

# MEADOWSLEA ANGUS 5<sup>TH</sup> ANNUAL FEMALE PRODUCTION SALE

**ON-LINE AND ON-FARM  
MAY 5<sup>TH</sup> 2021 – 1PM**

[www.meadowslea.co.nz](http://www.meadowslea.co.nz)

MEADOWSLEA  
ANGUS & SHEEP GENETICS

## OFFERING:

**52 R2yr Stud Angus Heifers**  
**20 R3yr Stud Angus Heifers**

**16 R4yr Stud Angus Cows**  
**20 Annual Draft Stud Angus Cows**

# FERTILITY AND MATERNAL TRAITS the key to profitability in any herd!

**M**eadowslea stud cows winter on unimproved native tussock blocks without supplements being fed. This challenging environment tests the ability of the pregnant cow to maintain condition through periods of winter feed shortages. It is the energy stored in her rib fat levels that enable her to survive, thrive, and ultimately get back in calf and rebreed each year.

**D**ays to calving is a crucial fertility trait that measures the number of days from when the bull is let into the mob until the cow calves. This identifies cow families that calve early every year. Those earlier calves will always be heavier at weaning, and selecting for short Days to Calving will reduce later born calves and allow higher conception rates in a shorter mating period.

**"At Meadowslea we have always had some of the highest rib fat levels in the Angus breed. The importance of these fat levels is now recognised with our cattle now having some of the shortest days to calving EBVs in Australasia."**

*David Giddings*

## GOOD FAT COVER AND EASY-DOING ABILITY

Meadowslea stud 18mth in-calf heifers showing good fat coverings and ready to winter on the hill.

Meadowslea cows and calves come down off the hill for weaning.

**A** cow's condition and her ability to lay down fat in times of surplus, and to draw on that fat as an energy source in times of feed deficit is vitally important. This rib and rump fat is the cheapest and most efficient energy store on the farm, and will determine the ability of the herd to get back in-calf and rebreed early after a hard winter or difficult spring.

**A**ll Meadowslea yearling heifers are mated and any dries culled. After calving these heifers are run in mating mobs together with mixed age cows and expected to get back in calf early, rear a good calf off the tussock, and stay in good order. This is a tough ask for a first-calver, but this year that age-group scanned with a terrific 97% back in-calf rate!

**A cow going into winter with good fat coverings carries an energy store on her back equivalent to approximately 2 bales of baleage.**

**The Meadowslea herd has natural rib and rump fat levels amongst the highest in the breed in Australasia – acknowledged as a key trait for fertility in the harsh environment.**

## HELMSMAN STYLE AUCTION

Wednesday 5th May - 1.00pm

### Sale Format

The sale will be conducted as a Helmsman-style auction, meaning that all lots are for sale simultaneously. This is to allow for the participation of those in attendance, as well as those online. The sale will be hosted on our own **yourbid** platform and accessed through our website [www.meadowslea.co.nz](http://www.meadowslea.co.nz). Prior to the sale, all lots will be filmed and available for viewing up until sale day on the Meadowslea website.

**Bulls are available for viewing in the paddock anytime** – just call 0272299760 to arrange a time.

**Registration for those in attendance** will be at the on-farm office, where a copy of the conditions of sale will be posted.

**Registration for those online** will be through the Meadowslea website, where the conditions of sale will also be available.

**Buyers** will receive a buyer number as they register which will accompany each bid. Buyers registering online will receive a buyer number in their email which will automatically accompany each bid they place, whether they do so at home on their computer, or through their smart phone while in attendance. Those in attendance may also bid by writing on the supplied bidding cards and handing them in to the auctioneers. All live bids and all lots will be visible at all times, both online and on a big screen on-farm.

**Online registration is available NOW** and we encourage everyone to visit our website [www.meadowslea.co.nz](http://www.meadowslea.co.nz), to register, and then place practice bids on the demonstration lots on the auction page.

**The Online Open Day** video will be released on our website and on Facebook on Wednesday 28th April at 7pm. This video will include footage of every bull in the catalogue with expert comments from genetic specialists and will be available for viewing right up until the sale.

**Online bidding** will be open from 7pm on Wednesday April 28th until the conclusion of the sale.

**On Sale Day**, May 5th, the on-farm registration and bidding will open at 11am.

**Livestreaming with interactive viewing** will commence at 12.30 pm with a walk through of all the pens with commentary from the vendors and genetic specialists. Requests to review particular cattle can be made through the comments section of the web-site chat room or by telephone or text to the vendors or stock agents in attendance. This will continue throughout until the conclusion of the sale.

A live screen on the website will show all lots alongside their current prices and the buyer number of the bidder who holds that lot. On-farm attendees will be able to view on a big screen on site. Bids will be displayed on a computer or smart phone screen in the following colours:

**A live screen on the website** will show all lots alongside their current prices and the buyer number of the bidder who holds that lot. On-farm attendees will be able to view on a big screen on site. Bids will be displayed on a computer or smart phone screen in the following colours

**Example:**

**\$2500** Displayed in Red denotes the Vendor's reserve and indicates there has been no bid

**\$3000** Displayed in Blue means an active bid has been received

**\$3500** Orange highlight indicates a new Bid has been received within the last 2 minutes on this lot

**\$3500** The holder of the leading bid will have the lot number highlighted in green on their computer or their smart phone

**The sale will run until 2pm on May 5th.** After this time the sale will conclude once there has been a period of at least 2 minutes without a bid being received on any lot. If another bid is placed on any lot during the 2-minute period, then time is extended and bids can be received on all lots for a further 2 minutes. This process will be repeated until a clear 2 minutes passes without any bids on any lot at which time the sale will conclude.

**Final Time** will be called clearly by the commentary team who will use their discretion to ensure all bidders are satisfied.

All updates will be posted on our website, as will an up-to-date version of this document.

**Rebate purchasing Commission.** There will be no booking company in attendance and all purchasing companies will be responsible for booking of their own client's purchases.

1. 9% rebate commission paid to the nominated buying company, provided the vendor is advised of the purchaser's intention to buy prior to the commencement of the on-farm sale, or before the purchaser commences bidding online.
2. 3% rebate commission paid to the nominated buying company when the vendor has NOT been advised of the purchaser's intention to buy prior to the commencement of the on-farm sale, or before the purchaser commences bidding online.

# CONTACTS AND ANGUS EBV AVERAGES

# FOREWORD

Meadowslea Angus Stud was established in 1985 with the purchase of 6 capital stock heifers from the well-known Turihaua stud north of Gisborne. We have steadily expanded ever since to meet strong demand for bulls from the hill-country market we target – our belief is that an animal must first and foremost be suitable for the environment it is run in.

With the lease of a neighbouring property over the last 7 years we have taken the opportunity to increase the stud cow numbers further, and this year mated a total of 650 stud females. The demand for our bulls has steadily increased with 170 bulls sold at auction in 2020. Five years ago, with a confident beef industry and the lease block fully stocked, we held our very successful first annual female auction. We now plan to stabilise at 450 stud cows and sell a similar number, and age-group breakdown, every year going forward. The longevity, fertility, constitution, and structural soundness of our female cattle are crucial for us to present the number of females in this catalogue. We have very few dry cows and minimal losses to breakdowns or poor constitution because our cows are the right type to handle their environment. This means fewer replacements are required and more quality surplus females are available to sell.

At Meadowslea all yearling heifers are mated. The decision around which to sell and keep was made in February with relatively limited information on the young female cattle, since we did not yet know how they will perform in the herd. No doubt many of the young females we are offering will turn out to perform as well as, or better than some we are keeping ourselves! Clients purchasing these females in the past 4 years have been very satisfied with their performance and each year we have had many repeat buyers. We offer these females for sale with complete confidence, and in particular the annual draft cows are true capital stock having done up to 10 years on the hill, survived droughts and snowstorms, without ever being fed supplements. These “G” prefixed cows are the best age-group of cows we have ever offered and include the dams of our top keeper sires from the last 3 years. We have also sold over \$250,000 worth of bulls produced from this group of 20 cows over their lifetime! This truly is proven performance.

As you read this catalogue it will become clear that the animals that perform the best in our environment are of a similar type – strong rib fat levels drive our programme forward for two reasons. It is strongly linked to fertility, early puberty and the ability to calve early and re-breed early over a lifetime. Secondly, it is the energy store the females use to get through the feed shortages and extended stress periods all too common in this harsh environment. It is significant that the average rib fat EBV of all the females on offer is +1.6, ranking them in the top 10% of the breed in Australasia. The other important maternal traits of calving ease, days to calving, scrotal, and milk are generally all at very high levels throughout the catalogue. High-growth females do not work well in our hill-country environment and you will see few in the catalogue, as over time they have failed to perform and so have dropped out of the herd.

All cattle offered have been scanned in-calf by Aorangi Vets Ltd. All dry cows have always been culled at Meadowslea. We individually mate all stud cows, with one bull per mob initially and change bulls over after approximately 30 days. Each cow or heifer is individually assessed and her mating sire carefully selected to optimise her conformation as well as her EBVs, so as to enhance her progeny’s suitability for the hill-country environment.

In 2019 we had 180 stud heifer calves born, 2 died over the winter and all others were mated in 7 mobs of around 30 selected on pedigree, performance, and type. Each mob had 2 yearling bulls of the same bloodline, or one two-year-old, changed after a cycle. This resulted in a remarkable 98% conception rate with only 4 dry heifers. This is a tremendous endorsement of the emphasis we place on the key fertility and maternal traits that are the main drivers for profitability in any beef herd.

We undertake DNA parentage testing for all stud calves and purchasers will need to do the same if they intend to register or generate EBVs on the progeny.

This is the fifth year we have we have offered our stud females to the industry, and almost all sires used are unique in the world to the Meadowslea herd. For stud breeders this is an opportunity to access out-cross bloodlines proven to be highly productive in the hill country, and for commercial clients the option to gain access to genetics that would not normally be available in their herds for 3 more years. From our perspective, the more of these bloodlines that are available in the industry here in NZ, the better the chances are of us being able to source sires that fit our breeding programme; a task that is becoming increasingly difficult with the NZ Angus gene-pool now so heavily influenced by genetics sourced from the USA and Australia. Feedlots drive most of the selection criteria for these imported genetics making them, in our experience, unsuitable for our NZ grass-fed sustainable hill-country production.

### **Prime Carcase Data**

To assist clients wishing to focus on carcase quality we have included prime carcase data on each lot. This information is easy to present on our female cattle as their scanning date in February at age 15 months matches when our client's stock would also be prime and killable. We have researched the best information and advice from previous experience to predict animals most likely to achieve carcase premiums.

**Animals with rib fat of 7ml and above and marbling (IMF) of 5.5% and above at time of slaughter consistently achieve both Silver Fern Farms and Alliance premium Angus grades.**

This also shows the importance of rib fat to allow the animal to finish easily on grass and then lay down intramuscular fat which is the last fat to be produced as the carcase becomes prime.

It also shows that the very strong rib fat levels in our cattle are still well within the range of prime carcase grades.

**The mating date** for the R2yr Heifers was **November 20th**, and the older age-groups was **December 10th**

We wish you well with your purchases and stand behind these cattle 100%.

Regards,

David Giddings

# NEW SALE SYSTEM CELEBRATES A YEAR OF SUCCESS

Yourbid, the online Helmsman auction system developed by Meadowslea Genetics of Fairlie, celebrates it's first birthday with the stud's upcoming In-Calf Angus Female Sale on May 5th.

The stud holds 7 on-farm sales a year across their sheep and Angus cattle breeding operations, including the annual in-calf sale in early May. In 2020, this date fell within NZ's Level 3 Covid lockdown, during which no crowds or gatherings were permitted, making an outcry auction impossible.

With feed supplies tight and meat processing capacity limited, deferring the sale really wasn't an option either, meaning the only way forward was to hold it online. After looking at the various options available, the Meadowslea team decided to design their own from the ground up.

After running helmsman sales for many years for ram sales and in-lamb ewe sales previously, David and son George Giddings could see how an online helmsman sale would work very well for stud stock. They were able to provide a web-designing friend with a specific brief, and a week or so later Yourbid came into being. The sale was very strong, with spirited bidding from around New Zealand, despite no buyers being in attendance at all.

As well as that first female sale, Meadowslea has run 2 bull sales, an online semen sale, and 3 ram sales on Yourbid. Yourbid has been used very successfully for studstock sales in Scotland, and the Giddings family have received enquiry from breeders keen to use it from around New Zealand as well as in Australia, France, the US and as far afield as Romania. 3 other ram breeding operations have used it in New Zealand this summer, with a number of bull sales confirmed for the upcoming season and many more interested in switching to it over the next few years.

The family have also sold a house in Wanaka on the platform in the last couple of weeks, and can see a real opportunity to apply Yourbid in both the residential and rural property markets. 240Ha right next door to Meadowslea came on the market late in 2020, offered as a deadline treaty. They found that system secretive and bewildering, so when the time came to market a property to fund their successful purchase they were determined to make it more transparent and open for the buyers and decided to use their own Yourbid system, with a few minor tweaks to make it suitable for a single-lot sale. The sale was open for over month, allowing the market to set the final sale price nearly \$200,000 above the starting price.

## Online helmsman-style auction

Yourbid works as a Helmsman-style auction - meaning all lots are offered for sale simultaneously.

Other online livestock sales platforms in New Zealand use the traditional sequential auction model, whereby each lot is sold one at a time, one after the other. Yourbid uses the "Helmsman" style of auction. This means that all the lots on the sale are open for bidding at the same time, which is helpful for both buyers and sellers, particularly when conducted online. Bidding is also kept open over a period of several days, rather than the minute or so per lot of a conventional auction.

A key difference of this platform compared to any other the developers have seen is the bidding screen which shows the current prices of all lots simultaneously. Reserve prices are shown in red for a start, this changes to blue once the first bid is received, and the buyer number of the current leading bidder is displayed. New bids are highlighted in orange for a minute. Buyers who are logged in on their own device see the lots they hold highlighted in green. This gives an instant overview of the auction so anyone can see on which lots the activity and interest is, making it easy to establish their relative market values.

All online models have some level of time delay between when events happen on-site and when they are seen by remote buyers. For a traditional sequential auction a delay of 15-20 seconds can be very significant, when each animal might only be in the ring for 90 seconds or so. By keeping the entire auction open for a longer period of time this problem is mitigated significantly. It also means sales will not be affected significantly by any temporary technological glitches.

## Giving buyers time

Selecting seedstock is a major decision for sheep and beef farmers, and one which will have ramifications on their operations for years to come. People need time to gather and process information to make decisions. This is even more important when buying remotely, when information gathering is more difficult and takes time – meaning remote buyers

are significantly disadvantaged at an online sequential auction. The Yourbid system gives buyers this extra time, and by integrating the bidding on the website alongside the online catalogue, videos of each lot and a live commentary, this information is readily available to buyers. Rather than turning up on a given day and viewing all the animals in that tight time-frame, buyers can go through the catalogue, view the videos, makes selections, and bid at their leisure from home over the period of several days the sale is open.

### **Bidding order of preference**

Another advantage of a Helmsman-style auction is that it allows buyers to bid on stock in the order of their preference, rather than the catalogue order. For instance, as a buyer you might be interested in lot 8 and lot 12. At a traditional auction, lot 8 comes into the ring and isn't selling for too much, however lot 12 is your first preference so you decide to wait for that animal to come into the ring. Lot 12 comes in, sells for too much money, and you can't go back and bid on lot 8 because that animal is sold. Under the Helmsman system buyers can chop and change throughout the bidding. Meadowslea have analysed the bidding data for the sales they have run already, and it is obvious that a lot of buyers will bid on a certain lot to a particular level, then change to another lot, then perhaps go back to the first, or move onto a third animal they like. Some buyers bid on as many as 8 different animals to get the one they wanted – in a conventional auction they would have missed out completely or ended up with one that wasn't in their top-10 at all. By running the auction over a longer period, those who missed out on their first choice were able to go back through the videos and catalogue (or back through the pens for those who were actually onsite) and pick another animal they were satisfied with.

### **Integrating on-farm and online bidding**

Integration of on-farm and on-line bids is crucial to the success of a platform like this. This system works by having large TVs on-farm displaying the bidding screen. Buyers on-site can bid through their smart phones, and those bids are displayed in real time. Some buyers will still prefer to attend on-farm and bid using pieces of paper as per a traditional Helmsman sale – they write their buyer number, their lot number, and the bid price on a piece of paper and hand it in – they are able to enter this directly into the online system so it shows up on-screen in real-time as well.

### **Engaging with potential buyers**

By providing a live-chat on the platform, potential buyers are able to ask questions, request another closer view or more information about a particular lot, and even send through jokes and one-liners. Online videos and the livestreamed commentary are produced through Facebook Live. All this makes for a much more engaging and entertaining environment for the buyers, compared to what many feel are the sterile and austere atmospheres of some of the other established online platforms.

Yourbid invite enquiry from breeders, agents and commercial farmers interested in using the platform, and envisage it becoming an independent platform able to be used by all industry players.

**Comments:** Recognised as one of NZ's most influential and long-lasting senior sires, he is going strong 12 years of age. Traditional NZ Angus hill country type with proven industry-leading fertility. He has sired over 400 outstanding progeny which are always highly sought after, with sons and grandsons selling at top prices for studs across the country. His daughters are the top breeding females in our herd, and prove exceptionally fertile and productive in our hill country, resulting in him now being a breed trait leader for short days to calving at -9.4 days. He has a major influence in this sale with daughters and grand-daughters featuring strongly throughout the catalogue, and was once again used to settle adult cows this season.

**Comments:** F540 continues to have the biggest impact on our herd of any bull we have ever bred and was again mated a full complement of cows at 11 years old. Deep, thick, easy-doing sire with exceptional production figures for hill country. He excels in almost every maternal and fertility trait measurable, and is a trait leader for short gestation, milk, and short days-to-calving at -8.4 days. His daughters are outstanding in the herd weaning thumping calves while maintaining their condition all year round, a real testament to his rib and rump fats which rank in the top 2% of the breed. He features strongly in the catalogue with many daughters and grand-daughters on offer as well as being a first-line mating sire yet again.

**Comments:** The top Goldwyn bull of his year and purchased for \$13,000. A son of the widely-used Te Mania Infinity, he is passing on good fertility traits with strong scrotal size, positive fats, low birthweight and very good IMF figures. His daughters are very fertile resulting in him becoming a trait leader for short days-to-calving. He has several good daughters on offer and was also used to follow-up P565.

**Comments:** There is no doubt why we named this fellow Meat Machine and he is fast becoming an all-time favourite sire. We now have over 150 progeny and he is having a huge impact in the herd. He leaves terrific thickness and depth with great hindquarters, and that easy-doing ability we value so strongly shows in his exceptional rib and rump fats, which are almost off the scale. He is a trait leader for calving ease at +10.7 and has low birthweight and short days-to-calving in an early-maturing, moderate frame. We believe he is the true Angus hill-country type and this is reflected in him being ranked in the top 5% of the breed for self-replacing index. He features as both a sire and mating sire in the catalogue. There is no doubt why we named this fellow Meat Machine and he is fast becoming an all-time favourite sire.

SELF REPLACING INDEX	+\$147	HEIFER / DAIRY TERMINAL INDEX	+\$102
----------------------	--------	-------------------------------	--------

**Comments:** This son of Meat Machine is out of a top Turihaua Crump heifer so is bred to be thick as a brick. He has maternal and fertility traits that are exceptional, with calving ease, low birthweight, and scrotal size in the top 20% for the breed while his short days-to-calving figure is in the top 1%. Meanwhile, his rib and rump fat EBVs are off the scale. His progeny have scanned so well his EMA has jumped from +2 to +6.9 and this has pushed his self-replacing index to \$147 - recognising the importance of these strong maternal and fertility traits to a commercial beef operation. We believe any high country farmer - and his bank manager - would love to have a herd of cows like this! He features as a sire and mating sire in this catalogue, and got G914's cows as well in the second cycle.

----------------------	-------	-------------------------------	-------

**Comments:** Retained in the stud in 2016, he is a Turihaua Crump son, out of a cow by our old herd sire Meadowslea 70 (who is the grandsire of F540). A deep, thick, easy-doing bull with very strong rib and rump fat EBVs. His first crop of sons in the 2019 bull sale sold very strongly to \$17,000 and he has some outstanding prospects for our upcoming 2021 bull sale, including Q524 who was used first-line over adult cows. He has some good daughters in this sale and they all exhibit the same thickness and top hindquarter, and have very strong coats ideal for the harsher climate.

----------------------	-------	-------------------------------	-------

**Comments:** Purchased in 2016, he was selected for his volume and capacity with an outstanding hindquarter, and his progeny strongly reflect this. In 2019 we sold the first of his sons as 2-year-olds and they were a real feature of the offering including the top equal price of \$22000. He is leaving plenty of growth in his progeny with strong rib and rump fats and good IMF. He has some good daughters in this sale and was used as a first-line mating sire as well as to follow-up the AI later on.

**Comments:** We retained this bull in the stud in 2017. His sire is Meadowslea J514, an F540 son sold for stud to Earnsclough Station for \$17,000 in 2015. L226 is out of a top young Turihaua Crump heifer who also produced M452, sold in 2018 bull sale to Peak Hill Station at \$17,000 with a share retained at Meadowslea. L226 has strong fertility and maternal traits with calving ease, short gestation, low birth weight and good scrotal size. His short days to calving figure is in the top 10% of the breed. His first crop of sons were the outstanding bloodline in last year's bull sale and we retained P700 as a stud sire. He features as a sire of the heifers as well as a mating sire.

----------------------	--------	-------------------------------	-------

**Comments:** Purchased at the Beef Expo in 2017, this bull had impressed many at the bull evaluation unit with his structural soundness, good feet and strong hind-quarter. He is out of a top moderate-framed Turihaua cow from their embryo transplant programme, who also bred stud bulls sold in the 2018 Turihaua bull sale to Oregon Angus and Alpine Angus. This is the second year we have his 2-year-old progeny offered for sale and he has consistently bred thickness and very good hindquarters. His figures of moderate birthweight, good growth, and lower mature cow weight give a self-replacing index in the top 10% of the breed. He has some impressive daughters in this sale and was used as an outcross mating sire to follow up the AI programme.

**Comments:** This top son of the Rangatira 13-38 (the \$100,000 bull) was sold at lot 10 in the 2018 sale to Peak Hill Station for \$17,000. He has a very good pedigree, being out of a top Crump cow who is also the mother of the stud sire L226. We retained a share in this bull and his first crop of R2yr daughters are in this sale. He is very powerful with tremendous depth and thickness, and real volume and capacity with very strong growth.

**Comments:** Retained in the stud in 2018, M564 is a son of F540 and out of a great cow by Glanworth 16 who is lot 93 in this catalogue. We selected him to use as a yearling after he had scanned with the biggest EMA ever recorded in the stud, and he is passing this trait on to all his progeny. He has wonderful fertility and maternal traits with calving ease and moderate birth weight, while his scrotal size, milk, and days-to-calving are all in the top 10% of the breed. A moderate-framed, easy-doing type reflected in his rib and rump figures which feature in the top 1% of the breed. With good IMF as well he has a terrific spread of figures for hill-country. The first of his R2yr heifers are on offer and some outstanding sons of his were used as yearling mating sires.

**Comments:** This bull was purchased at the Woodbank sale in 2018 for the top price of \$32,000. He was selected for his exceptional depth and thickness and easy doing ability. He has tremendous spring of rib, great depth of flank and powerful hindquarter. We rate this bull very highly and there are some feature lots in this sale mated to him. The first of his progeny were recently weaned and look outstanding.

**Comments:** We retained this sire in 2019 and rate him as possibly the best Turihaia Crump son ever! He is out of a top-performing Glanworth 16 cow who is lot 89 in this sale. She has also bred our top price bull in 2018 - M429, sold to Red Oak Stud for \$18,000, as well as other top sons sold at \$11,500 and \$9,500. N166 was used in the stud as a yearling and we have some very exciting sons that will be stand-outs in our June bull sale catalogue. We really rate this bull and expect he will have a major influence in the stud. He has R2yr daughters in the sale and features as a first-line mating sire, and followed up Turiroa 14830 as well.

**Comments:** Retained in 2018, he is a son of K904 who we used as a yearling and then sold to Robin Jameson for \$9,500. His dam was the great old cow E350, who was the top annual draft cow in the 2019 sale, and sold to Pikoburn Angus at \$5000. N119 is a moderate-framed, deep-bodied bull with a wonderful hind-quarter. He has strong fertility traits with short days to calving, while his scrotal size, rib fat and rump fats rank in the top in the top 5% of the breed. He scanned with very good IMF% to boot. He has 1 daughter on offer and was used a first line mating sire as well as follow-up to both Panther and P700.

**Comments:** P565 was our top keeper bull in 2020. He was a standout as a calf and with his exceptional depth and thickness he was our first choice to mate over stud heifers as a yearling. He has a top pedigree, being a son of the well-known Taimate Lazarus, and out of one of our top 10-year-old cows, G943, who is lot 98 in this sale. Good fertility figures with strong scrotal and short days to calving combine with good muscle and IMF to give good index figures. He was used to mate stud heifers in the first cycle and then completed 2 cycles with stud cows.

**Comments:** We retained P700 in 2020 after using him over stud heifers as a yearling. He was one of many outstanding sons of L226 and we selected him for his strong fertility traits and compact moderate frame packed full of meat. He excels in all the traits we value in the hill country, with calving ease and low birth weight followed by very strong growth, exceptional scrotal size, short days to calving, low mature cow weight and both rib and rump fats all in the top 10% for the breed. He was used to mate heifers in the first cycle and then a mob of stud cows.

**Comments:** We are very excited to introduce our new sire Turiroa Panther - named for his superbly balanced walking ability. We rate Panther as one best bulls we have ever had at Meadowslea an eagerly await his progeny. He is out of a top cow family at Turiroa Stud from their embryo transplant programme. His dam is sired by our own Turiroa Crump through AI and is a full sister to Turiroa Maverick, who bred so well at Rangatira Stud and featured strongly in their recent dispersal sale. Panther is deep, thick and square with an exceptional hindquarter in a moderate frame. He has a good balance of figures for hill country giving him a self-replacing index in the top 30% for the breed. He was mated to featured lots throughout the sale. Used first-line and then to follow-up the Q524 and Crump mobs

**Comments:** Purchased from the 2020 Turihaua bull sale. This bull impressed us with his overall balance and quality. We were keen to find a son of Turihaua Rhino who displays such great depth, thickness, and strong hindquarter. P186 has developed tremendously since we have had him. We used him to mate his own mob of adult cows and to follow-up N166.

-----------------------------	---------------	--------------------------------------	---------------

**Comments:** We purchased this Taimate Lazarus son as a yearling for \$9,000 to use in our heifer mating programme. We selected him for his depth of body, strong hind-quarter and clean shoulders and we were so impressed with him that he was also used as a follow-up bull in the adult cow mating. His figures fit well with our emphasis on maternal and fertility traits, and he ranks in the top 10% of the breed for calving ease, low birth weight, rib fat, and rump fat. His nice moderate mature cow weight and short days to calving give him an impressive self-replacing index in the top 10% for the breed. He was mated to a good selection of R2yr heifers in this catalogue and was used as a followup to the whole mob at the end.

**2020 MATINGS**

**Comments:** A standout bull at mating time, we mated a mob of adult cows to him. Combines all the best bloodlines at Meadowslea a Turihaua Crump grandson and out of a cow by Meat Machine. Great-grand-dam H107 is an F540 daughter and one of the highest performing cows in the herd, who produced lot 2 in the 2019 sale, sold to Brian Keenan for \$17,500. Q524 has performed very well himself; 5th heaviest at 400 days, he mated a mob of adult cows and came through heaviest out of the used mob at 600 days. Terrific power and volume about this bull. Thick, deep, and square with exceptional easy-doing traits, resulting in rib and rump fats in the top 1% of the breed, along with good short days to calving. He must rate as one of the top prospects for the winter Bull Sale.

**Comments:** The outstanding Meat Machine G914 son of the year who we rated as one of the best that bloodline has produced. He was mated a mob of R2yr heifers, and has ideal figures for that job: we liked him so much we gave him a full two cycles. Very good calving ease and low birthweight, with fats in the top 1-2% of the breed, very short days to calving and a very good self-replacing index. His mother is an F540 grand-daughter, and her first calf as a 2-year heifer was N157, another outstanding bull we used who was sold to Roger Pearce for \$15,500 and was bred very similarly. Shows all the attributes you would expect of this cross. Powerful head and bone, deep, thick, square, and very easy-doing.

**Comments:** By the F540 son M564, out of a K703 daughter, so you would expect some real muscle which certainly shows up in his carcass data with a top EMA. Selected to mate a mob of yearling heifers. By the F540 son M564, out of a K703 daughter, so you would expect some real muscle which certainly shows up in his carcass data with a top EMA. Excels in almost all the fertility and maternal traits measurable as well. Good calving ease, low birthweight, scrotal size in the top 5% of the breed and short days to calving in the top 10%, while his rib and rump figures are really exceptional. This all combines to give a self-replacing index in the top 10% of the breed. Easy doing with terrific width across the loin and a great backend.

**Comments:** This Rangatira 16209 son has been the standout yearling of the year and we are very keen to retain him in the stud. He offers a good outcross to our major bloodlines. He has good calving ease, low birth weight followed by good growth and moderate mature cow weight. His scrotal measured 2nd biggest out of all 190 yearlings and his rib and rump fats are in the top 5% of the breed. We love his strength of head, foot and bone, his volume and capacity, and natural do-ability. He was mated over heifers together with Q223.

**Comments:** Another very good son of Rangatira 209 who was used over stud heifers together with Q178. Very similar in type with the same strength of bone and head that we like so much from this bloodline. Q223 has a powerful hind-quarter with plenty of growth and fats in the top 20% for the breed. Look out for these Rangatira 209 sons in the upcoming winter bull sale - they will be a real feature!

SELF REPLACING INDEX	<b>+\$106</b>	HEIFER / DAIRY TERMINAL INDEX	<b>+\$100</b>
----------------------	---------------	-------------------------------	---------------

**Comments:** The outstanding performer of this year's crop of bulls. 6th heaviest at weaning, he scanned with the best EMA and the top IMF and rib fat. His EBVs shows scrotal size in the top 10%, fats in the top 2%, as well as low birth-weight and strong IMF. He is a different bloodline, so was used as a follow-up bull over all the heifers. Real meat, depth, thickness and easy-fleshing. Performance and type combined - this will be a real stud prospect for the winter bull sale.

----------------------	---------------	-------------------------------	--------------

**Comments:** A very exciting prospect here and used to follow up heifers in the second cycle. Q421 combines our easiest doing bloodlines with Meat Machine and K904 in his pedigree, ensuring rib and rump fats at the very top of the breed. This bull is really coming on and will be another standout in the June sale. Calving ease with low birth weight, good scrotal size and short days to calving, all in a moderate frame with an exceptional hind-quarter.

**Comments:** Sire M429 was a son of the \$100,000 Rangatira 13-38, and was sold to Red Oak Stud for \$18,000. We used this bull to mate yearling heifers, alongside Q225. Good calving ease, low birth weight, exceptional scrotal size in the top 5% for the breed as are his rib and rump fat levels. These strong maternal and fertility traits are reflected in his strong self-replacing index. A bit more scale and frame with nice clean shoulders.

62%	54%	63%	62%	68%	66%	63%	62%	

**Comments:** A classic Turihaua Crump daughter. Deep, thick, with a heavy coat and a straight top-line. Plenty of length and thickness. A top heifer to lead off this sale, she is in the top 15% of the breed for the crucial days to calving trait, and is out of a top breeding cow who has 3 daughters still in the herd. Mated to the M564 sons we used that should give her some real data.

63%	55%	63%	63%	68%	66%	64%	63%	

**Comments:** Another Crump heifer as thick, square, and deep as the last. Great top-line, nice balance, and very well put together. Her days to calving figure is in the top 10% of the breed, and fats are in the top 20%. Dam G828 appears at lot 96 in this sale, and bred stud bull K890 sold to Peter Heddell, with two daughters retained. Mated to the exciting new Timperlea Quain 763 yearling.

59%	47%	59%	60%	66%	64%	60%	60%	

**Comments:** Leading in this second pen, this heifer has terrific length, depth, and thickness with a top backend and the easy-doing quality these Meat Machine cattle are known for. Out of a good young Crump heifer. An impressive package of figures calving ease in the top 15% or so, days to calving in the top 5% of the breed, rib and rump fats well inside the top 1% of the breed, and a good medium mature cow weight combine for a top index value. Should be a good mate for P565, our Lazarus keeper from 2020.

58%	41%	58%	59%	65%	63%	58%	58%	

**Comments:** A big, strong, deep-bodied heifer with a terrific top-line, width, and depth. A top heifer. Her pedigree features Crump, Meat Machine and F540 so she was always going to be impressive! P825, sold for stud to Okaka Angus last year, is her full brother. Days to calving is in the top 6%, fats are in the top 5%, scrotal size and self-replacing index the top 25%, which all indicate exceptional fertility. Mated to Timperlea Quain.

**Comments:** A classic upstanding, well-balanced F540 daughter. Deep-bodied with a little more frame. Out of a nice Glanworth 16 cow who produced lot 5 in the 2019 sale, sold to Matt McKenzie for \$17,000. Second best raw EMA, 6th best IMF, her rib and rump fat EBVs are in the top 15% along with very good calving ease, low birthweight, milk and days to calving - the full gamut of fertility and maternal traits. Also in calf to the Timperlea outcross bull.

**Comments:** Great skin, coat and some real balance about this free moving heifer. Easy-doing quality and some real strength. By our outstanding N166, out of a good cow who produced a stud bull that was later sold to Hawkdun Station. Fats are in the top 5% of the breed and days to calving the top 10%. Mated to the young Timperlea sire.

# The Meadowslea hill-country type

Visual appraisal is still very important for selecting cattle to perform in hill - country

**MASCULINE TRAITS** - A strong head and jaw and thick neck indicate high levels of libido, testosterone and reproduction efficiency

**NECK LENGTH** - A thicker necked animal matures and reaches puberty earlier and has more libido

A longer neck indicates a higher maintenance animal that is slower to reach puberty and re-breed

**HEART GIRTH** - Large heart girth is an indicator of vigor and easy keeping ability

Small heart girth animals are more susceptible to stress, are higher maintenance and do not perform well on tussock

**RIB FAT** - Strong rib fat covers are the essential energy store for adverse conditions.

They indicate easy-doing and finishing ability and are directly related to increased fertility in both heifers and cows.

**STRUCTURAL SOUNDNESS, FEET AND BONE** - High country cattle cover large distances over rugged terrain so a strong skeleton is essential

**HIDE** - a good thick skin and coat is essential in the cold harsh environment

**FLANK** - Deep flanked animals are easier keeping, have more meat in the rump and have more maternal and reproductive efficiency

Higher flanked animals tend to be flighty, are higher maintenance and take longer to finish on grass

**SCROTAL SIZE** - Larger scrotal size at 12 months indicates daughters will reach puberty earlier, be more fertile, and re-breed early every year.

## BRED FOR THE HILL COUNTRY

The development of the Meadowslea hill - country type has been the result of 25 years of selecting animals that perform the best in our hill country environment. Cows that can winter easily on the hill without supplements, stay in good order, calve easily and get back in calf early every year for 10 years has been the focus of our breeding programme. By putting pressure on cows to winter on native hill blocks it quickly became apparent that some animals could manage well in this environment and would easily get back in calf the next year, while those that struggled would be too light going to the bull, and either calve later each year, or come through dry.

Those that were dry or were not holding their condition well enough were removed from the stud herd, while the "easy-doing" types thrived and passed their genetics on to the next generation. It was clear that it was the cows with good fat covers going in to the winter that were consistently performing the best in our environment.

Ultrasound scanning is performed on all yearling bulls in early spring, and on the heifers in the autumn. For us, the most important data is the rib and rump fat cover measurement - we have found these strongly correlate with those easy doing characteristics, and we now put a lot of emphasis on this when selecting bulls to use and heifers to retain. This is reflected in Meadowslea having some of the highest fat EBVs on the Trans Tasman Angus Cattle Evaluation.

These great positive fat EBVs in the Meadowslea herd have come about simply by selecting animals that suit the hill country environment.

Carcase Rib Fat (mm)

Graph showing improvement in fat EBVs at Meadowslea while running the herd on hill country, compared with Australasian average. From TransTasman Angus Cattle evaluation, April 2021.

■ Meadowslea herd  
● Australasian herd average

The average rib fat EBV of the females in this catalogue ranks in the top 10% for the breed in Australasia.

**Comments:** One of the last Ratanui Lad progeny we have coming through. Solid, thick, and upstanding with good outlook and clean shoulders. Fats are in the top 5% along with good calving ease. Out of good old cow who produced M1004, sold to Piko Burn Angus for \$10,000. Mated to our own P565 Lazarus son.

**Comments:** Deep-bodied, well-balanced, quality heifer. Lovely top-line and strong loin. Sire N465 was used heavily as a yearling before being sold to Makarora River Ranch, and has left some impressive performance. Equal-top IMF in the mob, with fats in the top 5%, scrotal size in the top 25%, as well as low birth weight and calving ease. Mated to P700.

57%	39%	58%	58%	64%	62%	57%	57%	

**Comments:** We start the R3yr age-group with a top K703 heifer who exemplifies everything we strive for at Meadowslea. Thick, deep and square, very productive and feminine. She has some impressive data with good calving ease, scrotal size in the top 20%, days to calving in the top 5%, fats in the top 1% and a top self-replacing index. She scanned second-best for rib fat. Her mother is a daughter of the high-performance J514, who is breeding exceptionally well at Earnsclough Angus. She is in-calf to the new Turoia Panther, a bull we rate really highly, so this should be a terrific cross.

**Comments:** A bit more scale and capacity about this heifer, but with great depth of body and a very good top-line. Top index as a result of her moderate mature weight EBV. Very strong days to calving, fats in the top 10% of the breed and the best actual EMA in the group also contribute. Mated to the new Turihaua Rhinestone bull.

**Comments:** An outstanding Turihaua Loyalty heifer starts this run of bigger-framed cattle. A good top-line, plenty of volume and capacity with terrific depth. Out of a top cow who bred a bull we used in the stud, grand-dam was a top breeder as well. Good calving ease maternal trait, low birthweight, medium mature cow weight and a good index. Mated to the Q524 yearling followed by Rangatira 209.

**Comments:** Another very good Loyalty, with a bit more frame and stretch. Great skin on her and plenty of capacity. Top breeding pedigree - grandsire D227 is the sire of F540, and dam produced one stud bull retained, another sold to Mt Mable Angus, two other top sale bulls, and a heifer retained. Weaned the second-heaviest calf in this age-group. Scrotal size is in the top 15%, has good calving ease, low birthweight, and moderate mature cow weight EBV. A top mate for P700.

54%	34%	56%	55%	62%	60%	55%	54%	

**Comments:** A nice, thick, and moderate-framed heifer. Good volume and capacity, a very good mate to the top 2019 keeper bull N166. Scanned with the top IMF in the group, has fats in the top 5% of the breed, as well as good calving ease and short days to calving. Grand-dam bred a stud bull sold to Okaka Angus last year.

**Comments:** First-up in this age-group is this top F540 cow with a great pedigree going back to the well-known Turihaua Rex. N211 has all the fertility and maternal traits we expect from the F540 progeny, ranking in the top 20% for almost every trait measurable. She has exceptional short days to calving and fats in the top 1% for the breed. Clean shoulders, a good top-line, and great depth of body. A really good type of cow with a very exciting mate to N166.

64%	54%	64%	63%	68%	67%	63%	62%

**Comments:** Another top F540 cow to follow, this time out of a great old 11-year-old cow, who produced a stud bull L141 that was used as a yearling and sold to Linnburn Station. N313 has nice spread of figures and scanned very well with the 2nd best EMA and good marbling. The classic F540 type deep-bodied, easy-doing, moderate-framed with a nice feminine outlook. Very exciting prospect here. In-calf by AI to our top-priced bull in 2020, the \$35,500 P593.

**Comments:** A good-conditioned cow here by L252, who was a very good Meat Machine son sold to Reece Whitelock. As we would expect with this bloodline she has incredible fats that are off the scale! Great skin and easy-doing quality about her with length, depth, and a very strong hindquarter. She weaned a very good calf this year. Mated to the new Turihaua Rhinestone bull.

**Comments:** An exceptional old cow to start the run of the 10-year-olds. G922 is probably the best breeding cow in the herd. She is the dam of two top stud bulls; N166 retained in 2019, and M429 who was used as a yearling and then sold to Red Oak Stud for \$18,000. Her Dam A330 was also one of our greatest ever cows - she produced 2 stud bulls including 07 844 sold to Sudeley Stud, who was the sire of dam of Sudeley Viking, the bull sold in 2020 for \$60,000. G922 has also bred 2 other top sale bulls and is strong in all the maternal and fertility traits measurable with scrotal, short days to calving, rib fat and rump fat all in the top 10% for the breed. Her self-replacing index of \$134 places her in the top 10% of the breed. She is the first of the outstanding run of 10-year-old daughters of Glanworth 16 which are a real feature of this sale. Mated by AI to Woodbank 0717 followed by the AI follow-up

**Comments:** Another top Glanworth 16 daughter demonstrating the same tremendous depth and thickness and strong maternal traits we consistently see from this bloodline. G892 has bred 2 good sale bulls including a top son of Rangatira 13-38, N144 sold to Grays Hills for \$14500. She is thick, square, deep-bodied and easy-doing with rib and rump fats in the top 10% for the breed all in a moderate frame giving her a very good self-replacing index. A top cow and super AI mate to Taimate Lazarus.

**Comments:** Here is another top Glanworth 16 daughter. Tremendous barrel with that efficient moderate frame and exceptional hindquarter that Glanworth 16 consistently bred. G860 scanned exceptionally well with a strong EMA, the top rib and rump fats of her year, and the 3rd highest IMF. She has produced 3 good sale bulls and had 1 daughter retained. An exciting prospect, mated to our top Lazarus son P565, followed by Goldwyn 17.

71%	61%	67%	65%	71%	69%	65%	64%	

**Comments:** These Glanworth 16 daughters keep on coming, and this cow is the same mould once again. G943 is the mother of our top 2020 keeper bull P565, and she shows the same depth, thickness, barrel and exceptional hindquarter that made keeping P565 such an easy decision. Strong fertility traits with good scrotal size and short days to calving give her a good self-replacing index. With an exciting mate to F540 she really is a top pick.

74%	62%	70%	68%	73%	72%	68%	67%	

**Comments:** Another of our all-time favourite cows, G1000 is the dam of M564, our stud keeper bull in 2018, who still holds the record for the biggest EMA we have ever scanned. G1000 scanned exceptionally well herself with the biggest EMA of her year and this is reflected in her EBV at +7.1. She also has rib and rump fats in the top 5% of the breed and scanned with the second best IMF% of her year. She produced another stud bull sold to Red Oak and has 3 daughters retained in the herd, as well as a son that looks a top prospect for our June bull sale. A slightly bigger-framed cow but always in top condition. Terrific balance, very correct with a nice topline. Mated to L226 and his son Q157, followed by L256.

**Comments:** Another of these consistently impressive Glanworth 16 daughters to finish this pen. Deep, thick, tremendous barrel and hindquarter with real quality and true easy-doing attributes in a moderate frame. She is breeding well with 2 good sale bulls including K890, a stud bull sold to Glen R Angus in 2016, and 2 daughters retained. G928 has a great balance of figures with calving ease, short days to calving and strong rib and rump fats combining to give a self-replacing index in the top 15% of the breed. Really exciting mate to Turoira Panther followed by N119 and then P565.

**Comments:** We lead off this pen with another Glanworth 16 daughter. G895 has a bit more frame but those same easy-doing attributes with great balance and outlook. She has a strong pedigree, being out of the great old cow D056 who was sold our inaugural female sale sold to Linnburn Station for \$5400, and who shows up in many of our good pedigrees. These Glanworth 16 daughters have such consistently strong fertility traits and G895 has good scrotal size with short days to calving and both rib and rump in the top 5% of the breed, resulting in a self-replacing index in the top 20%. She has produced 4 good sale bulls including K924, used in the stud and sold to Greg Hand for \$9,000. Mated to L226 and Q157 followed by L256.

**Comments:** Tremendously thick and deep daughter of Drambuie to lead out this final pen of 10-year-old cows. This impressive cow has always been in terrific order and this shows in her rib and rump fats that are in the top 5% for the breed. Her other key fertility traits of short days to calving and scrotal size are also in the top 10% for the breed resulting in a good SRI. She has a great top-line, width, thickness and meaty hindquarter in a moderate frame. This cow has produced 2 good sale bulls including L240, used in the stud as a yearling and sold to Strathavon for \$11,500 where he has done very well. She has just weaned the heaviest calf of this year group. In-calf to N166.

**Comments:** An exceptionally easy-doing cow to finish on. Good balance and well put-together with the same depth, thickness, and moderate frame. She has calving ease, good strong fats, and just weaned a very good calf as reflected in her strong milk figure. She has produced 4 daughters retained in the herd and was mated to Turiroa Panther followed by N119 and then P565.

# PROUD TO BE LOCAL

## THE FEELING'S MUTUAL.

There are plenty of good reasons for being local right now. As a 100% NZ-owned mutual, we've always been proud to be local—and to act local. That's why you'll see us at events (when we can) all over the country supporting those who support us. Most of our team live and work in the same region as their clients, which makes it easy to come to the farm and share specialist insurance and risk advice. When we're not on farm with you, we're only a phone call away to chat through things over the phone. If that sounds like the kind of local insurer you'd like to deal with, ask around about us or better still, give us a call on 0800 366 466.

*We're here for the good of the country.*

Advice & Insurance

# Instant livestock cover

FMG Instant Livestock Cover provides short term, non-renewing cover for your specified animal(s) for death or infertility as a result of accident, disease or illness.

## Your animal's age and value

Any animals covered under this policy must be certified 'fit for purpose', in sound health and to qualify for automatic underwriting, be purchased for less than \$25,000 each.

Animal: Bull, ram and cow/heifer  
Age Limit: Between 6 months and 5 years

Animal: Stag  
Age Limit: Between 3 months and 12 years

## During the period of insurance, the specified animal is covered for

- Theft.
- Death caused by an accident, disease or illness.
- Bulls, rams, stags and machos: Infertility—intentional slaughter because the animal becomes infertile through accident, disease

or illness, and provided that the animal has been infertile for more than 90 days, or the vet has certified that the animal is permanently infertile. Please note this cover is not available for cows/heifers.

## You are automatically covered for

- Up to \$500 for the reasonable vet fees you incur for treatment of injury or treatment administered to prevent the death of your specified animal, whether or not death occurred.
- Up to \$2,500 for the reasonable cost you incur to remove the carcass of the specified animal following a fire.

## You also have the optional cover for

Your specified stags to be covered for accidental death as a direct result of hard antler or velvet removal.

## Period of cover options

- 30 days.
- Up to 3 months.
- Between 3-6 months.
- Between 6-12 months.

You can also insure your livestock on an ongoing basis under our separate Livestock policy.

## What we will pay

Fair market value of your specified animal, less any amount you receive for the sale of the carcass, up to the amount shown on the Insurance certificate.

## Instant livestock cover\*

Please fill in this form as soon as you have purchased your new animal(s).

Agent name and company: \_\_\_\_\_ Telephone: \_\_\_\_\_

### \*Conditions of acceptance

Please refer to the attached tear-off sheet for applicable age limits and maximum values. If your animal is outside these ages, contact FMG on 0800 366 466 for further options.

Acceptance of cover is conditional on this fully completed form being received by FMG within 10 days of purchase and standard FMG underwriting criteria being met. For full details of the cover, you should refer to our Livestock policy

document which is available on our website [www.fmg.co.nz](http://www.fmg.co.nz) or by calling 0800 366 466.

If you would like a renewing cover rather than a short term lapsing policy or would like a death only policy, please contact FMG on 0800 366 466 for a quote. Please note, renewing cover can only be offered to existing FMG clients. This is an optional benefit that needs to be purchased in addition to your standard insurance cover.

Please complete this form and return within 10 days by fax **03 358 1820**, email **businesssupport@fmg.co.nz**, or post **FMG, PO Box 2141, Christchurch 8140, Attn: Business Support.**

### Disclaimer

Please note this is only a summary of the product and is subject to our specific product documentation. For full details, you should refer to the policy document. You can get these documents, and any other information you need, from your local FMG representative, by calling us on 0800 366 466 or by visiting our website [www.fmg.co.nz](http://www.fmg.co.nz)
