in last year's sale and is bred to be thick as a brick. He has maternal and fertility traits that are exceptional, with calving ease, low birthweight, and short days-to-calving all in the top 10% for the breed. Meanwhile his rib and rump fat EBVs are off the scale. His progeny have always scanned so well his EMA has jumped from +2 to +6.2. His progeny are all of the moderate efficient type resulting in him generating a SRI index in the top 1% for the breed. We believe any high country farmer - and his bank manager - would love to have a herd of cows from this bloodline! He is the sire of some classy females on offer and also has many granddaughters throughout the catalogue.

Comments: This top son of the Rangatira 13-38 (the \$100,000 bull) was sold at lot 10 in the 2018 sale to Peak Hill Station for \$17,000. He has a very good pedigree, being out of a top Crump cow who is also the mother of our stud sire L226. We retained a share in this bull, and his first crop of R4-year daughters are on offer, which look like they will make terrific cows. He is a very powerful bull and is leaving progeny with tremendous depth, thickness, real volume and capacity with very strong growth.

Comments: We retained this sire in 2019 and rate him as possibly the best Turihaua Crump son ever! He is out of a top-performing Glanworth 16 cow who was sold in our 2021 Female Sale to Australia for \$9,300. She also bred our top price bull in 2018 - M429, sold to Red Oak Stud for \$18,000. The first of the N166 sons were the standout feature of our 2022 bull sale including "Meadowslea Mountain Man" selling to KJ Angus for \$92,500 and achieving the top price in NZ for a 2-year bull in 2022. His progeny display exceptional quality with terrific power and strength. He has some exciting daughters on offer and also features as a mating sire throughout the catalogue.

We are very excited by the first 2-year-old progeny from our new sire purchased in 2020, Turiroa Panther - named for his superbly balanced walking ability. He has a top pedigree, being out of a top-performing cow at Turiroa Stud, from their embryo transplant programme. Her sire is our own Turihaua Crump, and she is a full sister to Turiroa Maverick who bred so well at Rangatira Stud and featured strongly in their recent dispersal sale. Panther is deep, thick, and square with an exceptional hindquarter and terrific easy doing fats in a moderate frame. His figures have moved forward with the first of his progeny showing exceptional growth to 400 day in the top 10% for the breed. Combined with his strong fertility with short days to calving in an efficient moderate frame, he generates a self-replacing index in the top 1% for the breed. The first of his 2-year-old daughters are a feature of the offering and he was mated to top females throughout the catalogue.

Comments: P565 was our top keeper bull in 2020. He was a standout as a calf, and with his exceptional depth and thickness he was our first choice to mate over stud heifers as a yearling. He has a top pedigree being a son of the well-known Taimate Lazarus, and out of a top 10-year-old cow G943 who was sold in our 2021 Female Sale to Piko-Burn Angus. P565 has good calving ease, short gestation with moderate birth weight, and very good scrotal. The first of his sons were very impressive in our 2022 bull sale including lot 1 sold to Red Oak Stud for \$19,500. He has some very impressive 2-year sons that will be standout bulls in our upcoming 2023 bull sale. He has 2-year daughters on offer and has been mated to some very good cows in the sale and followed up the AI programme as well.

Comments: We retained P700 in 2020 after using him over stud heifers as a yearling. He was one of the many outstanding sons of L226 and we selected him for his strong fertility traits and compact moderate frame packed full of meat. He excels in all the traits we value in the hill country with calving ease, low birth weight, and efficient moderate cow size. He has exceptional fertility traits with scrotal size, short days to calving, and rib and rump fats all in the top 10% for the breed. The first of his progeny scanned terrifically well for IMF ranking him in the top 2% for the breed. His mother is a lovely moderate framed 11-year-old cow sold to Albert Hill Angus for \$3,900 in last year's sale. He has some outstanding 2-year sons used as mating sires in this catalogue as well as 2-year daughters on offer. He is also a mating sire in this catalogue.

Comments: We purchased this Taimate Lazarus son as a yearling for \$9,000 to use in our heifer mating programme. We selected him for his depth of body, strong hindquarter, and clean shoulders, and were so impressed with him that he has been used to mate top adult cows as well. His figures fit well with our emphasis on maternal and fertility traits and he ranks in the top 10% of the breed for calving ease, low birthweight, short days to calving, and moderate cow size. His carcass data shows strong muscle, good rib and rump fats as well as IMF. This combination of performance figures generates a Self-Replacing Index at the very top of the breed at +\$176. He has some impressive R2-year heifers in the catalogue and an impressive son S108 used as a mating sire.

Comments: Q178 was our top keeper in 2021 and we rate him as one of the best bulls we have ever bred. He is a son of Rangatira 16209 who bred an outstanding line of bulls for us in the 2021 Bull Sale, with sons selling to \$32,000. He displays exceptional depth of body, with a powerful head, bone, and very good feet. He has a superb hindquarter and wonderful temperament. He has a good balance of figures for hill-country with strong fertility - recording a scrotal in the top 5% for the breed with short days to calving - while his important rib and rump fats are in the top 10%. This bull has attracted intense interest with strong semen sales to some of the leading studs in NZ. He has been mated to some of the top heifers and cows in this catalogue.

Comments: Q250 was also retained in 2021. He is a son of our high-performing sire M564 and a grandson of our record price cow G1000 who was sold in our 2021 Female Sale to Australia. Q250 is a lovely, well-balanced, moderate-framed bull who ticks a lot of boxes for hill country production. He has calving ease with low birthweight and moderate efficient mature cow size. His maternal and fertility traits are very strong with his milk, scrotal size, short days to calving, and rib fat all ranking in the top 10% for the breed. He has inherited the good EMA at +6.1 coming through from his record-priced grandmother G1000 and has IMF in the top 5% for the breed. A very sound bull with a great pedigree behind him used as a mating sire.

Comments: We purchased Rebel at the final Rangatira Bull Sale in 2021 for \$35,000. For us he was the standout bull in the catalogue, both for his pedigree and his moderate, sound, deep body type. His sire is the high performing Turiroa Maverick, who is a son of our own Turihaua Crump. His dam has bred exceptionally well, with a full brother to Rebel selling in the 2020 Rangatira bull sale for \$35,000. Rebel has all the quality and soundness attributes that the Rangatira herd was known for, and the first of his progeny as calves look impressive. We used him to follow up the AI in the 'R' age group.

Comments: Purchased at the 2021 Turihaua bull sale, Tornado is a lovely moderate framed, wonderfully sound, traditional Turihaua type of bull. He has exceptional structural soundness, and wonderful feet and legs to give longevity of production. He is strong in fertility with good scrotal size and exhibits strong muscle with a deep flank and very a good hindquarter. We see a lot of similarity to Turihaua Crump in this bull and very much like the look of the first of his calves on the ground. He has been mated to some good cows throughout the sale.

Comments: Purchased at the 2021 Turihaua Bull sale, Jupiter impressed us with his superb structural soundness, scoring an almost perfect 5 in the beefclass scoring system. He is a deep bodied, moderate framed bull with exceptional muscle, and this is supported with an EMA figure of +9.1 ranking him in the top 2% for NZ. He has the important fertility trait of short days to calving ranking in the top 5% for the breed and the easy doing fats we rate so highly in the hill-country. All this combined with a very moderate mature cow weight generates a SRI index in the top 5% for the breed. He was mated to a selection of cows on offer.

Comments: Purchased in May 2022 for \$81000, Rainstorme is the most exciting sire we have used at Meadowslea. He ticks all the boxes for efficient beef production on hill country and has generated widespread interest from stud and commercial breeders in both NZ and Australia, with semen and embryo sales of over \$80,000 recorded to date. Rainstorme has the unusual combination of data that is backed up by viewing the bull himself. His massive EMA is visible in his exceptional loin and his easy doing ability with his strong fats is very evident. His wonderful smooth shoulder confirms his calving ease and his massive scrotal is industry leading. He successfully mated 40 heifers naturally for a cycle, and then 40 cows for a cycle and a half, maintaining his condition superbly. He was also used extensively in our AI programme over both heifers and older cows. We have selected some top heifers and cows mated to Rainstorme as feature lots in this sale.

Comments: We purchased semen from Taimate Roy after viewing the bull at Xcell breeding centre. We felt he combined Genotype and Phenotype in a very tidy package, maintaining depth of body and giving exceptional growth from a low birthweight. He adds great EMA to a mating programme and we have selected some feature lots to offer, that should produce some very exciting prospects.

Comments: R818 was the outstanding Meat Machine son from the 2020 calf drop and was sold in our 2022 bull sale to Jade Park Angus in Australia for \$23,500. The bull has remained at Meadowslea and we were very fortunate to be able to use him. He has developed tremendously, and his depth and thickness have impressed all who have seen him. R818 has exceptionally strong caving ease coming from the Meat Machine bloodline with short gestation and moderate birthweight. He has good muscle, with a very deep wide hindquarter, and a wonderful clean shoulder with great balance and outlook. R818 has the exceptional easy-doing ability we value so strongly with good rib and rump fats and volume and capacity to handle the hardest conditions and is really hitting his straps now. He appears as a mating sire throughout the catalogue.

Comments: R646 was retained in 2022 after being used as a yearling. His sire Meadowslea M429 was sold to Red Oak stud for \$18,000 and was son of the \$100,000 Bull Rangatira 13-38. The dam of M429 is the great old cow G922, who is also the dam of Meadowslea N166, and was sold to Ballanee Angus Australia for \$9,300. The dam of R646 is a great cow by KayJay Freedom I36 going back to Braveheart. R646 has tremendous volume and thickness with strong growth and terrific scrotal size. He has strong muscle and his fats are in the top 10% for the breed giving a wonderful easy doing ability. He has some outstanding calves on the ground and will be a sire to look for in the future. Used as a mating sire in this catalogue.

Comments: R650 was retained in 2022. He has a very powerful pedigree, being a direct son of the \$100,000 Rangatira 13-38. His dam is a top performing 11-year-old cow H117 who was lot 105 in the 2022 female sale to Albert Hill Angus, and is also the dam of retained stud sire P700. R650 is a strong, deep-bodied, easy doing, moderate framed bull. He has the efficient low mature cow size with good scrotal size. His fats are in the top 2% for the breed and he scanned with good IMF. His data makes him very suitable for hill country production and he was used to follow the AI programme so will have mated some very good cows.

Comments: We purchased this bull at the 2020 Rockley sale as a yearling to mate stud heifers. We were attracted first to his fertility traits, which rank him as the highest fertility bull ever born in NZ for the combination of scrotal and short days to calving. His pedigree is very interesting with some of the great pure NZ bulls in the background including Pinebank 41 and Hingaia 469, as well as Kaharau Heritage 421. Rockley 41 has plenty of calving ease with very short gestation and low birthweight, followed by strong growth in a moderate frame. His carcass data is also impressive with good muscle, strong fats, and good IMF in the top 5% for the breed. All this exceptional data combines to generate a very good SRI index in the top 2% for the breed. An exciting prospect and mated with some very good heifers in the sale.

Comments: S116 has been a standout since weaning and was an easy choice to select to use as a yearling. His sire is Meadowslea Q223, who was used as a yearling himself before being sold in our 2021 bull sale to Riverlands J Angus where he has done very well. Q223 is sired by the top performing Rangatira 16209 and is a half-brother to our own retained stud sire Q178. S116 is out of a 2-year heifer by F540 and goes back to Meat Machine and Crump, so incorporates all our leading bloodlines. He is deep, thick and square with a top hind-quarter and terrific structural soundness. He has calving ease with moderate birth weight followed by strong growth. His fertility is strong and his easy doing attributes show in his good fat levels in the top 20% for the breed. He will be a top pick in the June bull sale line-up. He was used to mate heifers together with his half-brother S160.

Comments: S160 is a half-brother to S116 and was used alongside him to mate yearling heifers. His dam is a 2-year heifer by Goldwyn 17 who scanned with the best IMF of her year group. A top pedigree including Crump and F540. A very similar type to S116 with wonderful soundness and terrific quality, head, and bone. He has calving ease with low birth weight, strong growth, and fertility traits in the top 10% for the breed as well as IMF in the top 15%. A very impressive young sire.

Comments: S491 is a half-brother to S184 and was used together with S184 to mate stud heifers. S491 is very similarly bred to S184, being out of a 10-year Goldwyn 017 cow who is lot 130 in this sale, so he doubles up on IMF in his pedigree and ranks in the top 2% for IMF in the breed in NZ. He has calving ease with moderate birth weight and terrific fertility with a short days to calving figure in the top 2% for the breed. A very impressive, thick, easy-doing type with exceptional fats and strong index figures who will attract a lot of interest by bull sale time.

Comments: S184 is one of a top line of P700 sons we have for sale this year. P700 is leaving terrific IMF in his progeny and S184 has a double shot of high IMF with his dam being a daughter of Goldwyn 017 who ranks in the top 1% for IMF in the breed. S184 has strong data with great calving ease, short gestation and low birth weight. His fertility traits rank in the top 5% for the breed, his fats are in the top 10%, and his IMF in the top 1%. A thick, deep, easy-doing young sire who ticks a lot of boxes. Used to mate heifers together with his half-brother S491.

Comments: S402 was used to mate heifers together with his half-brother S186. Another of these deep, thick, easy doing Panther sons and out of a good cow family with grandam breeding a \$24,000 bull to Glanworth Angus. S402 has strong growth with exceptional fertility in the top 5% for the breed and once again shows exceptional fats which are off the scale. His strong performance across the page generates a very good SRI index in the top 5% and he will tick a lot of boxes by sale time.

Comments: S186 is the first of a top line of sons by our new sire Turiroa Panther, his dam is a great old 10-year-old cow sold in our 2022 female sale to Picton Park Angus. S186 has moderate birth and growth with strong fertility traits in the top 10% for the breed. His easy doing attributes are exceptional with fats off the scale and SRI Index in the top 5% as well as IMF in the top 10%. An impressively deep thick type who we used to mate heifers together with his half-brother S402.

Comments: S108 is a grandson of Lazarus and was used to follow-up Rainstorme to mate stud heifers. His dam is a smart young F540 heifer who was sold in our 2022 female sale to Stoneburn Angus. S108 has impressive data with calving ease, low birthweight, and impressive early growth with the moderate efficient cow size we are all aiming for. Incredible fertility with short days to calving in the top 1% for the breed and strong muscle and fats all combine to generate a SRI index in the top 1%. A smart young sire.

Comments: S141 is the first son of our Q178 retained in 2021. Q178 is a Rangatira 16209 son and we rate him as one of the best bulls we have ever bred. S141 is a strong bull with good growth, strong fertility, and easy doing fats. Like his father he has terrific depth of body and great structural soundness so we see a great future for this chap.

Comments: S178 is a direct son of the high performing Rangatira 16209. He displays all the quality and structural soundness of his father and has impressive maternal and fertility traits almost all in the top 10% for the breed, coming down from the Reality bloodline. His grandam is a good 10-year-old Reality cow at lot 127 in this sale. With good muscle and easy-doing fats this chap will be a stand-out by bull sale time. Used over yearlings to follow S116 and S160.

Comments: S168 is an impressive, deep-bodied young sire we used to mate heifers and follow-up Rockley. His sire was used as a yearling and later sold to Emma Gardiner for \$18,000 and we have continued to use him in the AI programme. He comes from a very good dam line with his grandam a cracking 10-year-old Crump cow in this sale at lot 118. S168 has calving ease with low birth weight and very strong fertility traits. His easy doing fats are clear to see and rank in the top 5% for the breed. A lovely smooth meaty bull.

Comments: To lead off the 2023 female sale we have selected a beautifully balanced heifer by N166, sire of NZ's top price bull in 2022. Dam bred a stud to Okaka Angus as a 2-year old heifer. S327 has a lovely clean shoulder, terrific top line, and rich quality coat. Plenty of width and depth in the hindquarter and a nice moderate frame. Good fertility in the top 15% for the all-important short days to calving. A quality heifer in-calf to the \$81,000 Kincardine Rainstorme.

60%	43%	63%	61%	65%	64%	60%	59%	

Comments: Another beautifully balanced, clean-shouldered, upstanding heifer with tremendous top line, and style about her. Sired by L226 she has calving ease with low birth weight and plenty of growth, with good muscle and IMF in the top 15%. Out of a very good 10-year-old cow sold in our 2022 female sale to Albert Hill Angus who had previously bred a stud bull to Turihaua. Very sound with lovely quiet temperament and quality throughout. A top mating prospect to Rainstorme.

Comments: A Turiroa 14830 daughter going back to Braveheart and out of a great 10-year-old cow who bred a retained stud sire L106. A nice balance of figures here with good growth and strong fats as well as the biggest actual EMA and IMF. Upstanding, well-balanced heifer with clean shoulders, a great skin and a rich coat. A quality heifer with depth of body this is another top prospect. Mated to Rainstorme which will really double up that muscle!

Comments: A strong heifer with a bit more scale about her. Sire Q141 was used as a yearling then sold to Glanworth Angus for \$24,000. Dam was a good old 10-year-old cow. Strong growth with a terrific short days to calving figure in the top 1% for the breed, and fats and IMF in the top 10% as well. She displays the same balance and style as the rest of this pen. In-calf to Rainstorme once again.

Comments: Offered on account of Ballanee Angus, Australia. Dam G1000 topped our 2020 Female sale and was sold into an embryo programme. After spending 5 months at the AI centre as a calf and missing weaning, S499 has really come on! Thick, deep, and square with a tremendous coat she has great soundness and real quality. Strong growth with 400- and 600-day EBVs in the top 15% of the breed, as well as IMF in the top 10% and the 5th best actual scan. Will be another terrific mate to Rainstorme.

Comments: A daughter of the \$32,000 Woodbank bull. Very well balanced with clean shoulders and a good backend. Mother H134 was sold in our 2022 Female Sale to Albert Hill Angus for \$5500, having previously bred a stud bull sold to Turihaua and 2 other top bulls. Very good data with an SR Index in the top 25%. Strong calving ease, short gestation, low birthweight, milk, days to calving, rib fat and rump fat all in the top 15-20%, as well as the second-best actual EMA. Will be a great mate for Rainstorme.

Comments: Great quality, skin and coat on all this next pen. Crump influence again with lovely top-line, quality head, and depth of body as well as his characteristic short days to calving which is in the top 15% of the breed. Good carcass data here too with EMA, fats, and IMF all very strong. Good heifer mated to R818.

Comments: Similar type once again, also from the Crump bloodline. Really good deep body, strong through the second thigh, with great skin and coat. Outstanding fertility with rib and rump fat both in the top 1% of the breed and good IMF to boot. Mother is a good Crump cow performing well. Mated to the Rangatira sons.

Comments: Very smart heifer here by P700, showing all the calving ease and low birthweight we expect. Incredible easy-doing type with incredible fats – the biggest rump fat in the mob- and IMF in the top 10% of the breed. Days to calving and milk are also strong with a very good moderate cow weight that gives an impressive self-replacing index. Grand-dam J422 is a top Reality cow in this sale at lot 116. Quality heifer in-calf to the Rangatira grandsons. Note some white.

Comments: Another P700 very similar to the previous heifer. Well balanced, a great top to her, and nice coat. IMF, fats, and days to calving are all in the top 5% of the breed which along with moderate mature cow size and good scrotal generates an impressive index. Grand-dam was a top-breeding Goldwyn cow who has produced 3 good sale bulls. Mated to R818.

Purchaser:

PRICE: \$

The Meadowslea hill-country type

Visual appraisal is still very important for selecting cattle to perform in hill - country

MASCULINE TRAITS - A strong head and jaw and thick neck indicate high levels of libido, testosterone and reproduction efficiency

NECK LENGTH - A thicker necked animal matures and reaches puberty earlier and has more libido

A longer neck indicates a higher maintenance animal that is slower to reach puberty and re-breed

HEART GIRTH - Large heart girth is an indicator of vigor and easy keeping ability

Small heart girth animals are more susceptible to stress, are higher maintenance and do not perform well on tussock

RIB FAT - Strong rib fat covers are the essential energy store for adverse conditions.

They indicate easy-doing and finishing ability and are directly related to increased fertility in both heifers and cows.

STRUCTURAL SOUNDNESS, FEET AND BONE - High country cattle cover large distances over rugged terrain so a strong skeleton is essential

HIDE - a good thick skin and coat is essential in the cold harsh environment

FLANK - Deep flanked animals are easier keeping, have more meat in the rump and have more maternal and reproductive efficiency

Higher flanked animals tend to be flighty, are higher maintenance and take longer to finish on grass

SCROTAL SIZE - Larger scrotal size at 12 months indicates daughters will reach puberty earlier, be more fertile, and re-breed early every year.

BRED FOR THE HILL COUNTRY

The development of the Meadowslea hill - country type has been the result of 25 years of selecting animals that perform the best in our hash hill country environment. Cows that can winter easily on the hill without supplements, stay in good order, calve easily and get back in calf early every year for 10 years has been the focus of our breeding programme. By putting pressure on cows to winter on native hill blocks it quickly became apparent that some animals could manage well in this environment and would easily get back in calf the next year, while those that struggled would be too light going to the bull, and either calve later each year, or come through dry.

Those that were dry or were not holding their condition well enough were removed from the stud herd, while the "easy-doing" types thrived and passed their genetics on to the next generation. It was clear that it was the cows with good fat covers going in to the winter that were consistently performing the best in our environment.

Ultrasound scanning is performed on all yearling bulls in early spring, and on the heifers in the autumn. For us, the most important data is the rib and rump fat cover measurement - we have found these strongly correlate with those easy doing characteristics, and we now put a lot of emphasis on this when selecting bulls to use and heifers to retain. This is reflected in Meadowslea having some of the highest fat EBVs on the Trans Tasman Angus Cattle Evaluation.

These great positive fat EBVs in the Meadowslea herd have come about simply by selecting animals that suit the hill country environment.

Carcase Rib Fat (mm)

Graph showing improvement in fat EBVs at Meadowslea while running the herd on hill country, compared with Australasian average. From TransTasman Angus Cattle Evaluation, April 2022.

■ Meadowslea herd
● Australasian herd average

The average rib fat EBV of the females in this catalogue ranks in the top 15% for the breed in Australasia.

Comments: A quality heifer to complete this pen of very tidy medium-framed cattle. This daughter of P565 goes back to a great old Crump cow who was sold to Albert Hill Angus as a 10-year-old in 2022. She shows the real depth we would expect of that cross with a good coat. Exceptional fertility with scrotal size and days to calving in the top 10% of the breed, which together with very good calving ease, low birthweight, and EMA ensure a top index. Mated by AI to Rangatira 16209.

54%	33%	57%	55%	60%	60%	55%	53%	

Comments: Another of these consistently good P700 heifers. Thick, deep, and square with a nice coat and quality about her head. Good frame and capacity. Strong fertility again with days to calving in the top 10% of the breed as well as good fats and IMF. Mother sold in the sale last year to Stoneburn Angus. Mated to R818.

Comments: Another nice, moderate-framed, deep-bodied heifer with a good coat. Goes back to both Crump and F540. Really strong, easy-doing type with great fats. Tremendous maternal traits with days to calving in the top 10% of the breed and milk, rib fat, and rump fat in the top 5%. Another top mate to Rainstorme.

56%	38%	59%	56%	61%	61%	56%	54%

Comments: Nice well-fleshed, easy-doing heifer going back to the Goldwyn bloodline again. Nice upstanding type with plenty of width over the top and a deep flank. Dam J402 is lot 125 in this sale, and sire N157 was a Meat Machine grandson we used in the AI - as expected she has strong fertility traits with days to calving in the top 5% of the breed and good fats. Mated to the Panther sons.

54%	35%	57%	56%	60%	60%	55%	54%	

Comments: This P565 daughter is a real brick with tremendous depth and thickness. Real meat shows up with a great scan resulting in EMA in the top 15% of the breed. Calving ease, fats, and IMF are also strong, and together with a moderate mature cow figure give a good index. Grand dam H118 missed the sale last year and is still going in the herd. A late-born calf with real potential worth a close look! Mated to the Panther sons.

57%	36%	57%	57%	62%	61%	56%	55%

Comments: Another of these Rhinestone daughters, out of a Meat Machine cow which works well. Grand-dam H117 was one of the top old cows sold in 2022 to Albert Hill Angus at \$3900, and was herself the mother of P700 and our 2022 keeper R650. Dam bred top sale bulls sold to Greg Hand and Mt Gerald in 2021 and 2022. Rib and rump fat are in the top 5% of the breed with an impressive index. Clean shoulders with calving ease. Deep, solid, and well-balanced. Mated to Rockley.

Comments: Great R3-year heifer to start this offering. Shows all the depth and thickness we expect of the Meat Machine bloodline. Clean shoulders, wonderful width, depth, and thickness with a top backend and terrific easy-doing attributes. Strong index coming from her low birthweight, moderate cow size, days to calving in the top 5% of the breed, and rib fat well inside the top 1%. Grand-dam bred a stud bull we used as well as P504 sold to Matt McKenzie at \$15,000. In calf by AI to the high profile Taimate Roy. A top heifer.

54%	32%	57%	54%	59%	59%	54%	52%

Comments: Very attractive heifer here by the \$35,000 Woodbank bull. Terrific width across the top, depth of hindquarter, and length of body. Very sound productive type. Good calving ease and low birthweight, with strong scrotal and days to calving in the top 5% of the breed reflecting fertility. IMF is also in the top 5% and her rib and rump fats really are off the charts. Second best actual EMA with the top rib, rump, and IMF scan. Index in the top 10% of the breed. Mated by AI to R572, sold at lot 1 in the 2022 bull sale to Red Oak Stud.

Comments: Another very sound heifer by Woodbank. Similar type with the same width across the top and depth of body, a good quality heifer once again. Low birthweight, strong scrotal and rib fats with days to calving, IMF and self-replacing index in the top 10%. Weaned the 4th best calf in the group. In calf by AI to the outstanding Q178.

Comments: Big strong heifer here by M452, going back to the \$100,000 Rangatira 13-38. More scale and frame about her but still with great thickness and depth. Strong coat, a real powerful matron. Plenty of growth with a 600-day EBV in the top 10% of the breed. In calf to the promising young Turihaua Jupiter.

63%	52%	64%	64%	67%	67%	63%	63%	

Comments: Good quality Crump cow to lead this pen. Classic Crump body shape, great top-line, clean shoulder, depth of body, and strong hindquarter. Short gestation and low birthweight, with rib fat in the top 10% of the breed and incredible short days to calving ranking her right at the top of the Angus breed. Mother bred a top bull sold to Matt Mckenzie for \$17,000. AI mated to Rainstorme which will complement her figures very well.

Comments: Another Crump daughter cut from the same cloth. Tremendous thickness and depth with wonderful quality throughout, a great coat, balance and outlook. Had twins in 2016 and has bred \$25,000 worth of bulls so far. IMF in the top 20%, rib fat in the top 10%, and short days to calving right up there inside the top 1% of the breed. Mated to P565.

Comments: Strong Reality cow here with a bit more frame, along with tremendous depth, a strong backend, and the clean shoulder Reality is known for - a top cow in every way. Has produced a top yearling to Stu Millar in 2022, a good 2-year-old bull to Malcom Roy, and a top heifer sold to Stoneburn Angus last year. Calving ease in the top 10%, fats in the top 25%, and IMF in the top 30%. Mated naturally to Q178 which will be a great mate for her.

66%	50%	67%	64%	69%	68%	63%	62%	

Comments: Another very good, deep, moderate framed cow. Terrific top-line, width across the top, and deep body. Thick and square with easy doing fats in the top 1%. Tremendous fertility as well with days to calving at -7.2 days, ranking her right at the very top of the breed. Her IMF figure of +3.3 ranks the top 10% as well. All this data combined with her efficient moderate frame size generates an SRI index in the top 10%. She is breeding well with a very good 2-year daughter sold to Westfield Angus in our 2022 female sale. Exciting mate to Taimate Roy.

Comments: Another classic Crump daughter. Good top-line, well balanced, good head and real quality about her. Good fertility with fats in the top 5% and a days to calving figure right at the top of the breed. IMF is also strong and had a good calf this year. Bred a good bull to Mt Cook Station and has a daughter in this sale at lot 66. Mated naturally to Rainstorme.

Comments: Another classic Crump starts this next pen. Very well balanced, properly put together with a good coat, nice top-line, good quality and head. Balance and style about her. Produced the best calf in this age-group this year. Strong rib fat in the top 5% and outstanding days to calving in the top 1%. Had a good son sold to Chris Hampton in 2021. Mated to Turihaua Tornado.

Comments: A well-balanced Goldwyn cow with a nice top-line, good length, and plenty of width across the top. Low birthweight, strong milk figure, IMF and fats in the top 5% of the breed and outstanding days to calving again. Second heaviest calf this year, she previously produced top bulls sold to Mt Potts, Shane Matthews at \$14,000, and Jock Russell at \$10,000. She is the mother of S491, one of the yearling mating sires in this catalogue. Her first calf as a 2-year heifer was L179, sold as a yearling to Red Oak Stud where he bred very well. Mated by AI to Taimate Roy.

14 DAYS FREE COVER. NO BULL.

We want to ensure you get the very best cover on sale day and the best service every day after that. That's why we offer to insure your bull purchased at any **FMG Premier Bull Sale** for 14 days free* from the fall of the hammer.

Extend your cover. All bulls purchased at auction up to \$50,000 can be insured for 6.5% of the purchase price on a 12-month policy. You can choose to extend your 14 days free insurance on the Purchaser Instruction and Insurance Slip. For terms less than 12 months, different rates apply.

So talk to your FMG Rural Manager about FMG Premier Bull Sales Insurance.

* Subject to standard underwriting criteria. Please note this is only a summary of FMG products and services and is subject to our specific product documentation. For full details, refer to the relevant policy wording at fmg.co.nz/livestockpolicy

We're here for the good of the country.

FMG
Advice & Insurance

FMG Premier Bull Sale Insurance

What is FMG Premier Bull Insurance?

FMG provides automatic insurance for all bulls auctioned at an FMG Premier Bull Sale up to the value of \$50,000 for 14 days at no cost to the purchaser. For any bull purchased over \$50,000 talk to an FMG representative.

What is the length of cover?

You will automatically be insured for the specified bull for 14 days. You also have the option to extend the length of insurance to 12 months. Simply tick the “Extend your Premier Bull Insurance” option on the Purchaser Slip. The specified bull is then insured for the remaining period of 12 months at 6.5% of the purchase price. If you would like to discuss an alternative timeframe, please have a chat with your local FMG representative.

You don't have to pay today, FMG will invoice you for this additional cover.

What are the benefits?

✓ <i>Infertility</i>	Cover if your specified bull has to be euthanised due to permanent infertility caused by certain accidents, disease, or illness.
✓ <i>Theft or death</i>	We cover your specified bull for theft or death caused by certain accidents, disease, or illness (including while in transit anywhere in New Zealand).
✓ <i>Vet costs</i>	We cover up to \$500 for treatment of your specified bull to prevent death.

What will FMG pay?

FMG will pay the fair market value of your specified bull, less any amount you receive for the sale of the carcass, up to the amount shown on the insurance certificate.

FMG Purchaser Instruction and Insurance Slip

This slip **MUST** be fully completed and handed to the Booking Clerk before leaving the sale.

^ Required to correctly identify you once cover is issued.
