

MEADOWSLEA ANGUS 2ND ANNUAL FEMALE PRODUCTION SALE

**ON FARM FAIRLIE
MAY 2ND 2018 – 12 NOON**

**The top AD cow D72 (lot 81) out on the tussock with her calf back in 2012.
Behind her is D81 (lot92)**

OFFERING:

40 R2yr Stud Angus Heifers
20 R3yr Stud Angus Heifers
20 R4yr Stud Angus Cows

20 Annual Draft Stud Angus Cows
**60 R2yr Meadowslea Bred
Commercial Heifers**

SCIENCE CATCHES UP WITH OLD FASHIONED STOCKMANSHIP!

Scientists working in Epigenetics in human medicine have made discoveries that support the breeding programme at Meadowslea. Recent research has shown that an unborn foetus can activate parts of its DNA in response to the challenges of the environment and that these changes can then be passed on to the next generation.

Meadowslea Stud cows winter on unimproved native country without any supplements. This tough challenging environment for the pregnant cow can alter gene expression in the unborn calf. This sets the calf up to survive and thrive for its lifetime and produce offspring in a similar harsh environment that will do the same.

“Epigenetics goes a long way to explain why our own genetics consistently out perform any so-called “high performance” genetics that have been introduced at Meadowslea. It also helps explain why cattle born at sea level are unlikely do any good in the harder hill country “

- David Giddings

GOOD FAT COVER AND EASY-DOING ABILITY

Meadowslea stud 18mth in calf heifers showing good fat coverings and ready to winter on the hill.

A cow's condition and her ability to lay down fat in times of surplus is a very important trait. Any Angus cow should do this under easy down-country conditions, but to be able to do this on native hill country blocks is a very desirable trait. This rib and rump fat is the cheapest and most efficient energy store on the farm and will determine the fertility of the herd after a hard winter or difficult spring conditions to get cows back in calf.

Meadowslea cows and calves come down off the hill for weaning.

All Meadowslea yearling heifers are mated and any dries culled. After calving these heifers are run in mating mobs together with mixed age cows and expected to get back in calf early, rear a good calf off the tussock, and stay in good order. A tough ask for a 2yr heifer and only the ones that prove they can handle the hill will be retained.

A cow going into winter with good fat coverings carries an energy store on her back equivalent to approximately 2 bales of baleage.

The Meadowslea herd has natural Rib and Rump fat levels amongst the highest in the breed in Australasia – acknowledged as a key trait for fertility in the harsh environment.

SECOND ANNUAL FEMALE PRODUCTION SALE

ON FARM

Meadowslea, State Highway 8, 5km west of Fairlie

10am

Cattle penned ready for inspection - continuous hot morning tea

12 NOON

Sale begins followed by BBQ and Refreshments

CONDITIONS

- 1 The New Zealand Stock & Station Agent's Association Conditions of Sale and, to the extent deemed relevant by PGG Wrightson Limited (PGW), PGW's Terms of Sale apply to this sale. When proceeds are credited or a purchase is debited to a PGW monthly credit account, then PGW's Monthly Account Terms of Trade (as amended from time to time) apply to the extent deemed relevant by PGW. These terms can be inspected at the registration desk and on the wall in the auction room. The current versions of PGW's Terms of Sale and Monthly Account Terms of Trade are also available online at: www.pggwrightson.co.nz/Our-Company/Terms-and-Conditions or in hardcopy on request.
- 2 All intending purchasers must register at the sales office prior to the sale.
- 3 PGW will pay a purchasing rebate of the purchase price excluding GST, plus GST of 6% on stud cattle sold with a stud transfer, and 3% on non-stud transferred cattle, to livestock companies & recognised independent livestock agents with a PGW account who have introduced buyers to PGW before the sale and/or accompanied buyers to the sale.
- 4 All stud cattle will enter the ring for sale in groups of 4 and purchasers will have the right to the pick of the pen or the lot. The balance of the pen if any will then be re-offered.
- 5 Stud cattle purchased for transfer must be nominated at the fall of the hammer. The minimum Transfer price will be \$2500. Any lot purchased for transfer at less than this price will be charged out at the transfer price of \$2500
- 6 Each Lot becomes the responsibility of the purchaser at the fall of the hammer.
- 7 Transit and Livestock insurance can be arranged by the auctioneers
- 8 The Sale will be conducted purchase price plus GST

FOREWORD

Meadowslea Angus Stud was established in 1985 with the purchase of 6 capital stock heifers from the well-known Turihaua stud north of Gisborne. We have steadily expanded ever since to meet strong demand for bulls from the hill country market we target – our belief is that an animal must first and foremost be suitable for the environment it is run in.

With the recent lease of a neighbouring property we have taken the opportunity to increase the stud cow numbers further and this year mated a total of 560 stud females. The demand for our bulls has steadily increased with 170 bulls sold at auction in 2017. Last year, with a confident beef industry and the lease block fully stocked, we held our very successful first annual female auction. We now plan to stabilise at 400 stud cows and sell a similar number and age-group breakdown every year going forward. The longevity, fertility, constitution and structural soundness of our female cattle are the key that allows us to present the numbers of females in this catalogue. With very few dry cows and minimal losses to breakdowns or poor constitution it proves our cows are the right type to handle their environment. This means fewer replacements are required and more quality surplus females are available to sell.

At Meadowslea all yearling heifers are mated. The decision around which to sell and keep was made in February with relatively limited information on the young female cattle since we do not yet know how they will perform in the herd. No doubt many of the young females we are offering will turn out to perform as well or better than some we are keeping ourselves! In recent years as we have expanded the stud cows and with a view to a potential female sale we have monitored the progeny of the potential sale cows. Many animals bred from this group are performing at the very highest level with the proportion of their bull calves making the top sale group, and heifer calves going on to themselves be retained, being very similar to that of the balance of the herd.

We offer these females for sale with complete confidence, and in particular the annual draft cows are true capital stock having done up to 10 years on the hill, surviving droughts and snowstorms without ever being fed supplements. We have sold over \$220,000 worth of bulls from this group of 20 cows over their lifetime! This is truly proven performance.

As you read this catalogue it will become clear that the animals that perform the best in our environment are of a similar type – strong rib fat levels drives our programme forward for two reasons. It is strongly linked to fertility, early puberty and the ability to calve early and rebreed early over a lifetime. Secondly, it is the energy store the females use to get through the feed shortages and extended stress periods all too common in this harsh environment

It is significant that the average rib fat EBV of the animals on offer is +1.3 putting them in the top 10% for the breed in Australasia.

The other important maternal traits of calving ease, days to calving, scrotal, and milk are generally all at very high levels throughout the catalogue.

High growth females do not work well in our hill-country environment and you will see few in the catalogue, as over time they have failed to perform and so have dropped out of the herd.

All cattle offered have been scanned in calf by Aorangi Vets limited. All dry cows are culled at Meadowslea so to make it to this sale a cow must have calved every year. We individually mate all stud cows, with one bull per mob initially and change bulls over after approx. 30 days... The 165 yearling Stud heifers were mated in 5 mobs of around 35 selected on pedigree. Each mob had 2 yearling bulls of the same bloodline which resulted in 97% conception rate. We do DNA parentage for all stud calves.

This is the second year we have we have offered our stud females to the industry and almost all sires used are unique in the world to the Meadowslea herd. For stud breeders this is an opportunity to access outcross bloodlines proven to be highly productive in the hill country, and for commercial clients the option to gain access to genetics that would not be available to purchase as bulls for 3 more years.

From our perspective, the more of these bloodlines that are available in the industry here in NZ, the better the chances of us being able to source sires that fit our programme; a task that is becoming increasingly difficult

with the NZ Angus genepool now so heavily influenced by genetics sourced from USA and Australia. Feedlots drive most of the selection criteria for these imported genetics making them in our experience totally unsuitable for our NZ grass-fed sustainable hill country production.

COMMERCIAL HEIFERS ON OFFER

We purchased weaner heifer calves last year from four Mackenzie basin Stations. Grays Hills, Braemar, Guide Hill and Manahune have all been long term clients since our inaugural bull sale over 20 years ago and have always bought very good Meadowslea bulls. All four properties retain only enough heifer calves for their replacements selling the balance at the weaner fairs. We have mated these heifers to easy calving yearling bulls. They will make great cows and their progeny will carry all the genes required for sustainable and efficient hill country production.

The mating Dates : **Heifers** November 20th **Cows** December 7th

We wish you well with your purchases and will follow your progress with a keen interest.

Regards,
David Giddings

Comments: Purchased at the Beef Expo for \$21,000 after being a standout bull at the Angus bull evaluation unit at Feilding. Crump is breeding consistently well and his progeny are ideally suited to the hill country. With his strong head and jaw, and masculine traits, he has proven to be very fertile with over 250 progeny at Meadowslea, as well as being used in the Australian Benchmarking programme and in the Beef&Lamb NZ progeny test in New Zealand. His daughters are outstanding, and proving to be very fertile, easy calving, and are breeding exceptionally well. You will note his outstanding daughters and grand-daughters in this sale, and he also features as a mating sire for some of the top cows.

Comments: He was the outstanding yearling of his year, out of a 2-year heifer, he weaned the heaviest in the whole herd. He continued on to the heaviest 400-day weight, and scanned with the biggest EMA and highest rib and rump fats, as well as having the largest scrotal size. He is passing all these attributes on to his progeny in a very consistent way, and his EBVs strongly reflect this. He ranks in the top 10% of the breed in the key maternal and fertility traits of calving ease, low birthweight, scrotal size, rib fat and rump fat. His daughters are rearing exceptional calves while staying in great order - this has pushed his milk figure into the top 1% of the breed! He is now a breed Trait leader for both Calving Ease and Milk. His progeny, like him, are thick, deep, exceptionally easy-doing and very early maturing. He has some outstanding daughters and grand-daughters in this sale as well as being the mate of some top selected cows.

Comments: G914 was retained in 2014 for his exceptional depth, thickness, and strong fertility traits. Now with over 110 progeny on the ground his figures are even more impressive. He is a trait leader for calving ease, in the top 5% for low birthweight, good scrotal size and the top 1% for rib and rump fat as well. He displays terrific muscle, and with his easy-doing attributes we think he is the ideal type to breed females that will perform in hill country. He features as a sire and mating sire in the catalogue.

Comments: This son of G914, out of a top Turihaua Crump heifer, was used as a yearling in 2015 and sold to Nimrod Downs in the 2016 bull sale. We purchased him back for last year's mating and believe he represents the future of hill country Angus cattle. Once again maternal and fertility traits feature strongly, with calving ease, low birthweight and scrotal size in the top 10 %, while his rib and rump fat EBVs are off the scale. His first progeny scanned so well his EMA has jumped from +2 to +5.9 and his first son sold topped the 2017 yearling sale at \$7500. We believe any high country farmer - and his bank manager - would love to have a herd of cows like this! He features as a sire and mating sire in the catalogue.

Comments: The top Goldwyn bull of his year, purchased for \$13,000. A son of the widely-used Te Mania Infinity, he is passing on good fertility traits with strong scrotal, positive fats, low birthweight as well as good IMF figures. He has a number of good daughters in the sale and was also used as a mating sire to follow up a lot of the cows in this sale.

Comments: He was retained in 2015 to ensure we maintain some Meadowslea 159 blood in the herd. Meadowslea 159 is still a trait leader for scrotal size and short days to calving, two of the most important fertility traits in Breedplan, his daughters are consequently some of the most productive in the herd. J479 also has strong fertility EBVs and is a larger-framed bull but still with tremendous depth of body and sound feet and legs. He was used to follow up on some of the sale cows.

Comments: We Retained this bull in the stud last year. His sire is Meadowslea J514, an F540 son sold for stud to Earnscleugh Station at \$17,000 in 2015 who also bred our top price bull last year to Murchison Angus at \$20000. L226 is out of a top young Turihaua Crump heifer. We mated him to a pick of top cows in the herd, including a number in this sale.

Comments: This bull was sold for the NZ on-farm record of \$100000 to Cricklewood Stud. We have used him in the AI programme and he has bred exceptionally well for us leaving deep bodied thick easy doing progeny. We have one R2yr daughter in the sale and have several other sale heifers mated to 2 of his outstanding yearling sons who will be standout Bulls in our up-coming witer sale.

Comments: We purchased this bull at the Beef Expo in 2017 after he had been in the Bull Evaluation Unit. He is out of a top E.T. cow at Turihaua and was used as a yearling. Beautifully sound bull with depth and thickness. He looks to be an exciting prospect and has been mated with some top sale cows.

Comments: The top F540 yearling with a strong pedigree. Dam a very good Glanworth 16 daughter who has bred a yearling sold to Red Oak Stud, Grandam great old cow lot 83 in this sale. Probably the best set of data we have ever had in a bull and he also scanned exceptionally well with the biggest EMA we have ever recorded. A real stud prospect and probably be retained in the stud !

Comments: A very good son of Rangatira 13-38 who sold for \$100000. Dam breeding very well with a bull to Pirie's last year at \$13000. Grandam is the Great old cow A330 who has bred so well for us. Very good fertility figures with calving ease and scrotal and fats in the top 5% for the breed. Tremendous performance with the top weaning wt followed by 3rd heaviest at 400 day and 600day (after being used). Scanned with the 3rd biggest EMA, and had the second biggest scrotal, all out of 190 bulls !

MEADOWSLEA
ANGUS & SHEEP GENETICS

Weigh scale revolutionizing Angus breeder's operation

David Giddings' family has been farming the high country in Fairlie since 1926. "We've been here forever", he says. Their Romney stud was established in 1926 and David established the Angus stud in 1985. Today their operation extends to 700ha with a total of 10,000 stock units comprising 500 Angus stud cows and 2,000 stud ewes.

Garnering a reputation in the industry as a top high country stock breeder, David says his success has in part been the result of identifying and incorporating the right technology into his operation. Technology that gives him information at his fingertips.

The latest 'gadget' is Tru-Test's XR5000 weigh scale.

Weighing and using the data to manage their sheep has been part of their farming practice for a long time.

Getting access to the equivalent cattle information however, is new to their operation.

"We were having to do all this EID work with sending our animals away and so upgraded our weighing and tracking kit to Tru-Test's XR5000 and XRS Stick Reader when we upgraded our yards," explains David.

"We had been looking to get some kind of hand held device which would give us information on the cattle and be compatible with the Angus breed

programme, HerdMaster."

Someone suggested to David that the XR5000 would do a lot of what they wanted.

"And it can! It's an unbelievable piece of kit."

"For cattle breeders not using this equipment, I am sure if they did and had the same information we now do, they would make different decisions on their breeding programmes. Decisions like which bull you put with which cow or if you sell it."

"We just carry it around with us now and it's got all this data on it. The memory capacity is phenomenal."

"You can see an animal, type their number in, and up comes all the information we want. Like what calf it

David Giddings

had this year, how heavy the calf was, who she's mated to, when she's in calf - early, late - just all that information."

"So, as well as weighing, the EID and the NAIT stuff, it's main use for us is doing the job of something like a tablet."

For David, it has changed what they can do as they now have so much information at their fingertips in the yard.

"We can just walk along with the stick reader on a race of cattle and we'll know which ones are pregnant, which ones calved to one particular bull etc. Basically, anything you want to find out about a particular animal, which is pretty amazing."

"It's revolutionized our operation, particularly with the likes of our first cow sale which we've just had".

“The XR5000 enabled us to track all our cows and progeny coming up to the sale. Whether these cows were going in the sale or whether they weren't. We could also tell types of cows, number, and knew who each had been mated to, first time and second time. We knew what calves each had, how heavy they were and who that calf was by, and how heavy that calf was.”

“Quite simply, we couldn't have done it without that piece of kit as we couldn't have carried all that info with us, and certainly couldn't have done it all in time”.

Their first auction went well with a new NZ record price set.

“Once you've loaded all the information in it can just tell you what you want to know, and it's telling that all on one screen, and all at the same time. So you can make the right decisions”.

“There's nothing else around that can do that!”

“You don't have to go back to the house or the office or look at bits of paper or through a pile of books.”

You just get it all programmed in there and just go!

“We've also been using it to mother up all the calves. We would have a group of cows and then want to find their calves. We would just go through the list of calves and up popped all the ones we needed. It meant we could go out and put them back with their mother in a completely different mob to where they were”.

They have also used it for mating their cows.

“When the first cow is in front of us we would have all her information on screen. We also have a pop up screen with 9 different sires on it. We would select one and that would be her mate. The next time she comes in the yard we will have all her previous mates, including what we did the last time. We can then choose to change her to a new mate if we want. We've got a record of all that.”

“It just does away with thousands of bits of paper.”

“You're also making decisions on all that info, not just part, which you would normally have done in the past. As a result, the accuracy of those decisions will be far better.”

“For cattle breeders not using this equipment, I am sure if they did and had the same information we now do, they would make different decisions on their breeding programmes. Decisions like which bull you put with which cow or if you sell it.”

“If more breeders use this equipment as a decision-making tool, well it's going to increase the performance of Angus herds across New Zealand.”

David is currently looking at getting a cow's lifetime data on the XR5000.

“We'll have the data right from calves she's ever had, what the weighting of

Comments: A very well bred Turihaua Crump daughter to lead off our 2017 female sale. Out of a top performing cow who bred the top priced bull last year L265 sold to Muchiston Angus at \$20000 (with Turihaua Stud the underbidder) and she has also produced another Stud bull H122. Nice balance of figures for hill country with moderate growth good scrotal and fats and a strong milk figure. Mated to yearling sons of Rangatira 13-38 (\$100000 bull) M429 and M452

THE TYPE THAT THRIVES IN OUR ENVIRONMENT

Visual appraisal is still very important for selecting cattle to perform in the Hill-Country

MASCULINE TRAITS - A strong head and jaw and thick neck indicate high levels of libido, testosterone and reproduction efficiency

NECK LENGTH - A thicker necked animal matures and reaches puberty earlier and has more libido

A longer neck indicates a higher maintenance animal that is slower to reach puberty and rebreed

HEART GIRTH - Large heart girth is an indicator of vigor and easy keeping ability

Small heart girth animals are more susceptible to stress, are higher maintenance and do not perform well on tussock

RIB FAT - Strong Rib Fat covers are the essential energy store for adverse conditions. They indicate easy doing and finishing ability and are directly related to increased fertility in both Heifers and Cows.

STRUCTURAL SOUNDNESS, FEET AND BONE - High country cattle cover large distances over rugged terrain so a strong skeleton is essential

HIDE - a good thick skin and coat is essential in the cold harsh environment

FLANK - Deep flanked animals are easier keeping, have more meat in the rump and have more maternal and reproductive efficiency

Higher flanked animals tend to be flighty, are higher maintenance and take longer to finish on grass

BRED FOR THE HILL COUNTRY

The development of the “Meadowslea Hill Country Type” has been the result of 25 years of selecting animals that perform the best in our hash hill country environment. Cows that can winter easily on the hill without supplements, stay in good order, calve easily and get back in calf early every year for 10 years has been the focus of our breeding programme.

By putting pressure on cows to winter on native hill blocks it quickly became apparent that some animals could manage well in this environment and would easily get back in calf the next year, while those that struggled would be too light going to the bull, and either calve later each year, or come through dry.”

Those that were dry or were not holding their condition well enough were removed from the stud herd, while the “easy-doing” types that thrived, passed their genetics on to the next generation. It soon became clear that it was the cows with good fat covers going in to the winter that were consistently performing the best in our environment.

With the introduction of Ultra-Sound scanning for Rib and Rump Fat we discovered the Meadowslea herd had positive fat EBV's that were at the very top of the range for the breed in Australasia.

These great positive fat EBV's in the Meadowslea herd have come about simply by selecting animals that suit the Hill Country environment.

Rib Fat (mm)

Graph showing improvement in fat EBVs at Meadowslea while running the herd on hill country, compared with Australasian average. From Angus Breedplan report May 2016.

■ Meadowslea herd
● Australasian herd average

The average rib fat EBV of the females in this catalogue ranks in the top 20% for the breed in Australasia.

Meadowslea Stud 2yr Heifers and their calves on high tussock.

Meadowslea Stud cows and calves come off the hill for weaning

Meadowslea Stud cows after weaning - job done for another year!

Comments: A very smart F540 daughter out of a very good old cow (lot 98) producing 11 in 11 - 6 sale bulls including a Stud to Earnsleugh at \$10000. Exceptional maternal and fertility figures with calving ease, low birth wt, scrotal size, days to calving and fats all in the top 20% for the breed. Mated to KJ Freedom I 36 sons - M525 and M565

51%	32%	54%	54%	61%	59%	54%	52%

Comments: A great easy doing heifer to lead off the R3yr offering. L163 is a Matauri Reality Granddaughter with the exceptional fertility and maternal traits this sire is known for. Scanned very well with top fat figures in the group and that puts her in the top 1% of the breed and she had good marbling at 5.2. With calving ease in the top 10% of the breed she is exactly the type that suits our environment. Should be a top mate to Turihaua Crump followed by K703

Comments: A very well balanced classic Turihaua Crump type that has proven so productive for us in the hill country environment. A good pedigree being out of a good old cow that has produced 7 in 7 including a Stud Bull to Hillcroft at \$9000 bred the same way. An exciting mate to our new sire Turihaua Loyalty purchased at the beef expo for \$13000.

Comments: Another top heifer here by J514 who was used as a yearling and then sold for the top price of his year to Earnsleugh Stn. Out of a top Turihaua Crump daughter this is a great cross and the same as our retained sire lasr year L226. Top performance here - she weaned the heaviest of the group and continued on to be the heaviest at the 400 day and scan with the biggest EMA. Her scrotal milk and fat figures are all in the top 10% for the breed and she has just reared a very good bull calf. Should be an exciting mate to the new sire Turihaua Loyalty.

Comments: By J558 a good Turihaua yearling we used and was later sold to Greg Hand. Dam D081 is a top old cow in this sale lot 92 8 in 8. L072 is a good moderate framed heifer with good fertility traits with strong scrotal and short days to calving in the top 10% for the breed and with good strong fats. Mated to G914

Comments: By the Turihau Crump son H202 who bred so many of the top sale bulls last year and out of a cow by the great old Meadowslea 70 bull. Her dam has bred 2 very good sale bulls to Island Bay and Melrose Stn. L078 is a solid deep bodied heifer with strong fertility traits - scrotal and fats it the top 20% of the breed once again. Exciting mate to the new sire Turihaua Loyalty

Comments: By a F540 grandson we used as a yearling and sold to M Mackenzie \$10500. Line bred here being out of a F540 daughter she shows all the F540 attributes with good top and strong hindquarter. She has very good numbers with good calving ease, top scrotal and milk. She scanned with good muscle, top fats in the top 5% of the breed and plenty of marbling at 6. She has just weaned a very good bull calf. Should be a great mate to Turihaua Crump who always crosses so well with the F540 bloodlines

Comments: A Deep thick Turihaua Crump Granddaughter out of a cow by Floridale Yelet. She is breeding well with her first calf sold as the third yearling up in the spring sale to Rob Hobson at \$3500 and has just weaned another good bull calf again this year. Strong scrotal and fats . Expect a great mate to F540 who always breeds well over Crump daughters.

Comments: A deep bodied F540 daughter here out of a great old cow 11 in 11. K827 has all the attributes we expect from F540 with calving ease, low birth weight and fats all at the top of the breed, while her milk figure at +21 puts her in the top 10% for the breed and shows in the good calves she has weaned to date. Mated to K811 followed by L256

Comments: A top easy doing well fleshed Yelet daughter to lead off the AD Cows. D072 has been one of our best performers and a favourite of her year. She has just weaned the heaviest calf in the herd by Meadowslea K890. She has a son who is one of the picks for the upcoming winter bull sale and has had 2 previous top sale bulls including a top yearling to Kydell Downs at \$5000. Very good fertility figures as you would expect with days to calving, scrotal and Rib and Rump fats all strong. A good milk figure generated by the top calves she has weaned. Mated to Turihaua Crump must be a real prospect for another top calf followed by K703. Photo front cover.

Comments: Thick deep cow here producing 8 in 8 including 4 sale bulls and 1 daughter retained. Calving ease with good muscle and fats. Scanned with the top marbling figure of 7 and the biggest EMA in the old cows. Exciting mate here AI to Meadowslea L265 the top price at last years bull sale \$20000 to Merchiston Angus, then followed by 2 sons of Rangatira 13-38

LOOKING FOR GENUINE HILL COUNTRY ANGUS?

“Buy from the specialists”

MEADOWSLEA ANGUS

THE TYPE THAT THRIVES IN OUR ENVIRONMENT

Visual appraisal is still very important for selecting cattle to perform in the Hill-Country

MASCULINE TRAITS - A strong head and jaw and thick neck indicate high levels of libido, testosterone and reproduction efficiency

NECK LENGTH - A thicker necked animal matures and reaches puberty earlier and has more libido

A longer neck indicates a higher maintenance animal that is slower to reach puberty and rebreed

HEART GIRTH - Large heart girth is an indicator of vigor and easy keeping ability

Small heart girth animals are more susceptible to stress, are higher maintenance and do not perform well on tussock

RIB FAT - Strong Rib Fat covers are the essential energy store for adverse conditions. They indicate easy doing and finishing ability and are directly related to increased fertility in both Heifers and Cows.

STRUCTURAL SOUNDNESS, FEET AND BONE - High country cattle cover large distances over rugged terrain so a strong skeleton is essential

HIDE - a good thick skin and coat is essential in the cold harsh environment

FLANK - Deep flanked animals are easier keeping, have more meat in the rump and have more maternal and reproductive efficiency

Higher flanked animals tend to be flighty, are higher maintenance and take longer to finish on grass

DAVID GIDDINGS

70 HILL COUNTRY BULLS SELL
Friday June 22, 2018
on farm - Fairlie

Our 2 Proven Senior sires now aged 8 and 9 exhibit all the soundness and longevity so important in Hill-Country - their Progeny will again feature strongly in the 2018 catalogues

MEADOWSLEA F540 - Deep thick easy doing Sire with exceptional production figures for Hill Country - he ranks in the top 10% of the breed for the important Maternal traits of Calving Ease, Low birth weight, Short Gestation, Scrotal size and Rib and Rump Fat. His milk figure of +30 ranks in the top 1% for the breed.

TURIHAUA CRUMP E5 Traditional NZ Angus Hill Country type. Over 300 outstanding progeny always sought after. His young daughters are proving exceptionally fertile and productive in our hill country.

WE'VE MADE BULLS MORE ATTRACTIVE.

**14 days
FREE
cover**

**6.5%
for 12
months**

The handsome beasts in this catalogue will look even more appealing on sale day, thanks to FMG – the country's leading rural insurer. With 14 days free Premier Bull Cover, they'll be automatically insured from the fall of the hammer, including their transit to the farm. And you can keep that cover going for the remaining 12 months for just 6.5% of the purchase price, for bulls up to the value of \$25,000. So don't miss this chance to buy bulls covered by FMG. It's a mighty attractive offer.

Please note this is only a summary of FMG products and services and is subject to our specific product documentation. For full details, refer to the relevant policy wordings at fmg.co.nz

We're here for the good of the country.

PROVEN TO PERFORM IN A TOUGH TESTING GROUND

Meadowslea stud cows live in a different world to most Angus Stud cows in NZ, and have naturally developed into a type that thrives in their environment. Moderate framed cows that have deep wide bodies and carry good fat covers are proven to be the most productive in this country. The use of strong NZ bloodlines ensures this suitability for the environment will continue.

Widespread use of imported bulls from different environments, or genetics sourced from grain fed systems, have no place in the Meadowslea breeding programme.

It is no surprise then that Meadowslea bulls shift and perform for clients in hill country throughout NZ.

PROVEN WHERE IT COUNTS!

The Mackenzie Basin Calf Sale in Temuka is the largest sale of Angus and Angus-Cross calves in the South Island.

It is the best day of the year for Meadowslea Angus watching our Clients Calves come through the Ring. This year there were almost 1200 calves from our Clients properties and they were in strong demand particularly the heifers which were strongly sought after for breeding. We were thrilled to be able to buy some of these top heifers for our next year's female sale.

A big congratulations to all our clients for a marvellous line of Angus and Angus x Calves all displaying those

easy doing and fleshy attributes that our genetics are noted for.

Leading Sales: Top Price of the day to Grampians Station with their Angus x Steers at \$1305 and the Angus x Heifers at \$1160. Grays Hills topped the Angus section with Steers at \$1270 while their heifers topped at \$1030 with the 2nd line purchased by Meadowslea Angus. Mt Gerald Station steers to \$1185 and heifers to \$915. Braemar Station steers to \$1065 and heifers to \$930 purchased by Meadowslea Angus. Horwell Downs steers to \$1045 and heifers to \$840 purchased by Meadowslea Angus.
